Arthur Victor Tobolsky, Hermann Mark, 1950 Physical Chemistry of High Polymeric Systems. Second Completely Revised and Augmented Edition Herman Francis Mark, Arthur Victor Tobolsky, 1950 **Polymer Science from 1935-1953** Gary Patterson, 2014-06-30 This sequel to A Prehistory of Polymer Science begins with the Faraday Discussion of 1935 on Polymerization Patterson then examines the remarkable rise and establishment of polymer science after 1935 from the perspective of the emergence of strong intellectual leaders While enough biographical detail is presented to gain an appreciation for the role played by each leader the emphasis of this volume is on the key concepts associated with each individual and how the community embraced these leaders **CRC Handbook of Solubility Parameters and Other Cohesion Parameters, Second Edition** Allan F.M. Barton, 2017-10-19 The CRC Handbook of Solubility Parameters and Other Cohesion Parameters Second Edition which includes 17 new sections and 40 new data tables incorporates information from a vast amount of material published over the last ten years The volume is based on a bibliography of 2 900 reports including 1 200 new citations The detailed careful construction of the handbook develops the concept of solubility parameters from empirical thermodynamic and molecular points of view and demonstrates their application to liquid gas solid and polymer systems *Textbook of Polymer Science* Fred W. Billmeyer, 1984-03-21 This Third Edition of the classic best selling polymer science textbook surveys theory and practice of all major phases of polymer science engineering and technology including polymerization solution theory fractionation and molecular weight

Commercial Polymer Blends L.A. Utracki, 2013-11-27 This book provides an in depth and unparalleled presentation of the compositions of virtually all polymer blends

Polymer Viscoelasticity Y.-H. Lin, 2003 In this book the studies of the Rouse Doi Edwards and extended reptation theories are developed in a consistent manner from a basic level and discussed in detail Viscoelastic properties of nearly monodisperse linear flexible polymers in both the entanglement and entanglement free regions are analyzed quantitatively in terms of the molecular theories

Polymer Viscoelasticity: Basics, Molecular Theories, Experiments And Simulations (2nd Edition) Yn-hwang Lin, 2010-10-15 This book covers in great detail the Rouse segment based molecular theories in polymer viscoelasticity the Rouse theory and the extended reptation theory based on the framework of the Doi Edwards theory that have been shown to explain experimental results in a consistently quantitative way The explanation for the 3 4 power law of viscosity quantitative line shape analyses of viscoelastic responses and agreements between different sorts of viscoelastic responses the consistency between the viscoelasticity and diffusion results the clarification of the onset of entanglement the discovery of the number of entanglement strands per cubed entanglement distance being a universal constant and the basic mechanism of the glass transition related thermorheological complexity are discussed or shown in great detail The mystery behind the success of the Rouse segment based molecular theories over the entropic region of a viscoelastic response is revealed by the Monte Carlo simulations on the Fraenkel chains Specifically the simulation studies give a natural explanation for the coexistence of the energy driven and entropy driven modes in a viscoelastic response and provide a theoretical basis resolving the paradox that the experimentally determined sizes of Rouse and Kuhn segments are nearly the same This book starts from a very fundamental level each chapter is built upon the contents of the previous chapters Thus the readers may use the book as a textbook and eventually reach an advanced research level This book is also a useful source of reference for physicists chemists and material scientists

Aging and Stabilization of Polymers M. B. Neiman, 2012-12-06 The need for a broad development of the production of polymer materials has become evident All these materials are subject to various types of aging destruction hence stabilizers which permit the storage reprocessing and use of polymer materials without any appreciable change in their properties must be introduced into them In recent years this problem of stabilizing polymers has attracted the attention of many scientists and technologists both in the USSR and abroad The scientific basis of the foreign studies will be found in a number of theoretical premises but chiefly the theory of chain reactions with unbranched chains In the Soviet Union the concepts of Academician N N Semenov on chain reactions with degenerate branches have become the starting point of theoretical studies of the stabilization and destruction of polymers Soviet scientists have developed a theory of critical concentrations of antioxidants and have shown

that the processes of stabilization have a very complex chemical character The nature of the polymers themselves greatly affects these processes and consequently different stabilizers are required for polymers of different structures In addition it has been shown that the antioxidants used thus far can not only cause chain termination but can also initiate oxidation and give rise to de generate branches
