Physiological Senescence and Its Postponement Walter Pierpaoli, N. Fabris, 1991 *Physiological Senescence and Its Postponement* Walter Pierpaoli, N. Fabris, 1991 *Journal of the National Cancer Institute*, 1992 Each issue is packed with extensive news about important cancer related science policy politics and people Plus there are editorials and reviews by experts in the field book reviews and commentary on timely topics Mobility and Proximity in Biological Membranes S. Damjanovich, 2018-01-18 Cell surface membranes have long been characterized as two dimensional fluids whose mobile components are randomized by diffusion in the plane of the membrane bilayer Recent research has indicated that cell surface membranes are highly organized and ordered and that important functional units of membranes appear as arrays of interacting molecules rather than as single freely diffusing molecules Mobility and Proximity in Biological Membranes provides an overview of the results obtained from biophysical methods for probing the organization of cell surface membranes These results are presented in the context of detailed treatments of the theory and the technical demands of each of the methods The book describes a versatile and easily applied mode for investigating molecular proximities in plasma membranes in a flow cytometer Its analysis of lipid fluidity and viscosity of membranes and the rotational mobility of proteins offers intimate insight into the physical chemistry of biological membranes The electrophysiology of lymphocytes is presented with focus on its importance in different diseases New techniques are described and new data new possibilities and future trends are presented by world experts This book s chapters can serve both as guides to the existing literature and as starting points for new experiments and approaches associated with problems in membrane function **The Melatonin Miracle** Walter Pierpaoli, 1996-03 In this book two of the world s leading medical researchers explains how melatonin works It already prevents jet lag and research suggests it controls the aging process fights disease boosts the immune system lowers cholesterol relieves stress Oxygen, Nitrogen and Sulfur Species in Post-Harvest Physiology of Horticultural Crops Vasileios Ziogas, Francisco J. Corpas, 2023-11-01 Oxygen Nitrogen and Sulfur Species in Post harvest Physiology of Horticultural Crops a volume in the Plant Gasotransmitter series analyzes the latest advances in post harvest physiology The book presents metabolic cascades and highlights the role of gasotransmitters as intercellular regulators of metabolic processes Post harvest physiology differs between climacteric and non climacteric fruits and vegetables as well as for fresh cut flowers and non food plants Initial chapters review the cascades intercellular pathways and messenger molecules that drive ripeness and longevity presenting the chemistry behind key pathways The books also takes a deep dive into core gasotransmitters describing the data behind known properties chemistry and physiological roles Applications for prolonging shelf life via the control of post harvest fungi bacteria and omics approaches are reviewed in detail offering readers guidance on how to put gasotransmitters research into practice This is an essential resource for students researchers and agronomists interested in plant physiology biochemistry and plant hormones Describes the use and application of oxygen nitrogen and

sulfur species towards the prolonging of post harvest shelf life in agricultural products Explores eco friendly alternatives to hazardous chemical compounds used to preserve fruits Presents metabolic cascades and evaluates the crosstalk and interaction of gasotransmitters within these cascades *Evolutionary Biology of Aging* Michael R. Rose,1994-10-27 This unique book looks at the biology of aging from a fundamentally new perspective one based on evolutionary theory rather than traditional concepts which emphasize molecular and cellular processes The basis for this approach lies in the fact that natural selection as a powerful determining force tends to decline in importance with age Many of the characteristics we associate with aging the author argues are more the result of this decline than any mechanical imperative contained within organic structures This theory in turn yields the most fruitful avenues for seeking answers to the problem of aging and should be recognized as the intellectual core of gerontology and the foundation for future research The author ably surveys the vast literature on aging presenting mathematical experimental and comparative findings to illustrate and support the central thesis The result is the first complete synthesis of this vital field Evolutionary biologists gerontologists and all those concerned with the science of aging will find it a stimulating strongly argued account **Handbook of Stem Cells,**

Cutler,L. Packer,J. Bertram,A. Mori,2012-12-06 Oxidative stress and aging Over the past several years there has been an extraordinarily rapid growth in our knowledge of free radical chemistry and its possible involvement in both normal

essential biology and age related disease and dysfunction Much of this growth in the traditionally separate sciences of chemistry and molecular gerontology occurred independently with little interaction or communication between the scientists working in these two fields In view of the growing maturity of the two fields and the potential importance of advancing our knowledge in the area of oxidative stress and aging we perceived a critical need to organize an international conference the First International Conference on Oxidative Stress and Aging in Hawaii in 1994 to bring together the world's leading scientists in the fields of reactive oxygen species and molecular gerontology The objective of this conference was to provide a unique opportunity for scholars working in these two related and rapidly growing fields to participate in the exchange integration and synthesis of new concepts and ideas to engage in constructive criticism and to initiate new collaborative research projects The conference focused on the molecular and cellular aspects of aging as related to oxidative stress It was one of the largest and most comprehensive international conferences held in molecular gerontology At this conference a call was made for submission of papers to be used in the publication of a book covering the major contributions of the meeting

Methuselah Flies: A Case Study In The Evolution Of Aging Michael Robertson Rose, Hardip B Passananti, Margarida Matos, 2004-06-14 Methuselah Flies presents a trailblazing project on the biology of aging It describes research on the first organisms to have their lifespan increased and their aging slowed by hereditary manipulation These organisms are fruit flies from the species *Drosophila melanogaster* the great workhorse of genetics Michael Rose and his colleagues have been able to double the lifespan of these insects and improved their health in numerous respects as well The study of these flies with postponed aging is one of the best means we have of understanding and ultimately achieving the postponement of aging in humans As such the carefully presented detail of this book will be of value to research devoted to the understanding and control of aging Methuselah Flies is a tightly edited distillation of twenty years of work by many scientists contains the original publications regarding the longer lived fruit flies offers commentaries on each of the topics covered new short essays that put the individual research papers in a wider context gives full access to the original data captures the scientific significance of postponed aging for a wide academic audience

Natural Autoantibodies Yehuda Shoenfeld, David A. Isenberg, 1992-12-07 Natural Autoantibodies provides an in depth analysis of all aspects of natural antibodies The book examines the advantages and pitfalls of every type of technique that is widely used for detecting autoantibodies It also covers the sequencing of human autoantibody genes discussing how sequencing is undertaken and the genetic clues available to elucidate the genetic origins of autoimmunity Animal models of autoimmunity are also covered and the up to date account provided in this book explains how natural autoantibodies have important regulatory functions and also occasionally serve as templates for autoimmunity Other topics examined in Natural Autoantibodies Their Physiological Role and Regulatory Significance include idiotypes of natural autoantibodies the pathogenic role of natural autoantibodies and methods to measure the effects of genetic and sex hormones as well as aging on natural autoantibodies The book will be an excellent

Harrison,1990-08-09 This volume provides background knowledge useful to those setting out to do genetic studies of aging in mammals and raises vital questions How many genes are important in mammalian aging What are the optimal methods for their study To what degree are patterns of aging and patterns of growth and development part of the same process Do patterns of development predict subsequent patterns of growth and aging Are there a few fundamental aging processes or does every biological system age The rapid rate of progress in this field required a new volume with a new approach based on the combination of classical genetics and the powerful new tools of molecular genetics Although mammalian systems are emphasized representatives of the advanced genetic studies in Drosophila and other model systems are included The purpose is to enrich and stimulate genetic studies of mammalian aging by suggesting and evaluating future possibilities Conceptual Breakthroughs in The Evolutionary Biology of Aging Kenneth R. Arnold,Michael R. Rose,2023-07-10 Conceptual Breakthroughs in the Evolutionary Biology of Aging continues the innovative Conceptual Breakthroughs series by providing a comprehensive outline of the major breakthroughs that built the evolutionary biology of aging as a leading scientific field Following the evolutionary study of aging from its humble origins to the present the book s chapters treat the field s breakthroughs one at a time Users will find a concise and accessible analysis of the science of aging viewed through an evolutionary lens Building upon widely cited studies conducted by author Michael Rose this book covers 30 subsequent years of growth and development within the field The book highlights key publications for those who are not experts in the field providing an important resource for researchers Given the prevailing interest in changing the aging process dramatically it is a powerful tool for readers who have a vested interest in understanding its causes and future control measures Reviews cell molecular theories of aging in the light of evolutionary biology Offers an evolutionary analysis of prospects for mitigating aging not commonly discussed within private and public sectors Provides readers with a radically different perspective on contemporary biological gerontology specifically through the lens of evolutionary biology **Biodemography of Aging** Anatoliy I. Yashin,Eric Stallard,Kenneth C. Land,2016-08-22 This volume is a critical exposition of the data and analyses from a full decade of rigorous research into how age related changes at the individual level along with other factors contribute to morbidity disability and mortality risks at the broader population level After summarizing the state of our knowledge in the field individual chapters offer enlightening discussion on a range of key topics such as age trajectory analysis in select and general populations incidence age patterns of major chronic illnesses and indices of cumulative deficits and their use in

characterizing and understanding the detailed properties of individual aging The book features comprehensive statistical analyses of unique longitudinal data sets including the unique resource of the Framingham Heart Study with its more than 60 years of follow up Culminating in penetrating conclusions about the insights gained from the work involved this book adds much to our understanding of the links between aging and human health *Human Senescence* Douglas E.

Crews,2003-12-11 Much research on the biology of senescence is on cell lines nematodes or fruit flies that are only of peripheral relevance to the problems encountered in humans Human Senescence is a text which reviews the evolutionary biology of human senescence and life span and the evolutionarily recent development of late life survival It examines how human patterns of and variability in growth and development have altered later life survival probabilities and competencies and how survival during mid life contributes to senescent dysfunction and alteration Discussing possibilities of further extending human life span it gives a better understanding of how humans came to senesce as slowly as we do over our lifespan Bringing together gerontological anthropological and biocultural research it explores human variation in chronic disease senescence and life span as outcomes of early life adaptation and the success of humankind s sociocultural evolution It is a benchmark publication for all interested in how and why we age **Aging** Paulo J. Oliveira,Joao O. Malva,2022-09-22 Aging From Fundamental Biology to Societal Impact examines the interconnection of the cellular and molecular basis of aging and societal based challenges and innovative interventions Sections take a societal based angle on aging describing several flagship initiatives for healthy living and active aging in different regions cover the biology of aging which includes the hallmarks of aging explain the pathophysiology of aging describing different comorbidities associated with aging and possible interventions to decrease the impact of aging and envision future and innovative measures to tackle aging related morbidities Contributions from an interdisciplinary panel of experts cover such topics as the biology of aging to physical activity nutrition psychology pharmacology health care social care and urban planning Provides a cross disciplinary approach to aging at both the biological and societal level Highlights frontline scientific knowledge in the biology of aging and its translation into societal interventions Offers insights on the value of aging research and its future impact from a fundamental and translation point of view *Handbook of Stem Cells* Robert Paul Lanza,2004 Accompanying CD ROM in v 2 has image collections which can be saved in PowerPoint or HTML Current Catalog National Library of Medicine (U.S.),1992
