Time and the Earth's Rotation D.D. McCarthy, J.D.H. Pilkington, 2012-12-06 IAU Symposium No 82 Time and the Earth's Rotation met to discuss modern research in the field of the rotation of the Earth with particular emphasis on the role of new observational techniques in this work The use of these techniques has prompted a new look at the definitions of the traditional reference systems and the concepts of the rotation of the Earth around its center of mass Specific topics discussed were time polar motion reference systems conventional radio interferometry very long baseline interferometry VLBI Doppler satellite methods satellite laser ranging lunar laser ranging and geophysical research concerning the Earth's rotation Improvement in the accuracy of the observations is a key to possible solutions of the many unsolved problems remaining in this field It appears that such improvement using both classical and new techniques is forthcoming in the near future This will surely contribute to a better understanding of some of the long standing questions concerning the rotation of the Earth around its center of mass and lead to an improved knowledge of the rotating deformable Earth This volume contains the papers presented at IAU Symposium No 82 as well as the discussions provoked by these papers It is hoped that it captures the principal points of the meeting and that it will contribute not only to a better understanding of existing problems but also to future research in time and the Earth's rotation

Geodynamics and Earth Tides Observations from Global to Micro Scale Carla Braitenberg,Giuliana Rossi,Geodynamics and Earth Tides Editor group,2018-08-23 This volume treats the key aspects that must be known when dealing with continuous space geodetic or terrestrial geodetic observations The signals of Earth core resonance are discussed as well as tidal effects on Earth polar motion and on earthquake triggering Hydrologic loading be it ocean tides or subsurface water flows is discussed These signals compete with crustal deformation observations of earthquakes e g Gorkha 2015 during interseismic periods and on volcanoes Elbrus Caucasus The instrumentation that is covered includes superconducting gravimeters continuous seafloor gravimeters interferometric tilt and strain meters and GNSS networks The articles give an up to date account of research in which the Earth tides are a benchmark signal for the sophisticated instrumentation mounted on satellites or the surface observing time variable signals of an evolving Earth Scientists studying the earthquake cycle and geodetic monitoring will find useful material For students in the geosciences the collection offers a good overview of the broad spectrum of topics related to the Earth geodetic monitoring Reference Coordinate Systems for Earth Dynamics E.M.
