Observing the Solar System Gerald North, 2012-10-25 Written by a well known and experienced amateur astronomer this is a practical primer for all aspiring observers of the planets and other Solar System objects Whether you are a beginner or more advanced astronomer you will find all you need in this book to help develop your knowledge and skills and move on to the next level of observing This up to date self contained guide provides a detailed and wide ranging background to Solar System astronomy along with extensive practical advice and resources Topics covered include traditional visual observing techniques using telescopes and ancillary equipment how to go about imaging astronomical bodies how to conduct measurements and research of scientifically useful quality the latest observing and imaging techniques Whether your interests lie in observing aurorae meteors the Sun the Moon asteroids comets or any of the major planets you will find all you need here to help you get started

Firefly Solar System Observer's Guide Peter Grego, 2006 An introduction to observing the solar system with binoculars or small telescopes Includes information on the moon sun meteors comets asteroids and nine planets

Venus and Mercury, and How to Observe Them Peter Grego, 2007-11-30 Venus and Mercury have long been regarded as difficult targets for amateur observers but advances in commercially made telescopes have brought them within the skills of observers of only moderate experience Peter Grego's fascinating book presents an up to date detailed description of the history and geology of the so called inferior planets and provides the latest most useful advice on observing and recording them with commercially available telescopes and cameras The book also offers a wealth of detailed practical information on every aspect of observing from safely targeting the two planets through visual observing to sketching and electronic imaging

Blazing a Ghostly Trail Peter Grego, 2013-10-19 Ice and Fire Great Comets to Come was written because a special celestial event climaxes towards the end of 2013 the arrival fresh from the Oort Cloud of Comet C 2012 S1 ISON By all predictions even the most pessimistic ones this comet is set to be one of perhaps the most dazzling comet seen in modern history and has the astronomical world buzzing with anticipation Skywatchers have already been primed for C 2012 ISON earlier in 2013 with the apparition of another naked eye

comet C 2011 L4 PanSTARRS and following C 2012 S1 ISON there is the prospect of 2012 K1 PanSTARRS reaching naked eye visibility in August 2014 Future bright cometary prospects are also discussed taking into account the latest predictions Examining the origin and nature of comets using examples of great comets from the past this book sets the scene for the arrival of Comet C 2012 S1 and those following it over the next few years in the inner Solar System Skywatchers and amateur astronomers can learn how to follow observe and record comets There is also a guide on how to keep abreast of the latest cometary discoveries and how to use a variety of reputable sources including publications websites programs and apps to visualize and plan observations The role of the amateur in cometary discovery also is featured as well as details on how professional astronomers plan to get the most science out of cometary apparitions how and why professionals go about discovering comets and upcoming plans to visit comets with space probes and later perhaps human visits Illustrations provide historic images of comets images from space probes and images of the latest bright comets Orbital plots and easy to follow sky charts are also included This book is a unique guide that sets the scene by giving a comprehensive history of comets and examples of great comets throughout history and informs the reader about the nature and origins of this spectacular occurrence Expectations are fully covered by explaining not only what the regular person can expect to see but how amateur astronomers can plan observations and what steps the professionals are taking to get the most science from this exciting event

Mars and How to Observe It Peter Grego, 2012-06-06 Mars popularly known as the Red Planet because of its distinct color is visible with the naked eye and is one of very few planets in the Solar System in which it is possible to see weather phenomena and surface features and thus is a favorite for amateur and practical astronomers Commercially made telescopes can reveal its dusty surface markings brilliant polar ice caps and atmospheric phenomena Many of Mars's features appear to change shape and intensity with the seasons its polar caps grow and shrink cyclically clouds billow above the Martian surface and sometimes great dust storms obscure vast sections of the planet The first part of Mars and How to Observe It sets out our current knowledge of Mars as a planet its orbit physical characteristics evolution over time and current geology A planet wide tour of Mars's topography is featured along with clearly labeled maps and close up images of a variety of features The second part of the book explains how amateur and practical astronomers can observe Mars successfully Many aspects are considered in depth including preparing to observe calculating phase and tilt and making observational sketches and drawings There are also plenty of details about how best to make high resolution CCD images Since Mars changes in its apparent size in the sky according to its position in relation to Earth it is best observed during its closest approaches Future apparitions appearances of the Red Planet are therefore featured

Astronomical Cybersketching Peter Grego, 2009-04-21 Sketching the Skies Suddenly and without warning a new star appeared in the night sky and everyone in the community was alarmed Nobody could remember having seen its like before Dazzling to look at this unexpected intruder in the heavenly vault gave off a light that almost rivaled that of the full Moon drowning out the familiar

patterns of stars with its glare The new star's steady white light penetrated deep into the sacred cave illuminating an age old patchwork of intricately drawn pictographs some of these depicted terrestrial objects and events from mundane sketches of bison to vast and sweeping panoramic images of wild galloping horses Other scenes showed celestial phenomena such as the phases of the Moon and prominent asterisms or star patterns The next morning accompanied by solemn chanting in which the entire community participated an elderly shaman entered the sacred cave by the light of a fiery brand and selected a suitable area upon which to depict the new star Once the artwork was finished the shaman reappeared at the cave entrance he held out his arms wide to the slowly brightening morning skies and announced that the powerful magic of the new star had been captured and could now be used to ensure the continuing prosperity of his tribe [Aurora](#) Neil Bone,2007-10-14 This new book addresses a gap in the literature offering an explanation of the aurora's causes how the occurrence of major events may now be predicted and how amateur observers can go about recording displays This is the first serious book about aurora written for practical but non professional observers It provides a concise accessible description of the various auroral forms and how to record them illustrated with color images of recent displays It contains details of Space Weather forecasting websites how to interpret and use the information given on these and how to anticipate auroral activity [Astronomy](#) ,1987

Viewing and Imaging the Solar System Jane Clark,2014-09-24 Viewing and Imaging the Solar System A Guide for Amateur Astronomers is for those who want to develop their ability to observe and image Solar System objects including the planets and moons the Sun and comets and asteroids They might be beginners or they may have already owned and used an astronomical telescope for a year or more Newcomers are almost always wowed by sights such as the rings of Saturn and the moons of Jupiter but have little idea how to find these objects for themselves with the obvious exceptions of the Sun and Moon They also need guidance about what equipment besides a telescope they will need This book is written by an expert on the Solar System who has had a lot of experience with outreach programs which teach others how to make the most of relatively simple and low cost equipment That does not mean that this book is not for serious amateurs On the contrary it is designed to show amateur astronomers in a relatively light hearted and math free way how to become serious [The New Walford Guide to Reference Resources](#) Ray Lester,2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information saving you precious time and effort For those looking for a selective and evaluative reference resource that really delivers on its promise look no further In addition to print sources The New Walford naturally covers an extensive range of e reference sources such as digital databanks digital reference services electronic journal collections meta search engines networked information services open archives resource discovery services and websites of premier organizations in both the public and private sectors But rather than supplying a list of all available known resources as a web search engine might The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful With an emphasis on quality and

sustainability the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature This ensures that The New Walford is clear easy to use and intuitive Publisher *Astronomy Now* ,2008 **Instructions to Young Sportsmen** Peter Hawker,1853 Sky and Telescope Charles Federer,1961 *Journal de la Société Royale D'astronomie Du Canada* Royal Astronomical Society of Canada,2007 Library catalogue in 1911 31 p appended to v 4 **Scientific and Technical Books and Serials in Print** ,1984 *The Journal of the Royal Astronomical Society of Canada* Royal Astronomical Society of Canada,1959 Library catalogue in 1911 31 p appended to v 4 *Wind Power for Developing Nations* Amir Mikhail,1981 *Astronomy and Astrophysics* ,1882
