Structural Dynamics with Applications in Earthquake and Wind Engineering Konstantin Meskouris, Christoph Butenweg, Klaus-G. Hinzen, Rüdiger Höffer, 2019-04-27 This book offers a comprehensive introduction to the theory of structural dynamics highlighting practical issues and illustrating applications with a large number of worked out examples In the spirit of learning by doing it encourages readers to apply immediately these methods by means of the software provided allowing them to become familiar with the broad field of structural dynamics in the process The book is primarily focused on practical applications Earthquake resistant design is presented in a holistic manner

discussing both the underlying geophysical concepts and the latest engineering design methods and illustrated by fully worked out examples based on the newest structural codes The spectral characteristics of turbulent wind processes and the main analysis methods in the field of structural oscillations due to wind gusts and vortex shedding are also discussed and applications illustrated by realistic examples of slender chimney structures The user friendly software employed is downloadable and can be readily used by readers to tackle their own problems Potentials for reducing the health and climate impacts of residential biomass combustion in the Nordic countries Karin Kindbom,Tomas Gustafsson,Stefan Åström,Ole-Kenneth Nielsen,Kristina Saarinen,2018-05-24 Residential biomass combustion is a major source of PM2.5 and SLCP Short Lived Climate Pollutants emissions in Denmark Finland and Sweden SLCPs and PM2.5 have impact on climate environment and health When developing strategies for reduced emissions reliable information on current emissions and assessments for how they can be reduced is essential This report presents recommendations for how to further improve national activity data collection procedures for less uncertain emission inventory results It also presents scenario results with estimated technical potentials for reduced emissions of SLCPs and PM2.5 from residential biomass combustion transformed into potential impact on health and climate effects in 2035 **Seismic Retrofitting: Learning from Vernacular**

Architecture Mariana R. Correia,Paulo B. Lourenco,Humberto Varum,2015-08-31 Local communities have adapted for centuries to challenging surroundings resulting from unforeseen natural hazards Vernacular architecture often reveals very intelligent responses attuned to the environment Therefore the question that emerged was how did local populations prepare their dwellings to face frequent earthquakes It was to respond to this gap in knowledge that the SEISMIC V research project was instigated and this interdisciplinary international publication was prepared The research revealed the existence of a local seismic culture in terms of reactive or preventive seismic resistant measures able to survive if properly maintained in areas with frequent earthquakes The fundamental contribution and aims of the publication were to enhance The disciplinary interest in vernacular architecture Its contribution to risk mitigation in responding to natural hazards To encourage academic and scientific research collaboration among different disciplines To contribute to the improvement of vernacular dwellings which half of the world's population still inhabits nowadays Fifty international researchers and experts presented case studies from Latin America the Mediterranean Eastern and Central Asia and the Himalayas region with reference to 20 countries i.e. Algeria Bolivia Bhutan Chile China Egypt El Salvador Greece Haiti Italy Japan Mexico Morocco Nepal Nicaragua Peru Romania Taiwan Turkey and a closer detailed analysis of Portugal This publication brings together 43 contributions with new perspectives on seismic retrofitting techniques and relevant data addressing vernacular architecture an amazing source of knowledge and to this day home to 4 billion people **Structural Design in Building Conservation** Dimitris Theodossopoulos,2012-07-26 No building is properly conserved if it is not structurally sound Consequently architects engineers and conservation officers need an adequate grounding in the technology the materials and the historic origins of

the building in order to complete a conservation project successfully Structural Design in Building Conservation deals with design issues and technical choices showing how they are integrated with the planning and architectural outcomes in a conservation project It brings together theory with current conservation technology discussing the possibilities of structural details and strategies in architectural expression Case studies are central to this and these are organised around such themes as the addition of roofs requalification of space strengthening and re use of fabric repristination additions completions stiffness adjustments and the correction of past mistakes The reader is encouraged to examine the technical details of these real projects and explore the possible solutions The philosophy of structural interventions is introduced in the context of conservation theories and practices in various European countries The main types of strengthening repairs and interventions are explained using different building types and the structural nature of the main elements to be strengthened linear structures frames plates and shells is explored in detail Case studies included cover a very wide range of historic types and conversions not only monumental masonry structures like neoclassical buildings major temples churches public buildings and museums but also more utilitarian structures like historic mills early reinforced concrete structures and vaulting types This is essential reading for all students of architectural conservation and practicing architects and engineers who are involved in conservation projects
