### Numbers: Their History and Meaning (Dover Books on Mathematics)

Description :

*Much in our daily lives is defined in numerical terms—from the moment we wake in the morning and look at the clock to dialing a phone or paying a bill. But what exactly is a number? When did man begin to count and record numbers? Who made the first calculating machine—and when? At what point did people first think of solving problems by equations? These and many other questions about numbers are answered in this engrossing, clearly written book. Written for general readers by a teacher of mathematics, the jargon-free text traces the evolution of counting systems, examines important milestones, investigates numbers, words, and symbols used around the world, and identifies common roots. The dawn of numerals is also covered, as are fractions, addition, subtraction, multiplication, division, arithmetic symbols, the origins of infinite cardinal arithmetic, symbols for the unknown, the status of zero, numbers and religious belief, recreational math, algebra, the use of calculators &#8212;from the abacus to the computer &#8212;and a host of other topics. This entertaining and authoritative book will not only provide*

 Readable jargon free book examines the earliest endeavors to count and record numbers initial attempts to solve problems by  
 using equations and origins of infinite cardinal arithmetic Surprisingly exciting Choice      Companion Encyclopedia of the  
 History and Philosophy of the Mathematical Sciences Ivor Grattan-Guinness, 2002-09-11 Examines the history and philosophy  
 of the mathematical sciences in a cultural context tracing their evolution from ancient times up to the twentieth century 176  
 articles contributed by authors of 18 nationalities Chronological table of main events in the development of mathematics  
 Fully integrated index of people events and topics Annotated bibliographies of both classic and contemporary sources Unique  
 coverage of Ancient and non Western traditions of mathematics      **Cultural Number Systems** Karenleigh A.  
 Overmann, 2025-04-26 This sourcebook presents an extensive look at cultural number systems in numeracy and writing  
 systems Based on a decade of research by the author the work examines topics such as why Xerxes the First counted his  
 army by having his men march through an enclosure big enough to hold 10 000 of them at a time why the Hawaiian word for  
 twenty means nine and two why an ancient Greek mathematician was driven mad by irrational numbers and how old  
 counting might be and how we might know this Along the way the author describes topics such as dactylonomy the ancient  
 art of expressing and calculating numbers with the fingers specified counting the use of different counting sequences to  
 count different types of objects and the ephemeral abacus strategies for counting that involve people and goods but not an  
 actual device The chapters are organized into six geographical areas the ancient Near East Africa Europe Asia India Oceania  
 and the Americas      Number Theory and Its History Oystein Ore, 2012-07-06 Unusually clear accessible introduction covers  
 counting properties of numbers prime numbers Aliquot parts Diophantine problems congruences much more Bibliography  
**Handbook of the History and Philosophy of Mathematical Practice** Bharath Sriraman, 2024-04-26 The purpose of  
 this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of  
 mathematical practice to the present It aims to synthesize what is known and what has unfolded so far as well as to explore  
 directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is  
 headed Each section offers insights into the origins debates methodologies and newer perspectives that characterize the  
 discipline today Contributions are written by scholars from mathematics history and philosophy as well as other disciplines

that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy
