Nuggets From Numbers:

Explorations in Number Theory Cam McLeman, Erin McNicholas, Colin Starr, 2022-12-18 This innovative undergraduate textbook approaches number theory through the lens of abstract algebra. Written in an engaging and whimsical style, this text will introduce students to rings, groups, fields, and other algebraic structures as they discover the key concepts of elementary number theory. Inquiry-based learning (IBL) appears throughout the chapters, allowing students to develop insights for upcoming sections while simultaneously strengthening their understanding of previously covered topics. The text is organized around three core themes: the notion of what a number is and the premise that it takes familiarity with a large variety of number systems to fully explore number theory; the use of Diophantine equations as catalysts for introducing and developing structural ideas; and the role of abstract algebra in number theory, in particular the extent to which it provides the Fundamental Theorem of Arithmetic for various new number systems. Other aspects of modern number theory, including the study of elliptic curves, the analogs between integer and polynomial arithmetic, p -adic arithmetic, and relationships between the spectra of primes in various rings, are included in smaller but persistent threads woven through chapters and exercise sets. Each chapter concludes with exercises organized in four categories: Calculations and Informal Proofs, Formal Proofs, Computation and Experimentation, and General Number Theory Awareness. IBL Exploration worksheets appear in many sections, some of which involve numerical investigations. To assist students who may not have experience with programming languages, Python worksheets are available on the book's website. The final chapter provides five additional IBL explorations that reinforce and expand what students have learned and can be used as starting points for independent projects. The topics covered in these explorations are public key cryptography, Lagrange's four square theorem, units and Pell's Equation, various cases of the solution to Fermat's Last Theorem, and a peek into other deeper mysteries of algebraic number theory. Students should have a basic familiarity with complex numbers, matrix algebra, vector spaces, and proof techniques, as well as a spirit of adventure to explore the numberverse.

The Dyscalculia Toolkit Ronit Bird, 2021-04-14 Designed for all teachers, this book provides a wealth of materials and resources to support the needs of learners aged 6 to 14 years who have difficulty with maths and number. Brown,2012-09-04 Imagine if you could identify your business s most profitable customers craft a better marketing strategy to communicate with them and inspire them to buy more Well now you can And the best part is that you can do it using the data you already have Today everything we do creates data and the volumes are enormous Virtually every time someone views something online enters search on Google or even surfs the web on a smart phone another chunk gets added in real time to the multibillion gigabyte and growing trove of data that can help us better understand and predict consumer behavior We no longer need expertise in math or statistics or even expensive modeling software to get the most out of all these revealing consumer insights A revolution in data analysis is underway and the methods and tools for aggregating and analyzing this data deluge are suddenly far simpler less expensive and more precise than they were In this book the first of its kind Dimitri Maex Managing Director of global advertising agency OgilvyOne New York and the engine behind the agency s global analytics practice reveals how to turn your data those sexy little numbers that can mean more profit for your business into actionable strategies that drive real growth and revenues And he can show you how to do it at virtually no cost In his clear easy to understand style he explains how to Identify which customers are most valuable which have the most potential to be valuable which are most likely to buy more in the future and which are not worth targeting Allocate your marketing assets in the best possible way and pinpoint the outlays that will generate the highest possible returns Figure out precisely which communication or media brought a customer to your company s web site and what that customer will do once she arrives Predict which products or services customers will want in the future Learn which customers are preparing to defect to the competition and how to stop them Determine which customers buy your product because it is perfect for their needs which ones purchase because they liked your ad which ones chose you because of an appealing price and which ones came to you through word of mouth or some combination of all these factors Drill your geographic targeting down to the regional zip code and even neighborhood level Optimize your web presence to get the maximum return from search A must read for marketers striving to get the biggest ROI on their advertising dollars small business owners eager to grow faster researchers needing a consumer in mind for whom to create new products or services those in finance responsible for

growing the bottom line and even creatives looking for feedback to help them improve their output *Sexy Little Numbers* is THE essential tool not just for math nerds and number crunchers but for anyone wishing to use the data at their fingertips to grow their business and increase their profits dramatically **Numericon** Marianne Freiburger, Rachel Thomas, 2015-03-10 Numericon tells the stories of the numbers mathematical discoveries oddities and personalities that have shaped the way we understand the world around us Each chapter is its own story about a number why 12 is a sublime number why 13 is unlucky and 7 lucky and how imaginary numbers hold up buildings The book tells the stories of ancient mathematicians groundbreaking discoveries and mathematical applications that affect our world and our lives in so many ways **Right on the Numbers** Nino Frostino, 2004 The basic subject of the book is to justify which athlete was the Greatest to ever wear a particular number In my research I listed all of the possible uniform numbers 0 to 99 took the finest athletes from the four major sports baseball basketball football and hockey and slotted them under their appropriate uniform number For each player I created a mini biography detailing their finest exploits on the field whether it was All Star nods championships won records held on field highlights etc Basically I created a case for that athlete to be considered the best to ever wear the number Among the possible uniform numbers I've listed nearly 850 athletes for consideration and provided the accompanying biography At the end of each section I form a debate as to the Greatest to ever wear the number and then make a selection After the selection is posted I then list some quotes made by or about the athlete for the reader to gain even more insight into the player Even if the reader is not overly concerned about the choice as to the Greatest under each uniform number the book also serves as a wonderful reference guide If the reader is interested in finding out more about any of the listed athletes it's easy to look up the player and find out who he played for and what he did between the white lines In either case *Right On the Numbers* serves multiple uses and is a must have for any true sports fan **Integers, Polynomials, and Rings** Ronald S. Irving, 2004-01-08 This book began life as a set of notes that I developed for a course at the University of Washington entitled Introduction to Modern Algebra for Teachers Originally conceived as a text for future secondary school mathematics teachers it has developed into a book that could serve well as a text in an undergraduate course in abstract algebra or a course designed as an introduction to higher mathematics This book differs from many undergraduate algebra texts in fundamental ways the reasons lie in the book's origin and the goals I set for the course The course is a two quarter sequence required of students intending to fulfill the requirements of the teacher preparation option for our B.A. degree in mathematics or of the teacher preparation minor It is required as well of those intending to matriculate in our university's Master's in Teaching program for secondary mathematics teachers This is the principal course they take involving abstraction and proof and they come to it with perhaps as little background as a year of calculus and a quarter of linear algebra The mathematical ability of the students varies widely as does their level of mathematical interest **Catalog of Copyright Entries. Processing and Machine Translation Joseph Olive, Caitlin Christianson, John McCary, 2011-03-02 This comprehensive handbook written by leading experts in the field details the groundbreaking research conducted under the breakthrough GALE program The Global Autonomous Language Exploitation within the Defense Advanced Research Projects Agency DARPA while placing it in the context of previous research in the fields of natural language and signal processing artificial intelligence and machine translation The most fundamental contrast between GALE and its predecessor programs was its holistic integration of previously separate or sequential processes In earlier language research programs each of the individual processes was performed separately and sequentially speech recognition language recognition transcription translation and content summarization The GALE program employed a distinctly new approach by executing these processes simultaneously Speech and language recognition algorithms now aid translation and transcription processes and vice versa This combination of previously distinct processes has produced significant research and performance breakthroughs and has fundamentally changed the natural language processing and machine translation fields This comprehensive handbook provides an exhaustive exploration into these latest technologies in natural language speech and signal processing and machine translation providing researchers practitioners and students with an authoritative reference on the topic

Unstable Nuclei In Astrophysics - Proceedings Of The International Workshop Shigeru Kubono, Toshitaka Kajino, 1992-01-24 The main theme of the workshop is to discuss problems of nucleosynthesis in the Universe specifically in connections to the unstable atomic nuclei which would play a crucial role in explosive burning processes This subject is strongly backed up by an increasing interest in studying unstable nuclei in nuclear physics The subjects include primordial nucleosynthesis Hot CNO cycle and rapid proton process neutrino induced nucleosynthesis equation of state of neutron rich matter etc **The American Catalogue** ,1905 *Proofs in Competition Math: Volume 1* Alexander Toller, Freya Edholm, Dennis Chen, 2019-07-04 All too often through common school mathematics students find themselves excelling in school math classes by memorizing formulas but not their applications or the motivation behind them As a consequence understanding derived in this manner is tragically based on little or no proof This is why studying proofs is paramount Proofs help us understand the nature of mathematics and show us the key to appreciating its elegance But even getting past the concern of why should this be true students often face the question of when will I ever need this in life Proofs in Competition Math aims to remedy these issues at a wide range of levels from the fundamentals of competition math all the way to the Olympiad level and beyond Don't worry if you don't know all of the math in this book there will be prerequisites for each skill level giving you a better idea of your current strengths and weaknesses and allowing you to set realistic goals as a math student So mathematical minds we set you off *The Publishers' Circular and Booksellers' Record of British and Foreign Literature* ,1895 **Algebra: Themes, Tools, Concepts -- Teachers' Edition** Henri Picciotto, Anita Wah, 1994 **The Epworth Era** ,1923 *Information Retrieval Technology* Yuexian Hou, Jian-Yun Nie, Le Sun, Bo Wang, Peng
