The Life Sciences in Early Modern Philosophy Ohad Nachtomy, Justin E. H. Smith, 2013-12-04 The present volume advances a recent historiographical turn towards the intersection of early modern philosophy and the life sciences by bringing together many of its leading scholars to present the contributions of important but often neglected figures such as Ralph Cudworth Nehemiah Grew Francis Glisson Hieronymus Fabricius ab Aquapendente Georg Ernst Stahl Juan Gallego de la Serna Nicholas Hartsoeker Henry More as well as more familiar figures such as Descartes Spinoza Leibniz Malebranche and Kant The contributions to this volume are organized in accordance with the particular problems that living beings and living nature posed for early modern philosophy the problem of life in general whether it constitutes something ontologically distinct at all or whether it can ultimately be exhaustively comprehended in the same manner as the rest the problem of the structure of living beings by which we understand not just bare anatomy but also physiological processes such as irritability motion digestion and so on the problem of generation which might be included alongside digestion and other vital processes were it not for the fact that it presented such an exceptional riddle to philosophers since antiquity namely the riddle of coming into being out of apparent or real non being and finally the problem of natural order

extraordinary transformations in knowledge and practice of the life sciences In an era of decolonization mass social welfare policies and the formation of new international institutions such as UNESCO and the WHO monumental advances were made in both theoretical and practical applications of the life sciences including the discovery of life's molecular processes and substantive improvements in global public health and medicine Combining perspectives from the history of science and world history this volume examines the impact of major world historical processes of the postwar period on the evolution of the life sciences Contributors consider the long term evolution of scientific practice research and innovation across a range of fields and subfields in the life sciences and in the context of Cold War anxieties and ambitions Together they examine how the formation of international organizations and global research programs allowed for transnational exchange and cooperation but in a period rife with competition and nationalist interests which influenced dramatic changes in the field as the postcolonial world order unfolded

Science, Evolution, and Creationism Institute of Medicine, National Academy of Sciences, Committee on Revising Science and Creationism: A View from the National Academy of Sciences, 2008-01-28 How did life evolve on Earth The answer to this question can help us understand our past and prepare for our future Although evolution provides credible and reliable answers polls show that many people turn away from science seeking other explanations with which they are more comfortable In the book *Science Evolution and Creationism* a group of experts assembled by the National Academy of Sciences and the Institute of Medicine explain the fundamental methods of science document the overwhelming evidence in support of biological evolution and evaluate the alternative perspectives offered by advocates of various kinds of creationism including intelligent design The book explores the many fascinating inquiries being pursued that put the science of evolution to work in preventing and treating human disease developing new agricultural products and fostering industrial innovations The book also presents the scientific and legal reasons for not teaching creationist ideas in public school science classes Mindful of school board battles and recent court decisions *Science Evolution and Creationism* shows that science and religion should be viewed as different ways of understanding the world rather than as frameworks that are in conflict with each other and that the evidence for evolution can be fully compatible with religious faith For educators students teachers community leaders legislators policy makers and parents who seek to understand the basis of evolutionary science this publication will be an essential resource

Life Sciences and Radiation Jürgen Kiefer, 2011-06-27 Scope and ideas of the workshop The workshop which took place at the University of Giessen from Oct 3 to Oct 7 2002 and whose proceedings are collected in this volume started from the idea to convene a number of scientists with the aim to outline their visions for the future of radiation research on the basis of their expertise As radiation research is a very wide field restrictions were unavoidable It was decided to concentrate this time mainly on molecular and cellular biology because it was felt that here action is particularly needed This did not exclude contributions from neighbouring fields as may be seen from the table of contents It was clearly not planned to have a comprehensive account of the present scientific

achievements but the results presented should only serve as a starting point for the discussion of future lines of research with the emphasis on the outreach to other parts of life sciences If you are interested in the future ask the young we attempted therefore to invite mainly younger colleagues with a few exceptions who had however already left their marks in the field They were asked to describe what they felt is important in radiation research and may have significant influences on other branches of life sciences They were given the task to demonstrate what is lost for science if we do no longer exist

Theology, Science and Life Carmody Grey, 2023-01-26 Offering a bold intervention in the ongoing debate about the relationship between theology and science Theology Science and Life proposes that the strong demarcation between the two spheres is unsustainable theology occurs within and not outside what we call science and science occurs within and not outside theology The book applies this in a penetrating way to the most topical contentious and philosophically charged science of late modernity biology Rejecting the easy dualism of expressions such as theology and science theology or science modern biology is examined so as to illuminate the nature of both In making this argument the book achieves two further things It is the first major English language reception and application of the thought of philosopher Hans Jonas in theology and it makes a decisive contribution to the unfolding reception of Radical Orthodoxy one of the most influential schools in contemporary Anglophone theology

Leading the Modern University Lorna R. Marsden, 2016-10-27 Founded in 1959 York University is now the second largest university in Ontario and third largest university in Canada However starting in 1970s the success of the university was far from guaranteed Leading the Modern University documents the challenges and solutions that five successive university presidents H Ian Macdonald Harry Arthurs Susan Mann Lorna Marsden and Mamdouh Shoukri encountered from the very early 1970s up to 2014 This book is the rare occurrence where a series of university presidents describe and analyze the challenges they faced regarding financing morale crises and succession With each president contributing a chapter covering her or his own years in office Leading the Modern University reveals that large public institutions have internal dynamics and external forces that supersede any individual leader s years in office This is a case study for those interested in organizational change as seen by the leadership of a major public institution during a dynamic period in higher education
