Real World Construction Scheduling:

Real World Construction Project Scheduling John Buttelerwerth, 2018-11 Real World Construction Project Scheduling is called real world because it was written drawing upon the author's 35 years of experience consulting with contractors to help them meet their construction scheduling needs. He knows how contractors use scheduling, what's important to them, and what is not. This text can be combined with any one of the author's four Real World scheduling software books covering either P6 MS Project Phoenix or Asta Elecosoft Powerproject softwares for the lab portion of the course available at www.johnwyattpublishing.com to create a complete construction scheduling course. Combined together in a curriculum, students will gain a confident real world knowledge of construction project scheduling. Using real world examples, this text takes the student through a typical project, learning the planning and scheduling concepts necessary to successfully deliver a project on time. At the time of this writing, it is the only scheduling text that fully investigates the use of start to start and finish to finish activity relationship types when teaching students to hand draw precedence network diagrams and to hand calculate the critical path of the schedule, including all starts and finishes, total float, and free float. If the completion of a construction project runs late, it is very often the result of poor planning in the pre design and/or design phase of the project. This text fully explores the proper use of planning and scheduling throughout all phases of the project delivery, including pre design and design through to occupancy and project closeout. Packaged with the text includes drawings for a sample project used throughout the text, so the students can experience a real world application of the concepts covered in the text. **Real**

World Construction Scheduling Jim Coombes, 1990 **Phoenix Project Manager Real World Scheduling** John Buttelerwerth (Illustrator), 2015-07-01 Phoenix Real World Scheduling is called real world because the author wrote it drawing upon his 30 years of experience consulting with contractors to help them meet their construction scheduling software needs. He knows how contractors use scheduling software, what's important to them, and what is not. Phoenix Project Manager is considered by many to be the best replacement for SureTrak. This manual has been tested and retested in both the classroom and the company training room. It will guide you through the many features of Phoenix Project Manager and teach you how to use the software the way contractors use it. Other software manuals are often hundreds of pages long, filled with dense text that wastes your time trying to cover every corner and nuance of the software, ultimately leaving readers more confused than before they started. Phoenix Real World Scheduling assumes that the reader has no previous exposure to the software and takes the reader through the process of creating a schedule, covering the same features that a contractor would include on their typical schedule. This includes creating and saving the schedule, covering numerous formatting options to customize the look of the schedule, working with calendars, including 50% and 100% weather calendars, then activity coding the schedule to organize the activities. Different views of the schedule are explored, and from there, the schedule is updated, covering all possible update scenarios that may actually occur. The updated schedule is stored using Storepoints and then compared side

by side to the original using Phoenix's very unique Comparisons feature A custom Filter is then created to produce a Six Week Look Ahead schedule With this manual and a few hours of your time you will be ready to effectively use Phoenix Project Manager on a real project
