Bambara,Paul R. Allen,1995 Coverage ranges from the basics to building full scale systems Readers are shown step by step how to design an application and set up the PowerBuilder development environment create a window menu interface build windows menus and data windows debug and refine code build common functions and user objects distribute applications and use Powerbuilder for database administration *Building Client/Server Applications Using TUXEDO?* Carl Hall,1996-02-16 Novell s Tuxedo provides the tools users need to develop cost effective high performance client server applications especially in large and complex environments Now this book shows how to suit it up It presents an overview of transaction processing principles plus programming examples Case studies are also included

How to Deliver Client/server Applications that Work Alex Bakman,1995 This book focuses on the needs of a project leader or a technical architect who is responsible for turning the vision of the executive into a successful client server system Unlike current books which are either written for senior management responsible for strategy or for programmers who need low level programming details this is a practical and concise how to guide and a roadmap for the process which will successfully deliver client server applications It leads the project leader through all the stages of the life cycle from conceptualization to system development and deployment *How to Deliver Client Server Applications That Work* offers practical proven advice on the business and technical issues that a project leader must deal with effectively Developing Enterprise Applications with PowerBuilder 6.0 Blair Taylor,1997-10 These pages provide the reader with the developer tips and techniques needed to develop an enterprise client server system using the software one of the market leaders in client server development applications The book is authored and co authored by PowerBuilder experts **Software Maintenance**

- A Management Perspective Phaneendra Nath Vellanky,2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and

software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
