

X-ray Radiography Principle

- X-rays are produced when a high speed moving electron get collided with nucleus of an atom X-rays are produced in a X-ray tube which consist of a glass or ceramic envelope containing anode a positively charged electrode and cathode a negatively charged electrode, evacuated to an ultra high vacuum of 10^{-9} hector pascal.
- Cathode act as a producer of electrons, when electrical tension setup between cathode and anode, these electrons are attracted by anode and get accelerated up.
- These electrons from cathode are concentrated into a beam by a focussing cup and when these electrons get collided with anode, a part of their energy is transformed into X-radiation called as X-rays.
