Modeling Spatial and Economic Impacts of Disasters Yasuhide Okuyama,Stephanie E. Chang,2004-05-18 This book brings together a collection of innovative papers on strategies for analyzing the spatial and economic impacts of disasters Natural and human induced disasters pose several challenges for conventional modeling For example disasters entail complex linkages between the natural built and socio economic environments They often create chaos and economic disequilibrium and can also cause unexpected long term structural changes Dynamic interactions among agents and behavioral adjustments in a disaster become complicated The papers in this volume make notable progress in tackling these challenges through refinements of conventional methods as well as new modeling frameworks and multidisciplinary integrative strategies The papers also provide case study applications that afford new insights on disaster processes and loss reduction strategies

Methodologies for disaster risk management includes a study on cost benefit analysis of coastal protections in New Orleans and one on early warning systems in developing countries The next section outlines decision making in disaster risk management including robust decision making No regret and No risk strategies and strategies that reduce time horizons for decision making Among the conclusions is the assertion that risk management policies must recognize the benefits of risk taking and avoid suppressing it entirely The main message is that a combination of disaster risk reduction resilience building and adaptation policies can yield large potential gains and synergies

Hurricanes and Climate Change James B. Elsner, Thomas H. Jagger, 2010-01-23 Recent studies suggest that tropical cyclones are more powerful than in the past with the most dramatic increase in the North Atlantic The increase is correlated with an increase in ocean temperature A debate concerns the nature of these increases with some scientists attributing them to a natural climate fluctuation and others suggesting climate change related to anthropogenic increases in forcing from greenhouse gases A Summit on Hurricanes and Climate Change was held during the spring of 2007 on the island of Crete that brought together leading academics and researchers on both sides of the scientific debate to discuss new research and express opinions about what will happen in the future with regard to hurricane activity This proceedings volume highlights the state of the science research into various aspects of the hurricane climate connection It is likely that the science presented here will lead to new research that will help answer crucial questions about our sustainable future

The Oxford Handbook of Urban Economics and Planning Nancy Brooks, Kieran Donaghy, Gerrit-Jan Knaap, 2012-01-12 This volume embodies a problem driven and theoretically informed approach to bridging frontier research in urban economics and urban regional planning The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship Although economists were among the early contributors to the literature on urban planning many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions equity over efficiency and normative prescriptions over positive analysis Planners meanwhile even as they draw upon economic principles often view the work of economists as abstract not sensitive to institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading

economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the efficient provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap the book highlights the best scholarship in planning and economics that address the most pressing urban problems of our day and stimulates further dialog between scholars in urban planning and urban economics
