Garda, Caterina Franchini**

Modern Movements In Architecture:

Modern Movements in Architecture Charles Jencks, 1985 See Camp and Johnson Philip in index Modern Movements in Architecture, 1985 **History of Modern Architecture** Leonardo Benevolo, 1977 **Modern Architecture** Frank Lloyd Wright, 2021-07-13 Frank Lloyd Wright's classic account of his vision for an organic architecture in a beautifully designed new edition *Modern Architecture* is a landmark text the first book in which America's greatest architect put forth the principles of a fundamentally new organic architecture that would reject the trappings of historical styles while avoiding the geometric abstraction of the machine aesthetic advocated by contemporary European modernists One of the most important documents in the development of modern architecture and the career of Frank Lloyd Wright *Modern Architecture* is a provocative and profound polemic against America's architectural eclecticism commercial skyscrapers and misguided urban planning The book is also a work of savvy self promotion in which Wright not only advanced his own concept of an organic architecture but also framed it as having anticipated by decades and bettered what he saw as the reductive modernism of his European counterparts Based on the 1931 original for which Wright supplied the cover illustration this beautiful edition includes a new introduction that puts *Modern Architecture* in its broader architectural historical and intellectual context for the first time The subjects of these lively lectures from *Machinery Materials and Men* to *The Tyranny of the Skyscraper* and *The City* move from a general statement of the conditions of modern culture to particular applications in the fields of architecture and urbanism at ever broadening scales Wright's vision in *Modern Architecture* is ultimately to equate the truly modern with romanticism imagination beauty and nature all of which he connects with an underlying sense of American democratic freedom and individualism The New Eco-Architecture: Alternatives from the Modern Movement Colin Porteous, 2013-10-11 *The New Eco Architecture* builds a historical bridge between architectural science and design It seeks to address neglected aspects of the Modern Movement as a prelude to supporting a diversity of architectural insight and experimentation aimed at twenty first century environmental needs and priorities The attitudes and influences of renowned figures are re examined in relation to current issues of architectural sustainability By setting today's green architectural quest within a twentieth century context and evaluating the main protagonists with regard to a modern eco sensitive lineage the book will be of primary interest to architectural students academics and practitioners However it should also intrigue historians theoreticians and critics who tend to gloss over such issues as well as other disciplines engaged with the built environment **The Details of Modern Architecture** Edward R. Ford, 1990 Covering the period 1890-1932 this book focuses on various recognised masters explaining the detailing and construction techniques used in their buildings *Modern movements in architecture* C. Jencks, **Modern Architecture** Alan Colquhoun, 2002-04-25 This new account of international modernism explores the complex motivations behind this revolutionary movement and assesses its triumphs and failures The work of the main architects of the movement such as Frank Lloyd Wright Adolf Loos Le Corbusier and Mies

van der Rohe is re examined shedding new light on their roles as acknowledged masters Alan Colquhoun explores the evolution of the movement from Art Nouveau in the 1890s to the megastructures of the 1960s revealing the often contradictory demands of form function social engagement modernity and tradition **Architecture** Martin van der Linden,2021-03-12 The question of what architecture is answered in this book with one sentence Architecture is space created for human activities The basic need to find food and water places these activities within a larger spatial field Humans have learned and found ways to adjust to the various contextual difficulties that they faced as they roamed the earth Thus rather than adapting humans have always tried to change the context to their activities Humanity has looked at the context not merely as a limitation but rather as a spatial situation filled with opportunities that allows through intellectual interaction to change these limitations Thus humanity has created within the world their own contextual bubble that firmly stands against the larger context it is set in The key notion of the book is that architecture is space carved out of and against the context and that this process is deterministic *Architecture, Crisis and Resuscitation* Tahl Kaminer,2011-01-20 Studying the relation of architecture to society this book explains the manner in which the discipline of architecture adjusted itself in order to satisfy new pressures by society Consequently it offers an understanding of contemporary conditions and phenomena ranging from the ubiquity of landmark buildings to the celebrity status of architects It concerns the period spanning from 1966 to the first years of the current century a period which saw radical change in economy politics and culture and a period in which architecture radically transformed substituting the alleged dreariness of modernism with spectacle *An Architecture of Immanence* Mark A. Torgerson,2007-01-22 Torgerson begins by discussing God s transcendence and immanence and showing how church architecture has traditionally interpreted these key concepts He then traces the theological roots of immanence s priority from liberal theology and liturgical innovation to modern architecture Next Torgerson illustrates this new architecture of immanence through particular practitioners focusing especially on the work of theologically savvy architect Edward Anders S vik Finally he addresses the future of church architecture as congregations are buffeted by the twin forces of liturgical change and postmodernism Theory of Experience in Architecture and Urban Design Adolfo Benito Narváez Tijerina,Gabriela Carmona Ochoa,2024-07-05 This unique volume presents the practical tools for architects and urban designers to improve the work processes of architectural design from conception to construction taking into consideration the personalized world of users architects and urban designers The volume starts from the conception of architectural space as a continuum that goes from the subjective depth of the mind to the objective reality taking into consideration the perspective of building experiences for users It is based on the idea that at the heart of that continuum is the experience of architecture and the city as the element that unites them and gives them meaning The volume first defines what the architectural experience is from the processes of perception cognition and evaluation that users and architects make about workplaces and programs It goes on to consider the knowledge and

tools needed for the evaluation of users and places providing the methods that will help to understand the architectural experience desired by the main users of both the architectural object and an urban design providing a series of techniques that have proven effective Key features Describes the theoretical approaches methods and tools necessary for architectural and urban design for creating experiences for users Provides a deep understanding of the nature of built environments and what they express Discusses specific methods for in depth research on users subjective space through making meaningful contact with them and through appropriate technological means such as research on their expressions and communications on virtual social networks This book will help to make urban architects and designers aware of their importance for the implementation of public policies that will work in the very long term with the expectation that by becoming aware of this role they can act in accordance with an ethic based on values of protection of life human solidarity compassion vitality freedom equality between people and social justice

A Critical History of Contemporary Architecture Asst Prof David Rifkind, Dr Elie G Haddad, 2014-03-28 This book provides a comprehensive critical overview of the developments in architecture from 1960 to 2010 The first section provides a presentation of major movements in architecture after 1960 and the second a geographic survey that covers a wide range of territories around the world This book not only reflects the different perspectives of its various authors but also charts a middle course between the aesthetic histories that examine architecture solely in terms of its formal aspects and the more ideological histories that subject it to a critique that often skirts the discussion of its formal aspects
