Maintaining the integrity of nuclear power plants is critical in the prevention or control of severe accidents. This monograph deals with both basic groups of structural materials used in the design of light water nuclear reactors making the primary safety barriers of NPPs. Emphasis is placed on materials used in VVER type nuclear reactors: Cr-Mo-V and Cr-Ni-Mo-V steel for RPV and Zr-Nb alloys for fuel element cladding. The book is divided into 7 main chapters with the exception of the opening one and the chapter providing a phenomenological background for the subject of radiation damage. Chapters 3-6 are devoted to RPV steels and chapters 7-9 to zirconium alloys analysing their radiation damage, structure changes of mechanical properties due to neutron irradiation as well as factors influencing the degree of their performance degradation. The recovery of damaged materials is also discussed. Considerable attention is paid to a comparison of VVER type and western type light water materials. This monograph will be of great value to postgraduate students in nuclear engineering and materials science and for designers and research workers in nuclear energy.

**Effects of Radiation on Materials** Arvind S. Kumar, 1994      **Structural Alloys for Nuclear Energy Applications** Robert Odette, Steven Zinkle, 2019-08-15

High performance alloys that can withstand operation in hazardous nuclear environments are critical to present-day in-service reactor support and maintenance and are foundational for reactor concepts of the future. With commercial nuclear energy vendors and operators facing the retirement of staff during the coming decades, much of the scholarly knowledge of nuclear materials pursuant to appropriate impactful and safe usage is at risk. Led by the multi-award winning editorial team of G. Robert Odette, UCSB and Steven J. Zinkle, UTK/ORNL and with contributions from leaders of each alloy discipline, *Structural Alloys for Nuclear Energy Applications* aids the next generation of researchers and industry staff developing and maintaining steels, nickel-base alloys, zirconium alloys and other structural alloys in nuclear energy applications. This authoritative reference is a critical acquisition for institutions and individuals seeking state-of-the-art knowledge aided by the editors' unique personal insight from decades of frontline research, engineering and management. Focuses on in-service irradiation, thermal, mechanical and chemical performance capabilities. Covers the use of steels and other structural alloys in current fission technology, leading edge Generation IV fission reactors and future fusion power reactors. Provides a critical and comprehensive review of the state-of-the-art experimental knowledge base of reactor materials for applications ranging from engineering safety and lifetime assessments to supporting the development of
