Physics of Amphiphilic Layers Jacques Meunier, Dominique Langevin, Nino Boccarda, 2012-12-06 Amphiphilic layers play essential roles in the behaviour of a great variety of disperse systems such as micelles microemulsions and vesicles They can also exist as isolated mono or bilayers or constitute extended liquid crystalline structures Although the properties of these different systems may at first sight seem unrelated theoretical interpretations of them depend on several common concepts This was the reason for bringing together scientists working in this area for the International Winter School on the Physics of Amphiphilic Layers which was held at Les Houches 10-18 February 1987 The topics treated in the proceedings volume are mono and bilayers interactive forces between layers with special emphasis on steric forces ordered structures in particular swollen lamellar phases and defects vesicles micelles including polymer like systems microemulsions especially random bicontinuous structures and porous media The importance of thermal fluctuations in the amphiphilic layers is stressed Recent results are presented and literature references allow readers not familiar with the subject to find any background information they require

Magnetic Excitations and Fluctuations II Umberto Balucani, Stephen W. Lovesey, Mario G. Rasetti, Valerio Tognetti, 2012-12-06 An international workshop on Elementary Excitations and Fluctuations in Magnetic Systems was held in Turin for five days beginning 25 May 1987 The workshop followed much the same format as the one with the same title held in San Miniato in 1984 proceedings Springer Series in Solid State Sciences Vol 54 that most participants contributed talks and provided papers for the proceedings While many of the participants had attended the first workshop 15 of the 40 invited review papers were presented by scientists who had not The majority of the talks reported theoretical work concerned with the introduction of new techniques However experimental work was also well represented not least because many of the reported theoretical studies were motivated by experimental findings and a highlight of the workshop was an extremely stimulating session devoted to recent neutron scattering measurements on various systems that exploited polarization analysis The fine venue of the workshop Villa Gualino with its excellent facilities and spacious accommodation helped to produce a delightful relaxed and friendly atmosphere For the use of Villa Gualino and significant financial support we are indebted to our host organization the Institute for Scientific Interchange ISI Additional financial support came from the Consiglio Nazionale delle Ricerche CNR Centro Interuniversitario di Struttura della Materia del Ministero della Pubblica Istruzione CISM MPI and Gruppo Nazionale di Struttura della Materia GNSM CNR

Semiconductor Interfaces: Formation and Properties Guy LeLay, Jacques Derrien, Nino Boccarda, 2012-12-06 The trend towards miniaturisation of microelectronic devices and the search for exotic new optoelectronic devices based on multilayers confer a crucial role on semiconductor interfaces Great advances have recently been achieved in the elaboration of new thin film materials and in the characterization of their interfacial properties down to the atomic scale thanks to the development of sophisticated new techniques This book is a collection of lectures that were given at the International Winter

School on Semiconductor Interfaces Formation and Properties held at the Centre de Physique des Rouches from 24 February to 6 March 1987 The aim of this Winter School was to present a comprehensive review of this field in particular of the materials and methods and to formulate recommendations for future research The following topics are treated i Interface formation The key aspects of molecular beam epitaxy are emphasized as well as the fabrication of artificially layered structures strained layer superlattices and the tailoring of abrupt doping profiles ii Fine characterization down to the atomic scale using recently developed powerful techniques such as scanning tunneling microscopy high resolution transmission electron microscopy glancing incidence x ray diffraction x ray standing waves surface extended x ray absorption fine structure and surface extended energy loss fine structure iii Specific physical properties of the interfaces and their prospective applications in devices We wish to thank warmly all the lecturers and participants as well as the organizing committee who made this Winter School a success
