**Finiteness Properties of Arithmetic Groups Acting on Twin Buildings** Stefan Witzel, 2014-07-16 Providing an accessible approach to a special case of the Rank Theorem the present text considers the exact finiteness properties of  $S$  arithmetic subgroups of split reductive groups in positive characteristic when  $S$  contains only two places While the proof of the general Rank Theorem uses an involved reduction theory due to Harder by imposing the restrictions that the group is split and that  $S$  has only two places one can instead make use of the theory of twin buildings

Twisted Isospectrality, Homological Wideness, and Isometry Gunther Cornelissen, Norbert Peyerimhoff, 2023-05-10 The question of reconstructing a geometric shape from spectra of operators such as the Laplace

operator is decades old and an active area of research in mathematics and mathematical physics This book focusses on the case of compact Riemannian manifolds and in particular the question whether one can find finitely many natural operators that determine whether two such manifolds are isometric coverings The methods outlined in the book fit into the tradition of the famous work of Sunada on the construction of isospectral non isometric manifolds and thus do not focus on analytic techniques but rather on algebraic methods in particular the analogy with constructions in number theory methods from representation theory and from algebraic topology The main goal of the book is to present the construction of finitely many twisted Laplace operators whose spectrum determines covering equivalence of two Riemannian manifolds The book has a leisure pace and presents details and examples that are hard to find in the literature concerning fiber products of manifolds and orbifolds the distinction between the spectrum and the spectral zeta function for general operators strong isospectrality twisted Laplacians the action of isometry groups on homology groups monomial structures on group representations geometric and group theoretical realisation of coverings with wreath products as covering groups and class field theory for manifolds The book contains a wealth of worked examples and open problems After perusing the book the reader will have a comfortable working knowledge of the algebraic approach to isospectrality This is an open access book

**Constructive Commutative Algebra** Ihsen Yengui, 2015-12-11 The main goal of this book is to find the constructive content hidden in abstract proofs of concrete theorems in Commutative Algebra especially in well known theorems concerning projective modules over polynomial rings mainly the Quillen Suslin theorem and syzygies of multivariate polynomials with coefficients in a valuation ring Simple and constructive proofs of some results in the theory of projective modules over polynomial rings are also given and light is cast upon recent progress on the Hermite ring and Gr bner ring conjectures New conjectures on unimodular completion arising from our constructive approach to the unimodular completion problem are presented Constructive algebra can be understood as a first preprocessing step for computer algebra that leads to the discovery of general algorithms even if they are sometimes not efficient From a logical point of view the dynamical evaluation gives a constructive substitute for two highly nonconstructive tools of abstract algebra the Law of Excluded Middle and Zorn's Lemma For instance these tools are required in order to construct the complete prime factorization of an ideal in a Dedekind ring whereas the dynamical method reveals the computational content of this construction These lecture notes follow this dynamical philosophy

**Advances in Rings, Modules and Factorizations** Alberto Facchini, Marco Fontana, Alfred Geroldinger, Bruce Olberding, 2020-06-02 Occasioned by the international conference Rings and Factorizations held in February 2018 at University of Graz Austria this volume represents a wide range of research trends in the theory of commutative and non commutative rings and their modules including multiplicative ideal theory Dedekind and Krull rings and their generalizations rings of integer valued polynomials topological aspects of ring theory factorization theory in rings and semigroups and direct sum decompositions of modules The volume will be of interest to researchers seeking to extend or
