The History of the University of Oxford: Volume VIII: The Twentieth Century Brian Harrison,Trevor Henry Aston,1994-04-07 This volume the eighth in The History of the University of Oxford shows how one of the world's major universities has responded to the formidable challenges offered by the twentieth century Because Oxford's response has not taken a revolutionary or dramatic form outside observers have not always appreciated the scale of its transformation Here full attention is given to the forces for change the rapid growth in provision for the natural and social sciences the advance of professionalism in scholarship sport and cultural achievement the diffusion of international influences through Rhodes scholars two world wars and the University's mounting research priorities the growing impact of government and of public funding the steady advance of women and the impact made by Oxford's broadened criteria for undergraduate admission The volume also provides valuable background material for the discussion of educational policy In short it presents the reader with a rich cornucopia of insight into many aspects of British life

Medium Sized Firms and Economics Growth Janez Prašnikar,2005 The culprit for deficiencies of knowledge about medium sized companies is their frequent inclusion among small companies The authors try to find arguments for a more sensible definition of medium sized company in modern microeconomic theory theory of entrepreneurship and theory of financial markets According to the first one companies grow until they reach the minimum efficient scale On the other hand a company's size is determined by incomplete contractual relationships The second theory argues that medium sized companies have some advantages because a more manageable number of employees and closer ties between them and the entrepreneur may reduce monitoring costs In addition the employees are more willing to invest in formation of specific skills required for their post The third theory claims that due to information asymmetry medium sized firms resort predominantly to internal sources of financing depreciation retained profits while banks relationship banking are more frequently among external sources of finance than capital markets what are medium sized companies dynamic how do they grow national how a national economy to a large extent depends on the efficiency of medium sized companies and international how some medium sized companies acquire characteristics of multinational companies by

means of foreign investment *Routledge Handbook of the Economics of Knowledge* Cristiano Antonelli, Albert Link, 2014-12-05 The Routledge Handbook of the Economics of Knowledge provides a comprehensive framework to integrate the advancements over the last 20 years in the analysis of technological knowledge as an economic good and in the static and dynamic characteristics of its generation process There is a growing consensus in the field of economics that knowledge technological knowledge in particular is one of the most relevant resources of wealth yet it is one of the most difficult and complex activities to understand or even to conceptualize The economics of knowledge is an emerging field that explores the generation exploitation and dissemination of technological knowledge Technological knowledge cannot any longer be regarded as a homogenous good that stems from standardized generation processes Quite the opposite technological knowledge appears more and more to be a basket of heterogeneous items resources and even experiences All of these sources which are both internal and external to the firm are complementary as is the interplay between a bottom up and top down generation processes In this context the interactions between the public research system private research laboratories and various networks of learning processes within and among firms play a major role in the creation of technological knowledge In this Handbook special attention is given to the relationship among technological knowledge and both upstream scientific knowledge and related downstream resources By addressing the antecedents and consequences of technological knowledge from both an upstream and downstream perspective this Handbook will become an indispensable tool for scholars and practitioners aiming to master the generation and the use of technological knowledge **The New International Year Book** ,1958 Register of Educational Research in the United Kingdom, 1992-1995 National Foundation For Educational Research, 1995 This latest volume of the Register of Educational Research in the United Kingdom lists all the major research projects being undertaken in Britain during the latter months of 1992 the whole of 1993 and 1994 and the early months of 1995 Each entry provides names and addresses of the researchers a detailed abstract the source and amount of the grant where applicable the length of the project and details of published material about the research **The Palgrave Companion to Oxford Economics** Robert A. Cord, 2021-06-16 The University of Oxford has been and continues to be one of the most important global centres for economics With six chapters on themes in Oxford economics and 24 chapters on the lives and work of Oxford economists this volume shows how economics became established at the University how it produced some of the world s best known economists including Francis Ysidro Edgeworth Roy Harrod and David Hendry and how it remains a global force for the very best in teaching and research in economics With original contributions from a stellar cast this volume provides economists especially those interested in macroeconomics and the history of economic thought with the first in depth analysis of Oxford economics AI Fairness and Beyond Chris Reed, 2024-08-08 This book proposes a regulatory system for ensuring that AI makes fair decisions No one wants to be the subject of an unfair decision made by an AI and fairness is so important to society that we are likely to want to regulate to demand it But how This book attempts to

answer that question The aim of regulation must be for an AI's decisions to match the human conception of fairness To understand what that is the book proposes a holistic understanding of fairness which tells us what regulation must try to achieve However regulation is not an abstract activity it regulates how humans behave and the humans in question are those who develop and use AI for decision making Thus the book investigates how those humans are attempting to achieve AI fairness It finds that there is a serious mismatch between how technologists conceptualise fairness compared to other humans How can AI regulation bridge this gap Traditional models of regulation cannot solve this problem Fairness is too nuanced too contextual and is ultimately a human emotional response Instead the book proposes to place the responsibility on the AI community to explain and justify their efforts to achieve fairness basing regulatory and legal responses on how well that explanation deals with the risks that particular AI presents and whether the AI operates in accordance with the explanation in use The book concludes by examining how far this regulatory model might be useful for some of the other social problems which AI generates An original and significant contribution to the literature on AI regulation this book is a must read for those working in the areas of law regulation and technology **The New International Year Book** Frank Moore Colby, Allen Leon Churchill, Herbert Treadwell Wade, Frank H. Vizetelly, 1958 *Current Research in Britain*, 1998
