USDA Forest Service Experimental Forests and Ranges Deborah C. Hayes, Susan L. Stout, Ralph H. Crawford, Anne P. Hoover, 2014-07-22 USDA Forest Service Experimental Forests and Ranges EFRs are scientific treasures providing secure protected research sites where complex and diverse ecological processes are studied over the long term This book offers several examples of the dynamic interactions among questions of public concern or policy EFR research and natural resource management practices and policies Often trends observed or expected in the early years of a research program are contradicted or confounded as the research record extends over decades The EFRs are among the few areas in the US where such long term research has been carried out by teams of scientists Changes in society's needs and values can also redirect research programs Each chapter of this book reflects the interplay between the

ecological results that emerge from a long term research project and the social forces that influence questions asked and resources invested in ecological research While these stories include summaries and syntheses of traditional research results they offer a distinctly new perspective a larger and more complete picture than that provided by a more typical 5 year study They also provide examples of long term research on EFRs that have provided answers for questions not even imagined at the time the study was installed

Trees, Forested Landscapes and Grazing Animals Ian D. Rotherham, 2013-03-05 In this comprehensive book the critical components of the European landscape forest parkland and other grazed landscapes with trees are addressed The book considers the history of grazed treed landscapes of large grazing herbivores in Europe and the implications of the past in shaping our environment today and in the future Debates on the types of anciently grazed landscapes in Europe and what they tell us about past and present ecology have been especially topical and controversial recently This treatment brings the current discussions and the latest research to a much wider audience The book breaks new ground in broadening the scope of wood pasture and woodland research to address sites and ecologies that have previously been overlooked but which hold potential keys to understanding landscape dynamics Eminent contributors including Oliver Rackham and Frans Vera present a text which addresses the importance of history in understanding the past landscape and the relevance of historical ecology and landscape studies in providing a future vision
