Models Of Short Term Memory:

Models Of Short-Term Memory Susan E. Gathercole, 2013-06-20 This volume offers a collection of theoretical perspectives in the area of short term memory. It contains overviews of models of short term memory with particular emphasis placed on the detailed description of the functioning of the models. The volume represents both computational approaches and theories expressed in more traditional verbal form. Models represented in the volume also cover both developmental and neuropsychological perspectives on short term memory. This book should appeal to active researchers in the area of memory to graduate students and to academics who wish to update their knowledge of this fast developing area of research and theory. Final year undergraduates may also find this book of interest.

Short-term/working Memory Ian Neath, Gordon D. A. Brown, Claudette Fortin, 1999 This special issue of the International Journal of Psychology had its origins in the Quebec 98 Conference on Short Term Memory held in Quebec City Canada in June 1998. Following this conference participants were invited to submit contributions based on and expanding upon their presentation at this conference. The enthusiastic response made it possible to collect the exciting selection of articles that you will find herein. It must be noted that because of the finite journal space available the editors and reviewers were faced with the difficult problem of selecting only a limited number of the excellent articles that were submitted. The outcome of this process is this special issue which we believe provides an up to date overview of current research on short term working memory including the challenges, controversies and recent theoretical advances in this field.

Cognitive Models of Memory Martin A. Conway, 1997 The chapters of this volume evaluate models of the short term retention of knowledge, conceptual knowledge, autobiographical knowledge, transitory mental representations, the neurobiological basis of memory and age related changes in human memory.

Short-term and Working Memory Susan E. Gathercole, 2001 This special issue ponders a detailed and contemporary analysis of the theoretical underpinnings of short term and working memory. Articles focus on short term memory for phonological, semantic and spatial material, on executive function and on short term forgetting. The empirical perspectives include the neuroimaging of short term memory, short term memory development and the neuropsychology and neurobiology of memory in addition to laboratory based experimental studies. Together these articles identify significant current models and approaches to short term and working memory.

providing a broad set of perspectives which illustrate the wide impact of working memory on the understanding of human cognition

Interactions Between Short-Term and Long-Term Memory in the Verbal Domain Annabel Thorn, Mike Page, 2008-08-15 The relationship between short and long term memory systems is an issue of central concern to memory theorists This book is the first single publication to comprehensively address this key issue

Repetition and Rehearsal Mechanisms in Models for Short-term Memory Robert A. Bjork, 1969 The paper presents a theoretical discussion of the probable general mechanisms of repetition and rehearsal in short term memory It points out the implications of the various mechanisms and evaluates their relative adequacies It examines questions on the representation of rehearsal in models for short term memory Author

Models of Thought Herbert Alexander Simon, 1979-01-01 Nobel Laureate Herbert A Simon has in the past quarter century been in the front line of the information processing revolution in fact to a remarkable extent his and his colleagues contributions have written the history of that revolution in cognitive psychology Research in this burgeoning new branch of knowledge seeks to describe with precision the workings of the human mind in terms of a small number of basic mechanisms organized into strategies Newly developed computer languages express theories of mental processes so that computers can then simulate the predicted human behavior This book brings together papers dating from the start of Simon s career to the present Its focus is on modeling the chief components of human cognition and on testing these models experimentally After considering basic structural elements of the human information processing system especially search selective attention and storage in memory Simon builds from these components a system capable of solving problems inducing rules and concepts perceiving and understanding These essays describe a relatively austere simple and unified processing system capable of highly complex and various tasks They provide strong evidence for an explanation of human thinking in terms of basic information processes

Handbook of Neuroscience for the Behavioral Sciences, Volume 1 Gary G. Berntson, John T. Cacioppo, 2009-10-12 Handbook of Neuroscience for the Behavioral Sciences Volume 1 As technology has made imaging of the brain noninvasive and inexpensive nearly every psychologist in every subfield is using pictures of the brain to show biological connections to feelings and behavior Handbook of Neuroscience for the Behavioral Sciences Volume I provides psychologists and other behavioral scientists with a solid foundation in the increasingly critical field of neuroscience Current and accessible this volume provides the information they need to understand the new biological bases research tools and implications of brain and gene research as it relates to psychology

Five Types of Learning Carole Bogue PhD, 2018-03-26 The late Dr Donald E Carline taught at the University of Colorado Boulder where he imparted timeless wisdom unto his students focusing on K 12 education He emphasized five types of learning sensory experience learning memory motor learning problem solving critical thinking and social emotional learning In Five Types of Learning one of Carlines former students Carole Bogue Ph D presents the philosophy and thinking behind each type of learning drawing on Carlines material and lectures that he delivered in a wonderful storytelling manner Bogue also reveals the recent

literature in the five areas of learning and how to facilitate them. She finds significant support for Carline's viewpoints and suggests effective strategies conducive to student learning in light of recent research.
