Rains Asia An Assessment Model For Acid Deposition In Asia:

Rains-Asia Robert J. Downing, Ramesh Ramankutty, Jitendra J. Shah, 1997-01-01 Asia's rapid economic growth has fueled a growing appetite for commercial energy which is satisfied by fossil fuels that emit pollutants. These pollutants are oxidized and transported into the atmosphere creating acidic depositions known as acid rain that can damage foliage, soils, and surface waters. At current energy consumption growth rates by the year 2000, sulfur dioxide emissions from Asia will surpass the emissions of North America and Europe combined. RAINS ASIA is an assessment tool developed by the World Bank, the Asian Development Bank, and donors to study the implications of alternative energy development strategies for air pollution and acid rain and to help identify cost-effective abatement methods. This report provides an overview of the model and some results of analyses that have been conducted as part of the RAINS ASIA program.

Acid Rain - Deposition to Recovery
Peter Brimblecombe, Hiroshi Hara, Daniel Houle, Martin Novak, 2007-12-11 This book looks at the sources and composition of the atmosphere and rainfall with particular attention on acidifying components and those that affect ecosystems. It further widens the subject to look at trace metals. It includes papers on the impact of deposition on soils and forests and the recovery of the natural environment. Work on critical loads makes a contribution to understanding the degree to which deposition must be reduced to limit its impact.

Acid rain 2000 Kenichi Satake, 2012-12-06 The Acid Rain 2000 Conference in Tsukuba, Japan, held 10-16 December 2000, was the sixth such conference in the series, starting with Columbus, Ohio, USA in 1975 and including Sandefjord, Norway in 1980, Muskoka, Canada in 1985, Glasgow, UK in 1990, and Gteborg, Sweden in 1995. This series of International Conferences on the acid rain problem has made a very important contribution to the process of summarising the state of current understanding and making this information available. In the 6th Conference, approximately 600 papers were presented, including talks and posters. About 300 peer-reviewed papers from the presentation appear in this volume and will provide readers with a comprehensive review of the history and scientific aspects of the acid rain problem. The papers appear in three volumes: the first containing the plenary and keynote papers, and the other two the remaining scientific papers. Volume 1 ISBN 0 7923 7132 1, Volume 2 ISBN 0 7923 7133 X, Volume 3 ISBN 0 7923 7134 8. The Conference was arranged under the joint auspices of The Science Council of Japan, The Japanese Society of Limnology, representative academic society, Japan Association of Aerosol Science and Technology, The Japan Society for Analytical Chemistry, Japan Society for Atmospheric Environment, Chemical Society of Japan, The Ecological Society of Japan, The Japanese Society of Environmental Education, Society of Environmental Science, Japan, The Japanese Forestry Society, Japanese Society of Snow and Ice, Japanese Society of Soil Science and Plant Nutrition, and Japan Society on Water Environment, with the cooperation of Ibaraki Prefecture and Japan Environment Agency.

Acid Rain Science and Politics in Japan Kenneth E. Wilkening, 2004-05-21 Acid Rain Science and Politics in Japan is a pioneering work in environmental and Asian history as well as an in-depth analysis of the influence of science on domestic and international environmental politics. Kenneth Wilkening's

study also illuminates the global struggle to create sustainable societies The Meiji Restoration of 1868 ended Japan's era of isolation created self sufficiency and sustainability The opening of the country to Western ideas and technology not only brought pollution problems associated with industrialization including acid rain but also scientific techniques for understanding and combating them Wilkening identifies three pollution related sustainability crises in modern Japanese history copper mining in the late nineteenth and early twentieth centuries which spurred Japan's first acid rain research and policy initiatives horrendous post World War II domestic industrial pollution which resulted in a hidden acid rain problem and the present day global problem of transboundary pollution in which Japan is a victim of imported acid rain He traces the country's scientific and policy responses to these crises through six distinct periods related to acid rain problems and argues that Japan's leadership role in East Asian acid rain science and policy today can be explained in large part by the historical scientific momentum generated by efforts to confront the issue since 1868 reinforced by Japan's cultural affinity with rain its culture of rain Wilkening provides an overview of nature culture and the acid rain problem in Japan to complement the general set of concepts he develops to analyze the interface of science and politics in environmental policymaking He concludes with a discussion of lessons from Japan's experience that can be applied to the creation of sustainable societies worldwide

The Environmental Dimension of Asian Security In-t'aek Hyön, Miranda Alice Schreurs, 2007 Northeast Asia is a region with highly disparate levels of industrialization and political systems It also contains some very troubling security flashpoints the Taiwan Strait the Korean Peninsula and the East China Sea China's rapacious quest for energy and rapid industrial expansion have led to intense international competition with Japan and the United States and internal instability as well North Korea poses two distinct environmental security threats famine refugees and the regime's use of nuclear blackmail for subsidized energy Yet there is very little regional cooperation despite the need to manage disputes over energy natural resources and pervasive pollution The *Environmental Dimension of Asian Security* examines these issues through a regional environmental security complex that explores the potential for greater intersubjective understandings of regional environmental and natural resource problems and greater institutional collaboration and management
