*Below-Ground Interactions in Ecological Processes* Oren Shelef, Philip G. Hahn, Ana Pineda, Mysore V. Tejesvi, Ainhoa Martinez-Medina, 2020-01-29 Aboveground interactions between plants and organisms have served as a foundation of ecological and evolutionary theories Accumulating evidence suggests that interactions that occur belowground can have immense influence on eco evolutionary dynamics of plants Despite the increasing awareness among scientists of the importance of belowground interactions for plant performance and community dynamics they have received considerably less theoretical and empirical attention compared to aboveground interactions In this eBook we aim to highlight the overlooked roles of belowground interactions and outline their myriad ecological roles from affecting soil health through impacting plant interactions with above ground fauna This eBook with 18 articles and an Editorial includes conceptual contribution together with original research work The chapters are exploring the roles of belowground biotic interactions in the context of ecological processes both below and above ground

**Hydrothermal microbial ecosystems** Andreas Teske, Anna-Louise Reysenbach, 2015-11-24 The papers in the Hydrothermal Vent e book cover a range of microbiological research in deep and shallow hydrothermal environments from high temperature black smokers to diffuse flow habitats and episodically discharging subsurface fluids to the hydrothermal plumes Together they provide a snapshot of current research interests in a field that has evolved rapidly since the discovery of hydrothermal vents in 1977 Hydrothermally influenced microbial habitats and communities represent a wide spectrum of geological setting chemical in situ regimes and biotic communities the classical examples of basalt hosted black smoker chimneys at active mid ocean spreading centers have been augmented by hydrothermally heated and chemically altered sediments microbiota fueled by serpentinization reactions and low temperature vents with unusual menus of electron donors Environmental gradients and niches provide habitats for unusual or unprecedented microorganisms and microbial ecosystems The discovery of novel extremophiles underscores untapped microbial diversity in hydrothermal vent microbial communities Different stages of hydrothermal activity from early onset to peak activity gradual decline and persistence of cold and fossil vent sites correspond to different colonization waves by microorganisms as well as megafauna Perhaps no other field in microbiology is so intertwined with the geological and geochemical evolution of the oceans and promises so many biochemical and physiological discoveries still to be made within the unexhausted richness of extreme microbial life

**Mobile Elements and Plant Genome Evolution, Comparative Analyses and Computational Tools, Volume II** Ruslan

Kalendar, Gennady I. Karlov, 2023-11-28 This Research Topic is part of the Mobile Elements and Plant Genome Evolution Comparative Analyses and Computational Tools series Mobile Elements and Plant Genome Evolution Comparative Analyses and Computational Tools Transposable elements are very common mobile genetic elements that are composed of several classes and make up the majority of eukaryotic genomes The movement and accumulation of mobile genetic elements have been a major force in the formation of the genes and genomes of nearly all organisms As dispersed and ubiquitous mobile elements their life cycle of replicative transposition leads to genome rearrangements affecting cellular function Transposable elements are important drivers of species diversity and they exhibit great variety in structure size and mechanisms of transposition making them important putative actors in genome evolution **Women in Avian Physiology: 2023** Sandra G. Velleman, Francesca Soglia, Servet Yalcin, 2024-03-14 At present less than 30% of researchers worldwide are women Long standing biases and gender stereotypes discourage girls and women from pursuing a career in science technology engineering and mathematics STEM research Science and gender equality are however essential to ensure sustainable development Although underrepresented and often unacknowledged female researchers have been crucial to scientific advances In order to change traditional mindsets gender equality must be promoted stereotypes defeated and girls and women should be encouraged to pursue STEM careers Genetic Diversity of Wild Coffea Arabica Populations in Ethiopia as a Contribution to Conservation and Use Planning Kassahun Tesfaye Geletu, 2006 *Biostimulants in Agriculture* Youssef Rouphael, Giuseppe Colla, 2020-03-24 *Forest Genetics*, 2002 **Microbiology of wetlands** Paul Bodelier, Svetlana N. Dedysh, 2013-07-08 Watersaturated soil and sediment ecosystems i e wetlands are ecologically as well as economically important systems due to their high productivity their nutrient re cycling capacities and their prominent contribution to global greenhouse gas emissions Being on the transition between terrestrial and aquatic ecosystems wetlands are buffers for terrestrial run off thereby preventing eutrophication of inland as well as coastal waters The close proximity of oxic anoxic conditions often created by wetland plant roots facilitates the simultaneous activity of aerobic as well as anaerobic microbial communities Input of nutrients and fast recycling due to active aerobes and anaerobes makes these systems highly productive and therefore attractive for humans as well as many other organisms Wetlands globally are under high pressure due to anthropogenic activities as well as climate change Changes of land use as well as altered hydrology due to climate change will lead to disturbance and loss of these habitats However the diversity and functioning of microbial communities in wetlands systems is highly underexplored in comparison to soils and aquatic ecosystems Given the importance of wetlands and their immediate threats combined with the lack of knowledge on the microbiology of these systems is the basis for this special issue focusing on the current microbiological knowledge and gaps therein to be assessed in future wetland research Papers research papers reviews perspectives opinion papers are welcomed that focus on all aspects that regulate the functioning and community composition of microbes i e bacteria archaea protozoa fungi in wetland ecosystems peat coastal

as well as freshwater marshes flood plains rice paddies littoral zones of lakes etc from all geographic regions Welcomed topics are physiology ecology functioning biodiversity biogeography of microbes involved in nutrient cycling C N P Fe Mn green house gas emissions as well as plant microbe interactions These studies can be multidisciplinary and cover topics from the molecular to the community level

*Anaerobic Digestion* Gavin Collins, Eric D. van Hullebusch, Giovanni Esposito, Cynthia Carliell-Marquet, Fernando G. Fermoso, 2018-11-27 Anaerobic digestion AD is a naturally occurring biological process in soils sediments ruminants and several other anoxic environments that cycles carbon and other nutrients and converts organic matter into a methane rich gas As a biotechnology AD is now well established for the treatment of the organic fraction of various waste materials including wastewaters but is also increasingly applied for an expanding range of organic feedstocks suitable for biological conversion to biogas AD applications are classified in various ways including on the basis of bioreactor design and operating parameters such as retention time temperature pH total solids TS and volatile solids VS contents and biodegradability of substrates AD is an attractive bioenergy and waste wastewater treatment technology The advantages of AD for waste treatment include production of a useable fuel biogas methane possibility of high organic loading reduced carbon footprint and suitability for integration into a wide variety of process configurations and scales Specifically two important and developing applications exemplify the potential of AD technologies 1 the integration of AD as the basis of the core technologies underpinning municipal wastewater and sewage treatment to displace less sustainable and more energy intensive aerobic biological treatment systems in urban water infrastructures and 2 technical innovations for higher rate conversions of high solids wastestreams and feedstocks for the production of energy carriers i e methane biogas but possibly also biohydrogen and other industrially relevant intermediates such as organic acids Internationally the research effort to maximize AD biogas yield has increased ten fold over the past decade Depending on the feedstocks bioreactor design and process parameters fundamental and applied knowledge are still required to improve conversion rates and biogas yields This Research Topic cover aspects related to AD processes such as the effect of feedstock composition as well as the effect of feedstock pre treatment bioreactor design and operating modes on process efficiency microbial community dynamics and systems biology influence of macro and micro nutrient concentrations and availability process control upgrading and calibration of anaerobic digestion models e g ADM1 considering the biochemical routes as well as the hydrodynamics in such ecosystems and novel approaches to process monitoring such as the development and application of novel and rapid diagnostic assays including those based on molecular microbiology Detailed full scale application studies were also particularly welcomed
