Nutrition Science. B. Srilakshmi, 2006. This book explains our natural requirements and the nutritive value of the various foods we consume. Carbohydrates, proteins, and lipids are discussed in detail. Minerals, both micro and macro, are highlighted. Both fat and water-soluble vitamins, along with the vital role of water, are emphasized. Each food category is explained systematically in terms of its functions, absorption, and metabolism. Recommended dietary allowance and sources are provided. The book further explains energy metabolism, kinds of malnutrition, and various disorders arising from specific nutritional deficiencies. Prevention and treatment of such disorders are also explained. The book would serve as a comprehensive text for students pursuing home science, medicine, nursing, and allied courses. It would also serve as an authoritative and useful reference source for general readers.
