Corrosion and Conservation of Cultural Heritage Metallic Artefacts P Dillmann, D Watkinson, E Angelini, A Adriaens, 2013-07-31 The conservation of metallic archaeological and historic artefacts is a major challenge whether they are ancient bronzes or relics of our more recent industrial past Based on the work of Working Party 21 Corrosion of Archaeological and Historical Artefacts within the European Federation of Corrosion EFC this important book summarises key recent research on analytical techniques understanding corrosion processes and preventing the corrosion of cultural heritage metallic artefacts After an introductory part on some of the key issues in this area part two reviews the range of analytical techniques for measuring and analysing corrosion processes including time resolved spectroelectrochemistry voltammetry and laser induced breakdown spectroscopy Part three reviews different types of corrosion processes for a range of artefacts whilst part four discusses on site monitoring techniques The final part of the book summaries a range of conservation techniques and strategies to conserve cultural heritage metallic artefacts Corrosion and conservation of cultural heritage metallic artefacts is an important reference for all those involved in archaeology and conservation including governments museums as well as those undertaking research in archaeology and corrosion science Summarises key research on analytical techniques for measuring and analysing corrosion processes Provides detailed understanding of corrosion processes and corrosion prevention Discusses on site monitoring techniques

Corrosion and conservation of cultural heritage metallic artefacts D.A. Scott, 2013-07-31 Metallographic investigations may be an essential component in the search for authenticity and fabrication technology Assessing how an artefact is made may involve metallographic examination usually entailing the removal of a small sample from the object concerned Examples of the use of metallography are discussed with reference to copper alloys high tin bronzes Chinese bronze mirrors copper plaques iron and steels and plated or coated metals such as depletion gilded surfaces or those covered with gold foil or other metals The different types of features which metallography can reveal concerning ancient metallic structures are briefly discussed with several colour photomicrographs which illustrate the features described in this chapter The importance of metallography as one component of the scientific tools to aid in the determination of authenticity of ancient metallic artefacts is stressed and an example given of old electrotypes from the Victoria and Albert Museum Important literature references are provided to direct the reader to

more detailed studies on the subject In Situ Assessment of Structural Timber Bohumil Kasal, Thomas Tannert, 2011-03-10 Wood is one of the most intriguing structural materials and the only one that is truly renewable Along with stone wood is the oldest structural material on the planet and has been extensively used throughout human history Due to its aesthetical value and positive environmental impact wood has experienced a renaissance in construction As a biodegradable hygroscopic non isotropic material wood presents special challenges for a professional and requires through knowledge ranging from biology to continuum mechanics This state of the art report reflects the current knowledge in the area of in situ assessment of the physical and mechanical properties of wood structures Nondestructive semi destructive and destructive methods are described in a systematic manner where technology equipment and limitations are discussed Some of the discussed methods are used in other materials such as masonry and concrete Most of the methods however are specific to wood and special qualifications are required to understand and apply these methods effectively Existing methods are constantly improved and new methods are being developed This report includes methods that are used in practice or have shown significant promise and have a body of knowledge that supports statements made in this report This is a useable tool for professionals researchers educators and students **Scientific Investigation of Copies, Fakes and Forgeries** Paul

Craddock, 2009-02-04 The faking and forgery of works of art and antiquities is probably now more extensive than ever before The frauds are aided by new technologies from ink jet printers to epoxy resins and driven by the astronomic prices realised on the global market This book aims to provide a comprehensive survey of the subject over a wide range of materials emphasising how the fakes and forgeries are produced and how they may be detected by technical and scientific examination The subject is exemplified by numerous case studies some turning out not to be as conclusive as is sometimes believed The book is aimed at those likely to have a serious interest in these investigations be they curator collector conservator or scientist Paul Craddock has recently retired from the Department of Conservation Documentation and Science at the British Museum where he was a materials scientist Science for Cultural Heritage Claudio Tuniz, 2010 The aim of the conference was to discuss the contribution of physics and other sciences in archaeological research and in the preservation of cultural heritage Considering that the mission of ECSAC is to promote the interaction among the diverse cultures of the peoples from the lands on the Adriatic and Ionian seas it is apt that the major themes were related to the rich history and pre history of this region from Greek Roman archaeology on the eastern Adriatic coasts to the palaeoanthropology of the Neanderthals of the Vindija caves in Croatia from the Roman city of Aquileia to the pleistocenic cave of Homo heidelbergensis in the Karst of Visogliano Trieste from the Roman ship Julia Felix of the Grado lagoon to the ancient bronze Apoxyomenos of the Veli Loscaron in waters A variety of scientific disciplines provide tools and methods that are crucial in reconstructing humanity's past and in preserving material remains that witness the evolution of human culture Geology reconstructs the history of terrestrial environments critical for the evolution and dispersal of humans Chemistry explains reactions that modify materials

left by human activities including the destructive effects of pollution Biology has a critical role in archaeology particularly with the recent advance in analysis of DNA in ancient organic materials
