Anaesthesia, Pain, Intensive Care and Emergency Medicine — A.P.I.C.E. Antonino Gullo, 2012-12-06 The management of the critically ill patients has been in the past few years a discipline at the forefront of development which continues to make progress with the support of basic and clinical research This work is a collection of material that deals with the management of critically ill patients published on the occasion of the 13th APICE congress in November 1998 which celebrated 40 years of Critical Care Medicine Cerebrovascular Surgery Jack M. Fein, Eugene S. Flamm, 2012-12-06 Considerable impetus was given to the study and understanding of cerebrovascular anatomy by Thomas Willis and his contemporaries in the seventeenth century yet almost two hundred years were to pass before further significant advances were made in this field Then from the mid nineteenth century onwards the dark ages of cerebrovascular research gradually lifted through the efforts of such workers as Luschka Heubner and Windle whose pioneering anatomical studies formed the basis of the present day understanding of the morphology of the cerebral circulation The turn of the century saw an increasing influence of the early neurologists in describing anatomy of cerebral vessels in relation to their areas of distribution and to the production of focal deficits through specific vascular lesions and anomalies Later still Padgett and others made important observations concerning phylogenetic and developmental aspects of the cerebral circulation These anatomical and clinical studies were remarkable enough but the real breakthrough in investigating cerebral pathophysiology and in devising appropriate corrective neurosurgical procedures had to await the remarkable advances in technology of the past fifty years These began with the advent of cerebral angiography with all its subsequent refinements and progress has been accelerated through establishing noninvasive Doppler and high resolution ultrasound imaging techniques methods for the accurate measurement of cerebral blood flow CT scanning PET scanning and most recently imaging and metabolic NMR scanning **Hemostasis** Douglas A.
