Gordon, 2013-03-08 The food analyst plays an important role in modern society Stricter control over additives in food and concern about the effects of contamination of food by industrial and agricultural chemicals are among the developments which are leading to an increasing emphasis on detailed and accurate analysis of food However analysis of food is required for many reasons including detection of toxic components monitoring legislation detecting adulteration formulation of controlled diets controlling formulation during product development and detecting changes in food during storage and processing Foods comprise a complex mixture of components and food analysis requires efficient methods of separation with high sensitivity or specificity of detection Although many food components are involatile or thermally labile and therefore not suitable for analysis by gas chromatography other components are volatile and this technique is the preferred analytical method Developments in methods of derivatization injector design and column technology have also extended the applicability of gas chromatography to the analysis of relatively involatile compounds *Food Materials Science* Jose Miguel Aguilera, Peter J. Technologists the ten most significant innovations in food science developed during the past 50 years were named Food Technology September 1989 Among the Top 10 innovations controlled atmosphere packaging CAP for fruits and vegetables was listed 5th in order of importance Of course CAP is a forerunner of MAP modified atmosphere packaging in which a variety of food products are packaged under selective mixtures of atmospheric gases but without the on going maintenance control of the gas mixture Development of packaging systems and films that are selectively permeable to specific gases has been the key element in the commercialization of controlled and modified atmosphere packaging of foods It may not be far from the truth to say that since then there has been an explosion of activities around MAP CAP especially in research and development into various aspects of this technology The application of MAP to some bakery products fresh fruits and salads and fresh meats and meat products has reached a significant level both in Europe and North America The increasing consumer demand for fresh or near fresh products and convenient microwavable foods has added impetus to the growth of MAP CAP technology It is therefore timely that a comprehensive book that provides scientific background and practical applications of the technology should be written
