Model Systems In Biological Psychiatry:

Model Systems in Biology Georg Striedter, 2022-08-23 How biomedical research using various animal species and in vitro cellular systems has resulted in both major successes and translational failure In Model Systems in Biology comparative neurobiologist Georg Striedter examines how biomedical researchers have used animal species and in vitro cellular systems to understand and develop treatments for human diseases ranging from cancer and polio to Alzheimer's disease and schizophrenia Although there have been some major successes much of this translational research on model systems has failed to generalize to humans Striedter explores the history of such research focusing on the models used and considering the question of model selection from a variety of perspectives the philosophical the historical and that of practicing biologists Striedter reviews some philosophical concepts and ethical issues including concerns over animal suffering and the compromises that result He traces the history of the most widely used animal and in vitro models describing how they compete with one another in a changing ecosystem of models He examines how therapies for bacterial and viral infections cancer cardiovascular diseases and neurological disorders have been developed using animal and cell culture models and how research into these diseases has both taken advantage of and been hindered by model system differences Finally Striedter argues for a big tent biology in which a diverse set of models and research strategies can coexist productively

Model Systems in Biological Psychiatry David Ingle, Harvey M. Shein, 1975 Systems Biology in Psychiatric Research Felix Tretter, Georg Winterer, Peter J. Gebicke-Haerter, Eduardo R. Mendoza, 2010-03-30 This first book to provide a comprehensive overview of the recent progress made in this breakthrough approach includes expert contributions from a variety of disciplines Particular focus is placed on high throughput methods and the analysis of data thus obtained as well as their use in silico experiments so as to gain an insight into the complex biological processes in neuronal systems A must have for everyone working in psychiatric research **Models of Mental Disorders** William T. McKinney Jr., 2012-12-06 My ideas for this book have been evolving over the last several years as I have been working in the animal modeling area and have seen it change rather dramatically There have been tremendous advances both in methodology and in conceptualization yet the literature is scattered in journals encompassing many disciplines In particular there have been only very limited attempts to write about the philosophical conceptual and controversial issues in this field to pull together diverse findings and to provide some general perspective on its future As will probably be apparent I am a clinical psychiatrist who also has a fundamental interest in animal behavior especially primate social behavior I entered the field from a clinical research standpoint to develop some animal models of depression after being stimulated to do so by Dr William Bunney then at the National Institute of Mental Health and now at the University of California Irvine The field has grown rapidly since then and there is considerable research activity Indeed the research activity has grown more rapidly than our conceptualization of what animal models are and are not Animal preparations are now available for studying specific aspects of certain types of

psychopathology Thoughtful workers in the animal modeling field no longer talk about comprehensive models but rather about more limited experimental preparations in animals for studying certain specific aspects of human psychopathology

The Biology of mental disorders. , *Eyeblink Conditioning in Psychiatric Conditions - State of the Field and Future Directions* Tracy L. Greer, Lucien T. Thompson, 2017-09-22 Eyeblink classical conditioning EBC is a model paradigm for associative also termed Pavlovian learning one of the simplest and best understood forms of learning and memory Because EBC paradigms are readily adapted across species the neural substrates of EBC have been well characterized and include but are not limited to the cerebellum and anterior interpositus nucleus the hippocampus and prefrontal cortices The ability to collect EBC data across many different species i e including but not limited to humans also has the distinct advantage of facilitating translational research and therefore may be of particular benefit to elucidate mechanistic changes associated with a wide variety of psychiatric disorders In fact EBC paradigms have been employed to assess individuals with a wide range of neurological deficits including Korsakoff s amnesia Alzheimer s disease as well as normal aging dyslexia inflammatory tremor dystonia and multiple sclerosis and psychiatric disorders including major depressive disorder anxiety disorders schizophrenia autism and alcohol use addiction disorders Individuals with these disorders exhibit differential impairments across different EBC task types e g delay vs trace EBC with some showing impairment in one but not the other task and some showing impairments in both across learning stage e g acquisition discrimination or extinction and across response variables e g magnitude and timing of the conditioned eyeblink motor response modality of the conditioned stimulus Evaluating specific individual differences in the context of variable brain pathology should aid characterization and refinement of our understanding of complex neuropsychiatric disorders The field of psychiatry has seen a transition from more traditional use of symptom clusters to define psychiatric disorders with subsequent examination of associated behaviors and traits to the use of physiological and behavioral indicators to characterize individuals with respect to various psychological domains in line with the National Institute of Mental Health Research Domain Criteria RDoC initiative This approach employs a neuroscience based framework to assess the pathophysiology of chronic mental illnesses Behavioral and cognitive processes are critical domains of interest in evaluating potential maladaptive patterns that may be indicative of specific psychopathologies Furthermore the rapid development of technological advances that allow for more detailed examination e g EEG MEG MRI fMRI infrared imaging and manipulation e g transcranial magnetic and direct current stimulation of brain functions should enhance our ability to better characterize EBC performance and its utility in characterizing aspects of particular neuropathologies Substantial research evidence exists for the value of EBC paradigms to inform our understanding of the pathophysiology underlying a wide variety of neurological and psychiatric disorders Despite these findings this readily implemented classic cognitive behavioral paradigm is relatively underutilized in clinical settings This e book highlights recent convergence of clinical and research efforts in this area and aims to promote a

resurgent interest in eyeblink classical conditioning and to emphasize the potential for future translational and diagnostic applications of EBC in combination with other techniques to strengthen our understanding of alterations in brain function manifested in behaviors characteristic of specific psychopathologies **Re-Visioning Psychiatry** Laurence J.

Kirmayer, Robert Lemelson, Constance A. Cummings, 2015-07-29 *Re-Visioning Psychiatry* explores new theories and models from cultural psychiatry and psychology philosophy neuroscience and anthropology that clarify how mental health problems emerge in specific contexts and points toward future integration of these perspectives Taken together the contributions point to the need for fundamental shifts in psychiatric theory and practice Restoring phenomenology to its rightful place in research and practice Advancing the social and cultural neuroscience of brain person environment systems over time and across social contexts Understanding how self awareness interpersonal interactions and larger social processes give rise to vicious circles that constitute mental health problems Locating efforts to help and heal within the local and global social economic and political contexts that influence how we frame problems and imagine solutions In advancing ecosystemic models of mental disorders contributors challenge reductionistic models and culture bound perspectives and highlight possibilities for a more transdisciplinary integrated approach to research mental health policy and clinical practice

Neuroproteomics as a Tool for Understanding Schizophrenia Daniel Martins-de-Souza, 2022-08-05 Over the past decade neuroproteomics has shed light on the molecular features of schizophrenia by depicting biological processes involved with its establishment maintenance and treatment These studies have also pointed to potential biomarkers applicable to diagnosis and medication monitoring Edited by a leader in the field of neuroproteomics with contributions from subject experts this new volume will address recent findings and compile evidence from difference perspectives such as human samples animal models pluripotent stem cell derived in vitro pre clinical models and provide findings to inform the development of innovative future treatment strategies This volume will be useful for a broad audience of researchers and professionals including biologists neurologists psychiatrists analytical chemists and pharmacists among others Animal Models of Depression KOOB, EHLERS, KUPFER, 2012-12-06 Animal models represent experimental investigations developed in one species for the purpose of studying phenomena in another species and provide numerous advantages for preclinical research They allow scientists greater control and isolation of important experimental variables Animal models are safe reproducible strategies by which to evaluate and design new pharmacological treatment strategies while also allowing direct central nervous system intervention to alter the course of the aberrant behavior Animal models have been developed for a number of mental illnesses in this particular domain they hold the promise to shed light on the still obscure etiologies of these illnesses and ultimately to facilitate the development and testing of cures Yet true models of mental illness are difficult to develop because mental illness may be a uniquely human phenomenon It was based on these considerations that the MacArthur Foundation Research

Network on the Psychobiology of Depression set out to sponsor a conference to review the status problems promises and relevance of animal models to the clinical conditions of affective disorders The conference was held in September 1986 and included participants from both within the Network as well as scientists and scholars from various disciplines relevant to the concerns of the conference After the conference was held it became clear to the organizers that the material presented could be helpful to a broader field of investigators since a significant portion of the information has not been presented elsewhere or in the unified context of a monograph
