Modern Biology Its Conceptual Foundations:

Modern Biology; Its Conceptual Foundations Elof Axel Carlson, 1967 Modern Biology; Its Conceptual Foundations Elof Axel Carlson, 1967 *The Scientific 100* John Simmons, Lynda Simmons, 2000-09-01 Who are the great scientists throughout the ages and what exactly did they do to earn their importance From Archimedes to Newton to Einstein to Hawking *The Scientific 100* provides the fascinating answers Vivid biographical sketches chronicle the lives and accomplishments of the world's preeminent scientists And in the tradition of the Citadel Press 100 Series they are ranked provocatively in order of influence an inspiration for lively discussion This unique volume is a browser's treasure trove and a handy reference for the general reader John Simmons has been associated with Current Biography for more than fifteen years He has written frequently about Nobel laureates in science A member of the New York Academy of Sciences he divides his time between New York City and Paris Conceptual Foundations for Multidisciplinary Thinking Stephen Jay Kline, 1995-01-01 Our current intellectual system provides us with a far more complete and accurate understanding of nature and ourselves than was available in any previous society This gain in understanding has arisen from two sources the use of the scientific method and the breaking up of our intellectual enterprise into increasingly narrower disciplines and research programs However we have failed to keep these narrow specialties connected to the intellectual enterprise as a whole The author demonstrates that this causes a number of difficulties We have no viewpoint from which we can understand the relationships between the disciplines and lack a forum for adjudicating situations where different disciplines give conflicting answers to the same problem We seriously underestimate the differences in methodology and in the nature of principles in the various branches of science This provocative and wide ranging book provides a detailed analysis and possible solutions for dealing with this problem **Mind in Life** Evan Thompson, 2010-09-30 Thompson explores the explanatory gap between biological life and consciousness drawing on sources as diverse as molecular biology evolutionary theory artificial life complex systems theory neuroscience psychology Continental Phenomenology and analytic philosophy to show that mind and life are more continuous than previously accepted **A Conceptual History of Modern Embryology** Scott F. Gilbert, 2013-11-11 Glory to the science of embryology So Johannes Holtfreter closed his letter to this editor when he granted permission to publish his article in this volume And glory there is glory in the phenomenon of animals developing their complex morphologies from fertilized eggs and glory in the efforts of a relatively small group of scientists to understand these wonderful events Embryology is unique among the biological disciplines for it denies the hegemony of the adult and sees value indeed more value in the stages that lead up to the fully developed organism It seeks the origin and not merely the maintenance of the body And if embryology is the study of the embryo as seen over time the history of embryology is a second order derivative seeing how the study of embryos changes over time As Jane Oppenheimer pointed out Science like life itself indeed like history itself is a historical phenomenon It can build itself only out of its past Thus there are several

ways in which embryology and the history of embryology are similar Each takes a current stage of a developing entity and seeks to explain the paths that brought it to its present condition Indeed embryology used to be called *Entwicklungsgeschichte* the developmental history of the organism Both embryology and its history interpret the interplay between internal factors and external agents in the causation of new processes and events *How Molecular Forces and Rotating Planets Create Life* Jan Spitzer,2021-02-09 A reconceptualization of origins research that exploits a modern understanding of non covalent molecular forces that stabilize living prokaryotic cells Scientific research into the origins of life remains exploratory and speculative Science has no definitive answer to the biggest questions What is life and How did life begin on earth In this book Jan Spitzer reconceptualizes origins research by exploiting a modern understanding of non covalent molecular forces and covalent bond formation a physicochemical approach propounded originally by Linus Pauling and Max Delbr ck Spitzer develops the Pauling Delbr ck premise as a physicochemical jigsaw puzzle that identifies key stages in life s emergence from the formation of first oceans tidal sediments and proto biofilms to progenotes proto cells and the first cellular organisms *True Materialism* Jensen Suther,2025-09-16 In recent years there has been an explosion of interest in both Marxism and German Idealism across the humanities but the discourse around the two traditions has grown stagnant and is still defined by the same century old debates materialism versus idealism history versus logic revolution versus reform With this exciting new work Jensen Suther endeavors to transform this discourse by presenting an unprecedented systematic vision of the possibility of a Hegelian Marxism grounded in Aristotle s logic of living form Through engagement with three titans of literary modernism Franz Kafka Thomas Mann and Samuel Beckett Suther pursues not only an account of Hegel s materialism but also a new critique of capitalist modernity Breaking with the received view of Marx s relation to German Idealism the book argues that the materialist critique of capitalist production is inseparable from Hegel s idea that the demand for freedom is a demand for mutual recognition The implication for Marxist criticism is that literary works cannot be understood apart from the political struggle for both recognition and new forms of social production Anyone invested in socialist politics the future of literary theory the history of philosophy and the study of modernism will want to contend with the way Suther rethinks Marxist theory and literary criticism from the ground up starting with their foundations in Hegelian thought **Topics in the Philosophy of Biology** Marjorie Grene,Everett Mendelson,2012-12-06 The philosophy of biology should move to the center of the philosophy of science a place it has not been accorded since the time of Mach Physics was the paradigm of science and its shadow falls across contemporary philosophy of biology as well in a variety of contexts reduction organization and system biochemical mechanism and the models of law and explanation which derive from the Duhem Popper Hempel tradition This volume we think offers ample evidence of how good contemporary work in the philosophical understanding of biology has become Marjorie Grene and Everett Mendelsohn aptly combine a deep philosophical appreciation of conceptual issues in biology with an historical understanding of the radical changes in the

science of biology since the 19th century In this book they present essays which probe such historical and methodological questions as reducibility levels of organization function and teleology and the range of issues emerging from evolutionary theory and the species problem In conjunction with Professor Grene's collection of essays on the philosophy of biology *The Understanding of Nature* Boston Studies in the Philosophy of Science Vol XXIII and the occasional essays on these topics which we have published in other volumes listed below this volume contributes to bringing biology to the center of philosophical attention Everett Mendelsohn *Explanation in Nineteenth Century Biology* Boston Studies Vol II 1965 David Hawkins *Taxonomy and Information* Boston Studies Vol III 1967 *Levels of Organization in the Biological Sciences* Daniel S. Brooks, James DiFrisco, William C. Wimsatt, 2021-08-24 Scientific philosophers examine the nature and significance of levels of organization a core structural principle in the biological sciences This volume examines the idea of levels of organization as a distinct object of investigation considering its merits as a core organizational principle for the scientific image of the natural world It approaches levels of organization roughly the idea that the natural world is segregated into part-whole relationships of increasing spatiotemporal scale and complexity in terms of its roles in scientific reasoning as a dynamic open-ended idea capable of performing multiple overlapping functions in distinct empirical settings The contributors scientific philosophers with longstanding ties to the biological sciences discuss topics including the philosophical and scientific contexts for an inquiry into levels whether the concept can actually deliver on its organizational promises the role of levels in the development and evolution of complex systems conditional independence and downward causation and the extension of the concept into the sociocultural realm Taken together the contributions embrace the diverse usages of the term as aspects of the big picture of levels of organization Contributors Jan Baedke Robert W Batterman Daniel S Brooks James DiFrisco Markus I Eronen Carl Gillett Sara Green James Griesemer Alan C Love Angela Potochnik Thomas Reydon Ilya T mkin Jon Umerez William C Wimsatt James Woodward
