Modelling Change In Integrated Economic And Environmental Systems:

Modelling Change in Integrated Economic and Environmental Systems S. Mahendrarajah, A. J. Jakeman, M. J. McAleer, Michael McAleer, 1999-11-05 This accessible volume fills a much needed gap and addresses core issues on how economic and environmental systems are interconnected looking at how economic frameworks and features of environmental systems can be integrated within formal models to address changes and associated resource management issues at appropriate levels micro level and national or global level The more the relationship between economic and environmental systems is studied analytically and empirically the more aware we become of the gap in our existing knowledge of environmental data and process parameters While important empirical questions are unanswered in environmental economics literature work on the environmental science of ecological systems fails to raise the right questions and identify key variables in human exploited ecosystems This book covers Concepts and Methods Land Water and Production Biodiversity Preservation and Production Pollution Externalities The Environment and Global Economy This timely book will be of interest to environmental scientists economists and policy makers students academics and researchers interested in ecosystems modelling ecological economics and environmental resource economics *Handbook of Computable General Equilibrium Modeling* Peter B. Dixon, Dale Jorgenson, 2012-12-04 Top scholars synthesize and analyze scholarship on this widely used tool of policy analysis in 27 articles setting forth its accomplishments difficulties and means of implementation Though CGE modeling does not play a prominent role in top U S graduate schools it is employed universally in the development of economic policy This collection is particularly important because it presents a history of modeling applications and examines competing points of view Presents coherent summaries of CGE theories that inform major model types Covers the construction of CGE databases model solving and computer assisted interpretation of results Shows how CGE modeling has made a contribution to economic policy *Modeling, Control and Optimization of Water Systems* Thomas Rauschenbach, 2015-12-14 This book provides essential background knowledge on the development of model based real world solutions in the field of control and decision making for water systems It presents system engineering methods for modelling surface water and groundwater resources as well as water transportation systems rivers channels and pipelines The models in turn provide information on both the water quantity flow rates water levels of surface water and groundwater and on water quality In addition methods for modelling and predicting water demand are described Sample applications of the models are presented such as a water allocation decision support system for semi arid regions a multiple criteria control model for run of river hydropower plants and a supply network simulation for public services **Ibss: Economics: 1999** Compiled by the British Library of Political and Economic Science, 2000-12-07 IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences **Hybrid Solutions for the Modelling of Complex Environmental**

Systems Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology

Mathematical Modeling in Economics, Ecology and the Environment Natali Hritonenko, Yuri Yatsenko, 2014-01-08 Updated to textbook form by popular demand this second edition discusses diverse mathematical models used in economics ecology and the environmental sciences with emphasis on control and optimization It is intended for graduate and upper undergraduate course use however applied mathematicians industry practitioners and a vast number of interdisciplinary academics will find the presentation highly useful Core topics of this text are Economic growth and technological development Population dynamics and human impact on the environment Resource extraction and scarcity Air and water contamination Rational management of the economy and environment Climate change and global dynamics The step by step approach taken is problem based and easy to follow The authors aptly demonstrate that the same models may be used to describe different economic and environmental processes and that similar investigation techniques are applicable to analyze various models Instructors will appreciate the substantial flexibility that this text allows while designing their own syllabus Chapters are essentially self contained and may be covered in full in part and in any order Appropriate one and two semester courses include but are not limited to Applied Mathematical Modeling Mathematical Methods in Economics and Environment Models of Biological Systems Applied Optimization Models and Environmental Models Prerequisites for the courses are Calculus and preferably Differential Equations Environmental protection in China Xuehong Wang, 2008 This is a useful book for those who are interested in institutional economic and policy issues in China s ecosystem management environmental protection and poverty alleviation It is also a valuable reference book for university students who are studying environmental economics and development studies in general Yuelai Yu Environmental Sciences

Computational Models in the Economics of Environment and Development A.K. Duraiappah, 2012-12-06 Computational Models in the Economics of Environment and Development provides a step by step guide in designing developing and solving non linear environment development models It accomplishes this by focusing on applied models using real examples as case studies Additionally it gives examples of developing policy interventions based on quantitative model results Finally it uses a simple computer program GAMS to develop and solve models This book is targeted towards university lecturers and students in

economic modeling and sustainable development but is also of particular interest to researchers at sustainable development research institutes and policy makers at international sustainable development policy institutions such the World Bank UNDP and UNEP

Economic Growth and the Environment Sander M. de Bruyn, 2012-12-06 Is economic growth good for the environment A number of economists have claimed that economic growth can benefit the environment recruiting political support and finance for environmental policy measures This view has received increasing support since the early 1990s from empirical evidence that has challenged the traditional environmentalists belief that economic growth degrades the environment This book reviews the theoretical and empirical literature on growth and the environment giving an in depth empirical treatment of the relationship between the two Various hypotheses are formulated and tested for a number of indicators of environmental pressure The test results indicate that alternative models and estimation methods should be used altering previous conclusions about the effect of economic growth on the environment and offering an insight into the forces driving emission reduction in developed countries

Handbook of Irrigation Hydrology and Management Saeid Eslamian, Faezeh Eslamian, 2023-05-31 Ever increasing population growth has caused a proportional increased demand for water and existing water sources are depleting day by day Moreover with the impact of climate change the rates of rainfall in many regions have experienced a higher degree of variability In many cities government utilities have been struggling to maintain sufficient water for the residents and other users The Handbook of Irrigation Hydrology and Management Irrigation Case Studies examines and analyzes irrigated ecosystems in which water storage applications or drainage volumes are artificially controlled in the landscape and the spatial domain of processes varies from micrometers to tens of kilometers while the temporal domain spans from seconds to centuries The continuum science of irrigation hydrology includes the surface subsurface unsaturated and groundwater systems atmospheric and plant subsystems Further the book includes practical case studies from around the world including locations such as Africa Australia China India the Middle East the United States and more Features Offers water saving strategies to increase the judicious use of scarce water resources Presents strategies to maximize agricultural yield per unit of water used for different regions Compares irrigation methods to

offset changing weather patterns and impacts of climate change Theory and Implementation of Economic Models for Sustainable Development J.C. van den Bergh, M.W. Hofkes, 2013-03-09 There is widespread concern for long term environmental issues in relation to economic processes and developments Among the concerned scientists are economists who have taken up the challenge to apply economic insights and tools for the study of long term environment economy interactions and to give the concept of sustainable development economic hands and feet This book presents a pluralistic perspective on efforts problems and successes in this area This collection of papers was originally prepared for an international symposium titled Economic Modelling of Sustainable Development Between Theory and Practice which was hosted by the Vrije Universiteit in Amsterdam on December 20th 1996 The main motivation for this symposium was that the usefulness of the concept of sustainable development for theoretical and applied modelling is still being debated growth theorists resource economists ecological economists policy makers and many others are trying to deal with the concept in various and sometimes conflicting ways The aim of the symposium was to bring together different theoretical and implementational perspectives on modelling for sustainable development We hope that this volume will inform a wide audience about the perspectives and progress in this important area of research as well as stimulate further research notably on applied modelling and practical methods for the analysis of sustainable development at various spatial scales The papers have in due course been revised several times based on comments made by discussants referees and the editors

Handbook of Engineering Hydrology (Three-Volume Set) Saeid Eslamian, 2018-10-03 While most books examine only the classical aspects of hydrology this three volume set covers multiple aspects of hydrology and includes contributions from experts from more than 30 countries It examines new approaches addresses growing concerns about hydrological and ecological connectivity and considers the worldwide impact of climate change Handbook on the Economics of Ecosystem Services and Biodiversity Paulo A L D Nunes, Pushpam Kumar, Tom Dedeurwaerdere, 2014-06-27 In recent years there has been a marked proliferation in the literature on economic approaches to ecosystem management which has created a subsequent need for real understanding of the scope and the limits of the economic approaches to ecosystems and

Climate Change: An Integrated Perspective Pim Martens, J. Rotmans, 2006-04-11 Global climate change rapid substantial and human induced may have radical consequences for life on earth The problem is a complex one however demanding a multi disciplinary approach A simple cost benefit analysis cannot capture the essentials nor can the issue be reduced to an emissions reduction game as the Kyoto process tries to do It is much more sensible to adopt an integrative approach which reveals that global climate change needs to be considered as a spider in a web a triggering factor for a range of other related problems land use changes water supply and demand food supply energy supply human health air pollution etc But an approach like this which takes account of all items of knowledge known and uncertain does not produce clear cut final and popular answers It does provide useful insights however which will allow comprehensive and effective long term climate

strategies to be put into effect Climate Change An Integrated Perspective will appeal to a broad spectrum of readers It is a useful source for the climate change professionals such as policy makers and analysts natural and social scientists It is also suitable for educationalists students and indeed anyone interested in the fascinating world of multidisciplinary research underlying our approach to this global change issue Spatially Integrated Social Science Michael F. Goodchild, Donald G. Janelle, 2004-01-15 Spatial analysis assists theoretical understanding and empirical testing in the social sciences and rapidly expanding applications of geographic information technologies have advanced the spatial data gathering needed for spatial analysis and model making This much needed volume covers outstanding examples of spatial thinking in the social sciences with each chapter showing some aspect of how certain social processes can be understood by analyzing their spatial context The audience for this work is as trans disciplinary as its authorship because it contains approaches and methodologies useful to geography anthropology history political science economics criminology sociology and statistics *Integrated Environmental Modelling to Solve Real World Problems* A.T. Riddick, H. Kessler, J.R.A. Giles, 2017-01-10 The discipline of Integrated Environmental Modelling IEM has developed in order to solve complex environmental problems for example understanding the impacts of climate change on the physical environment IEM provides methods to fuse or link models together this in turn requires facilities to make models discoverable and also to make the outputs of modelling easily visualized The vision and challenges for IEM going forward are summarized by leading proponents Several case studies describe the application of model fusion to a range of real world problems including integrating groundwater and recharge models within the UK Environment Agency and the development of catastrophe models to predict better the impact of natural hazards Communicating modelling results to end users who are often not specialist modellers is also an emerging area of research addressed within the volume Also included are papers that highlight current developments of the technology platforms underpinning model fusion **A Systems Approach to Modeling the Water-Energy-Land-Food Nexus, Volume II** Bernard Amadei, 2019-02-13 This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the management and allocation of community based WELF resources Over the next 50 years rapid population urbanization and economic growth worldwide will create unprecedented demands for water energy land and food WELF resources The discussion on how to meet human needs for WELF resources and how to guarantee their respective securities has changed over time from looking at all four sectors in isolation to understanding their interdependency through the so called WELF nexus The approach presented in this book responds to the overall agreement in the WELF nexus literature that the management and allocation of WELF resources at the community level need to be examined in a more systemic multidisciplinary participatory and practical manner while seeking to increase synergies and reduce trade offs This book was written to explore the value proposition of that approach This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the management and allocation of community

based WELF resources Volume 1 focuses on defining the landscape in which the nexus operates and outlines the proposed methodology Volume 2 explores the quantitative and qualitative modeling of the nexus and landscape using system modeling tools including system dynamics It presents a road map for the formulation simulation selection and ranking of possible intervention plans The proposed methodology is designed to serve as a guide for different groups involved in the science and policy decision aspects of the WELF nexus within the context of community development The methodology focuses mostly on WELF related issues in small scale and low income communities where securing resources is critical to their short and long term livelihood and development

Integrated Modelling of Ecosystem Services and Land-Use Change Youjia Liang, Lijun Liu, Jiejun

Huang, 2019-10-17 This book presents essential case studies on the integrated modelling of ecosystem services and land use change in the field of landscape ecology The case studies were mainly conducted in the Zhangye oasis of the Hexi corridor and the upper reaches of the Heihe river basin including Loess plateau for wind power and the inland waterways of the Yangtze River for the regulation of extreme events The book puts forward an integrated modelling method including human activities natural processes land use change and ecosystem management and explores multiple scenarios based on the interests of local managers and their implications for ecosystem services As the book demonstrates the integrated modelling method for ecosystem services and land use change can serve as a valuable tool for gauging the impact of various development scenarios in this study area and in other regions with similar characteristics In addition numerous charts and diagrams are included in each chapter facilitating the simulation and assessment of specific land use change impacts on ecosystem services in various study areas
