Integrating Evidence into Practice for Impact, An Issue of Nursing Clinics of North America Debra Mark, 2014-09-28 This issue begins with an overview that distinguishes evidence based practice EBP and translation science followed by a description of Hawaii's statewide EBP program that uses active and multifaceted translation science strategies to facilitate the rate and extent of adoption of EBP changes With one exception the remaining articles describe individual EBP projects from five different health care facilities that used the Iowa Model to guide their work Each article includes an evidence summary a description of implementation strategies an evaluation of the innovation

and lessons learned These completed projects were initiated between 2009 and 2012 address a variety of topical nursing issues and for the most part focus on preventing complications ie blood sugar elevations increased lengths of stay extubation failures noise related injury pain surgical site infections pneumonia restraint use delirium and fever An additional article describes the use of evidence to inform simulation based learning a possible strategy for ensuring competencies in and compliance with EBP interventions Nursing leaders will come away with solid information about utilizing EBP to improve patient outcomes The Hawaii program demonstrates that health care quality can be realized by employing the best available evidence and empowering the nursing workforce It also offers a glimpse of the care that the future nursing workforce could provide to create a health system that provides accessible affordable and quality care to everyone in the United States

Information Control Problems in Manufacturing 2006 Alexandre Dolgui, Gerard Morel, Carlos Eduardo Pereira, 2007-04-18 Information Control Problems in Manufacturing 2006 contains the Proceedings of the 12th IFAC Symposium on Information Control Problems in Manufacturing INCOM 2006 This symposium took place in Saint Etienne France on May 17 19 2006 INCOM is a tri annual event of symposia series organized by IFAC and it is promoted by the IFAC Technical Committee on Manufacturing Plant Control The purpose of the symposium INCOM 2006 was to offer a forum to present the state of the art in international research and development work with special emphasis on the applications of optimisation methods automation and IT technologies in the control of manufacturing plants and the entire supply chain within the enterprise The symposium stressed the scientific challenges and issues covering the whole product and processes life cycle from the design through the manufacturing and maintenance to the distribution and service INCOM 2006 Technical Program also included a special event on Innovative Engineering Techniques in Healthcare Delivery The application of engineering and IT methods in medicine is a rapidly growing field with many opportunities for innovation The Proceedings are composed of 3 volumes Volume 1 Information Systems Control Interoperability Volume 2 Industrial Engineering Volume 3 Operational Research 3 volume set containing 362 carefully reviewed and selected papers presenting the state of the art in international research and development in Information Control problems in Manufacturing Simulating Social Complexity Bruce Edmonds, Ruth Meyer, 2017-11-24 This volume examines all aspects of using agent or individual based simulation This approach represents systems as individual elements having their own set of differing states and internal processes The interactions between elements in the simulation represent interactions in the target systems What makes this social is that it can represent an observed society Social systems include all those systems where the components have individual agency but also interact with each other This includes human societies and groups but also increasingly socio technical systems where the internet based devices form the substrate for interaction These systems are central to our lives but are among the most complex known This poses particular problems for those who wish to understand them The complexity often makes analytic approaches infeasible but on the other hand natural language approaches are also inadequate for relating intricate cause and

effect This is why individual and agent based computational approaches hold out the possibility of new and deeper understanding of such systems This handbook marks the maturation of this new field It brings together summaries of the best thinking and practices in this area from leading researchers in the field and constitutes a reference point for standards against which future methodological advances can be judged This second edition adds new chapters on different modelling purposes and applying software engineering methods to simulation development Revised existing content will keep the book up to date with recent developments This volume will help those new to the field avoid reinventing the wheel each time and give them a solid and wide grounding in the essential issues It will also help those already in the field by providing accessible overviews of current thought The material is divided into four sections Introduction Methodology Mechanisms and Applications Each chapter starts with a very brief section called Why read this chapter followed by an abstract which summarizes the content of the chapter Each chapter also ends with a section on Further Reading Whilst sometimes covering technical aspects this second edition of *Simulating Social Complexity* is designed to be accessible to a wide range of researchers including both those from the social sciences as well as those with a more formal background It will be of use as a standard reference text in the field and also be suitable for graduate level courses

Foundations of Multi-Paradigm Modelling for Cyber-Physical Systems Paulo Carreira,Vasco Amaral,Hans Vangheluwe,2020-05-07 This open access book coherently gathers well founded information on the fundamentals of and formalisms for modelling cyber physical systems CPS Highlighting the cross disciplinary nature of CPS modelling it also serves as a bridge for anyone entering CPS from related areas of computer science or engineering Truly complex engineered systems known as cyber physical systems that integrate physical software and network aspects are now on the rise However there is no unifying theory nor systematic design methods techniques or tools for these systems Individual mechanical electrical network or software engineering disciplines only offer partial solutions A technique known as Multi Paradigm Modelling has recently emerged suggesting to model every part and aspect of a system explicitly at the most appropriate level s of abstraction using the most appropriate modelling formalism s and then weaving the results together to form a representation of the system If properly applied it enables among other global aspects performance analysis exhaustive simulation and verification This book is the first systematic attempt to bring together these formalisms for anyone starting in the field of CPS who seeks solid modelling foundations and a comprehensive introduction to the distinct existing techniques that are multi paradigmatic Though chiefly intended for master and post graduate level students in computer science and engineering it can also be used as a reference text for practitioners

Modeling and Practice of Erosion and Sediment Transport under Change Mohamed Meddi,Gil Mahé,Hafzullah Aksoy,2019-09-17 Climate and anthropogenic changes impact the conditions of erosion and sediment transport in rivers Rainfall variability and in many places the increase of rainfall intensity have a direct impact on rainfall erosivity Increasing changes in demography have led to the acceleration of land cover changes in natural areas as

well as in cultivated areas and sometimes in degraded areas and desertified landscapes These anthropogenized landscapes are more sensitive to erosion On the other hand the increase in the number of dams in watersheds traps a great portion of sediment fluxes which do not reach the sea in the same amount nor at the same quality with consequences on coastal geomorphodynamics This book is dedicated to studies on sediment fluxes from continental areas to coastal areas as well as observation modeling and impact analysis at different scales from watershed slopes to the outputs of large river basins This book is concentrated on a number of keywords erosion and sediment transport model and practice and change The keywords are briefly discussed with respect to the relevant literature The contributions in this book address observations and models based on laboratory and field data allowing researchers to make use of such resources in practice under changing conditions
