Nutrients in Cancer Prevention and Treatment Kedar N. Prasad, Leonida Santamaria, R. Michael Williams, 2012-12-06

Nutrients in Cancer Prevention and Treatment contains articles that were presented by leading researchers and physicians in the field of nutritional oncology. Most of the previous conference proceedings on Nutrition and Cancer have dealt primarily with the issue of the role of nutrients in cancer prevention. This is logical because enormous quantities of laboratory and epidemiologic data have been published on the topic. Nutrients in Cancer Prevention and Treatment also contains several studies on the role of diet and vitamins in cancer treatment. There are very few books that have reviewed laboratory and clinical studies and the role of vitamins in cancer treatment. There are preliminary data suggesting that daily supplementation with high doses of certain vitamins in combination with conventional therapeutic agents may enhance their growth inhibitory effects on tumor cells and may protect normal tissues against some of their toxic effects. This book is unique in the sense that several articles have discussed the mechanisms of action of individual vitamins on cellular and molecular parameters. It is very exciting to note that some of the vitamins inhibit protein kinase C activity, increase the production of certain growth factors, and modulate the expression of a number of oncogenes. These studies at least in part offer rationales for the cancer protective effects of vitamins. Nutritional Oncology David Heber, Zhaoping Li, Vay Liang, 2021-08-23

Nutritional Oncology: Nutrition in Cancer Prevention, Treatment, and Survivorship presents evidence-based approaches to the study and application of nutrition in all phases of cancer, including prevention, treatment, and survivorship. There is a long history of interest in the role of nutrition in cancer, but only in the last 50 years has this interdisciplinary field developed scientific evidence from a combination of population studies, basic research, and clinical studies. Precision oncology, targeted therapies, and immunonutrition have led to advances in cancer treatment and prevention. Highlighting insights from Precision Oncology and Precision Nutrition to improve cancer prevention, treatment, and survival is the core mission of this book. The editors have over 40 years of clinical and research experience integrating science with practical advice based on available evidence for healthcare professionals while highlighting research vistas for the scientific community. Features: Comprehensive treatment of all aspects of nutrition and cancer, including prevention, response to treatment, avoidance of relapse, and promotion of quality of life for cancer survivors. Examines alternative medicines and botanical dietary supplements and identifies hypotheses for future research based on science. This book is written for doctors, dietitians, and other health care professionals advising cancer patients, cancer survivors, and the general public. Functional Foods and Nutraceuticals in Cancer Prevention Ronald Ross Watson, 2008-02-28. Cancer is a leading cause of death among adults, but research shows that the chances of developing cancer can be reduced by lifestyle changes. Increasing numbers of people use dietary vegetables, medicinal herbs, and plant extracts to prevent or treat cancer. Their availability as over-the-counter supplements has contributed to an explosion in the use of herbal extracts and related compounds for health enhancement.

Adrienne Bendich,Richard J. Deckelbaum,2000-11-29 The Nutrition and Health series has been very fortunate to have each of the volumes recognized by rating services such as Doody s as valuable contributions for health professionals and individuals interested in the most up to date and balanced information from the experts in nutrition These independent accolades may have occurred because the Nutrition and Health series has as its overriding mission to provide health profession als with texts that are considered essential because each book includes 1 a synthesis of the state of the science 2 timely in depth reviews by the leading researchers in their respective fields 3 extensive up to date fully annotated reference lists 4 a detailed index 5 relevant tables and figures 6 identification of paradigm shifts and the con sequences 7 virtually no overlap of information between chapters but targeted inter chapterreferrals 8 suggestions of areas for future research and 9 balanced data driven answers to patient questions which are based upon the totality of evidence rather than the findings of any single study The series volumes are not the outcome of a symposium Rather each editor has the potential to examine a chosen area with a broad perspective both in subject matter as well as in the choice of chapter authors The international perspective especially with regard to public health initiatives is emphasized where appropriate Mediterranean Diet Donato F.

Carcinogens and Anticarcinogens in the Human Diet Committee on Comparative Toxicity of Naturally Occurring Carcinogens, Commission on Life Sciences, Division on Earth and Life Studies, National Research Council, 1996-02-26 Despite increasing knowledge of human nutrition the dietary contribution to cancer remains a troubling question Carcinogens and Anticarcinogens assembles the best available information on the magnitude of potential cancer risk and potential anticarcinogenic effect from naturally occurring chemicals compared with risk from synthetic chemical constituents The committee draws important conclusions about diet and cancer including the carcinogenic role of excess calories and fat the anticarcinogenic benefit of fiber and other substances and the impact of food additive regulation The book offers recommendations for epidemiological and diet research Carcinogens and Anticarcinogens provides a readable overview of issues and addresses critical questions Does diet contribute to an appreciable proportion of human cancer Are there significant interactions between carcinogens and anticarcinogens in the diet The volume discusses the mechanisms of carcinogenic and anticarcinogenic properties and considers whether techniques used to evaluate the carcinogenic potential of synthetics can be used with naturally occurring chemicals The committee provides criteria for prioritizing the vast number of substances that need to be tested Carcinogens and Anticarcinogens clarifies the issues and sets the direction for further investigations into diet and cancer This volume will be of interest to anyone involved in food and health issues policymakers regulators researchers nutrition professionals and health advocates

Nutrients and Cancer Prevention Kedar N. Prasad, Frank L. Meyskens Jr., 2012-12-06 During the last 10 years the role of specific nutrients in cancer prevention and cancer treatment has been the subject of intense basic preclinical and clinical research At present the major focus of nutritional oncology is on the mechanisms of carcinogenesis and their modification by nutrients and on cancer prevention studies in animals and humans Some human epidemiological studies have confirmed the hypothesis developed on animals that there is an inverse relationship between the intake and or level of 3 carotene vitamin A vitamin E or vitamin C and the risk of cancer whereas others have shown no such relationship This is not unexpected since the protective effect of individual nutrients may be too small to be detected by epidemiological methodologies in which a single vitamin or mineral is considered as one variable Conclusive evidence regarding the role of nutrients in human cancer prevention will come from a well designed human intervention study using one or more nutrients in a population that has a high risk of developing cancer The involvement of specific nutrients in the regulation of protooncogene expression has just begun Also some of the results of human intervention trials are beginning to yield interesting results A large number of international scientists from various disciplines including cell biology molecular biology nutritional oncology epidemiology and public health reviewed and discussed their most recent findings The following topics were emphasized 1 Mechanisms of carcinogenesis 2

Nutritional Risk Assessment Institute of Medicine, Food and Nutrition Board, Food Forum, 2007-12-08 For more than two decades the practice of risk assessment has been applied to human public health issues and policy makers have used the results of risk assessments in their decision making process Approaches for risk assessment have been developed for nonnutrients such as drugs food additives and pesticides but approaches for risk assessment have received less attention in the nutrition area Some aspects of the risk assessment approach used for nonnutrients are applicable to the assessment of risks related to nutrition The overall approach however must be adapted and modified to take into account the unique aspects of nutrients including the fact that both high and low nutrient intakes are associated with risk Experience with the application of a risk assessment process to the setting of upper levels of intake for essential nutrients for example has uncovered a number of challenges Adapting and developing risk assessment strategies for application in nutrition science could lead to improved approaches to the development of dietary and nutritional recommendations and thus is a topic of considerable interest One nonscientific but overall challenge to nutritional risk assessment relates to increasing and improving communication among experts from key disciplines in ways that could inform the nutritional risk assessment process Among these key disciplines are nutrition
