TARGET AUDIENCE B Ed specialization in Science Teaching M Ed specialization in Science Teaching Diploma Courses in Education British Education Index ,1981 **Academic Success And Social Power** Richard Teese,2013-04-18 A most significant text that says something new about how student achievement is shaped Richard Teese cuts across much of the recent talk about reform and allows us to think about the issues afresh His findings will fascinate all Professor Simon Marginson Monash University This eye opening study of Australian secondary education looks beyond clichés about excellence to analyse the historically specific nature of the scholarly ideal against which successive generations of Australian students have been judged Drawing on a wealth of strikingly original research Richard Teese offers a penetrating analysis of Victorian secondary schooling in the half century after World War Two This was a era in which higher secondary schooling ceased to be the preserve of an elite and emerged as a system of mass education It was also a period marked by successive waves of reform in curriculum and assessment Yet at the end of it all Australians have been left with a sharply polarised system of schooling in which the most economically vulnerable populations of young people are also those most at risk of educational failure This book asks the hard questions Are our systems of secondary teaching and the expectations they place on students anachronistic in an age of mass education How far is the curriculum itself responsible for the manifest disparities in achievement between sectors and regions and between boys and girls What has been the universities role in the process of reform and counter reform And what have all these upheavals implied for the practice of teaching

IRVING E SIGEL This volume of essays is a broad gauged effort directed at reflections on the applicability of Piagetian theory to education Identification and de termination of the relevance of Piagetian theory to education is of course not new The bibliographies in this volume do attest to that assertion Then why the persistent interest and why still another volume Rather than deal with the relevance of each article to these issues let us deal with the basic

question of why such continued interest in application of Piagetian theory to education and further raise the problem of the feasibility of such a task Three questions come immediately to mind Why the interest in applicability What are some of the problems that arise in application Is Piagetian theory applicable to education Why the continued interest in application of Piagetian theory in education The answer to this question resides in the sociological and educational issues that arose twenty years ago and still persist in American education namely the need to upgrade the quality of education by providing a coherent conceptual system with a developmental emphasis People gravitated to Piaget because it was the only major system sufficiently comprehensive as well as substantive While learning theories abound they do not tie together general cognitive development with specific relevant content areas e g development of such knowledge domains as number time space geometry etc Thus Piaget offers a development framework within which content areas are embedded

Practical Work in School Science Jerry Wellington,2002-01-22 Practical work has been part of science education for just over 100 years and is accepted as an essential and exciting part of understanding this discipline Although it can be costly and sometimes messy it simply has to be done if students and teachers are to progress in their understanding Schools and universities invest millions of pounds in it and the National Curriculum reveres it but what exactly is going on in classrooms around the country and how are the leading practitioners moving with the times This book attempts to reflect on the value and purpose of practical work as part of the scientific curriculum Why are practical exercises so necessary and what do they contribute to the learning process The chapters examine many issues such as how practical work is perceived by students and teachers whether we will move on to the virtual lab the limitations of current hands on work and valuable alternatives to it the connections between practical work in science education and authentic science what role experimentation plays in current educational practice Jerry Wellington is Reader in Education at Sheffield University and has taught science at all academic levels
