Why Math Must Replace Science Mike Hockney, 2014-11-03 The greatest catastrophe in intellectual history was to regard physics as real and mathematics as an unreal abstraction In fact mathematics is noumenal true reality and physics is phenomenal illusory reality Mathematics tells you what things are in themselves and physics tells you how they appear to us Mathematics is the perfect ground of existence defined by the God Equation It is the source of causation determinism and objective reality all of the things now formally denied by physics which claims that observable reality is indeterministically born of unreal potentiality wavefunctions It is time to replace the scientific method with the mathematical method It is time to recognize that true reality is intelligible not sensible noumenal not phenomenal unobservable not observable metaphysical not physical hidden not manifest rationalist not empiricist necessary not contingent Don't follow the crowd Think for yourself

Basic and Applied Perspectives on Learning, Cognition, and Development Charles A. Nelson, 2013-05-13 Although current views of cognitive development owe a great deal to Jean Piaget this field has undergone profound change in the years since Piaget's death This can be witnessed both in the influence connectionist and dynamical system models have exerted on theories of cognition and language and in how basic work in cognitive development has begun to influence those who work in applied e.g educational settings This volume brings together an eclectic group of distinguished experts who collectively represent the full spectrum of basic to applied aspects of cognitive development This book begins with chapters on cognition and language that represent the current Zeitgeist in cognitive science approaches to cognitive development broadly defined Following a brief commentary on this work the next section turns to more applied issues Although the focus here is on arithmetic learning the research programs described have profound implications for virtually all aspects of education and learning The last chapter views cognitive development from the perspective of ethology and evolutionary biology and in so doing provides a theoretical perspective that is novel and in some ways prescient specifically how can our views of cognition incorporate recent work in biology
