Statistical Quality Control for the Food Industry

Merton Hubbard,2013-11-11 Considering the ability of food processing companies to consistently manu facture safe foods with uniform quality over the past 20 or 30 years without these new tools and new systems one might expect that quality control improvements would be marginal On the other hand these changes have already provided sub stantial opportunities for process and product improvement This second edition is intended to update the basic concepts and discuss some of the new ones Preface to the First Edition If an automobile tire leaks or an electric light switch fails if we are short changed at a department store or erroneously billed for phone calls not made if a plane de parture is delayed due to a mechanical failure these are rather ordinary annoy ances which we have come to accept as normal occurrences Contrast this with failure of a food product If foreign matter is found in a food if a product is discolored or crushed if illness or discomfort occurs when a food product is eaten the consumer reacts with anger fear and sometimes mass hys teria The offending product is often returned to the seller or a disgruntled letter is written to the manufacturer In an extreme case an expensive law suit may be filed against the company The reaction is almost as severe if the failure is a dif ficult to open package or a leaking container There is no tolerance for failure of food products

Atomic Absorption Spectrometry

J.E. Cantle,1986-01-01 The topic is treated here in a very practical manner The bulk of the book is concerned with real life analyses for practising instrumentalists and differs from the literature supplied by manufacturers of atomic absorption instruments in that the methods described can be interpreted using all sorts of hardware and in that far more chemistry and sample preparation are included

Food Composition and Analysis Leonard W. Aurand, 2013-11-11 There is an increasing demand for food technologists who are not only familiar with the practical aspects of food processing and merchandising but who are also well grounded in chemistry as it relates to the food industry Thus in the training of food technologists there is a need for a textbook that combines both lecture material and lab oratory experiments involving the major classes of foodstuffs and food additives To meet this need this book was written In addition the book is a reference text for those engaged in research and technical work in the various segments of the food industry The chemistry of representative classes of foodstuffs is considered with respect to food composition effects of processing on composition food deterioration food preservation and food additives Standards of identity for a number of the food products as prescribed by law are given The food products selected from each class of foodstuffs for lab oratory experimentation are not necessarily the most important economically or the most widely used However the experimental methods and techniques utilized are applicable to the other products of that class of foodstuff Typical food adjuncts and additives are discussed in relation to their use in food products together with the laws regulating their usage Laboratory experiments are given for the qualitative identification and quantitative estimation of many of these substances
