Longhorn Beetles (Coleoptera, Cerambycidae) of Fennoscandia and Denmark S. Bílý, O. Mehl, 2023-12-28 **The Royal Entomological Society Book of British Insects** Peter C. Barnard, 2011-10-24 The Royal Entomological Society RES and Wiley Blackwell are proud to present this landmark publication celebrating the wonderful diversity of the insects of the British Isles and the work of the RES founded 1833 This book is the only modern systematic account of all 558 families of British insects covering not just the large and familiar groups that are included in popular books but even the smallest and least known It is beautifully illustrated throughout in full colour with photographs by experienced wildlife photographers to show the range of diversity both morphological and behavioural among the 24 000 species All of the 6 000 genera of British insects are listed and indexed along with all the family names and higher groups There is a summary of the classification biology and economic importance of each family together with further references for detailed identification All species currently subject to legal protection in the United Kingdom are also listed The Royal Entomological Society is one of the oldest and most prestigious of its kind in the world It is the leading organisation for professional entomologists and its main aim has always been the promotion of knowledge about insects The RES began its famous Handbooks for the Identification of British Insects in 1949 and new works in that series continue to be published The Royal Entomological Society Book of British Insects has been produced to demonstrate the on going commitment of the RES to educate and encourage each generation to study these fascinating creatures This is a key reference work for serious students of entomology and amateur entomologists as well as for professionals who need a comprehensive source of information about the insect groups of the British Isles they may be less familiar with *Cerambycidae of the World* Qiao Wang, 2017-01-06 Wang has gathered contributions from an impressive cohort of the world's most respected experts on longhorned beetles Chapters review both basics of cerambycid taxonomy morphology and behavior feeding reproduction and chemical ecology as well as more applied concerns such as laboratory rearing pest control and bio security Overall this volume is a valuable contribution to the literature as a one stop shop for readers seeking a comprehensive overview of longhorned beetles It represents a tremendous effort on the part of Wang and the authors and has resulted in a much needed update to the literature This volume is the only work of its kind available at this time and is a valuable addition to the library of any scientist studying wood boring beetles Ann M Ray Biology Xavier University Cincinnati Ohio in The Quarterly Review of Biology Volume 94 2019 There are more than 36 000 described species in the family Cerambycidae in the world With the significant increase of international trade in the recent decades many cerambycid species have become major plant pests outside their natural distribution range causing serious environmental problems at great cost Cerambycid pests of field vine and tree crops and of forest and urban trees cost billions of dollars in production losses damage to landscapes and management expenditures worldwide Cerambycidae of the

World Biology and Pest Management is the first comprehensive text dealing with all aspects of cerambycid beetles in a global context. It presents our current knowledge on the biology, classification, ecology, plant disease transmission, and biological, cultural, and chemical control tactics, including biosecurity measures from across the world. Written by a team of global experts, this book provides an entrance to the scientific literature on Cerambycidae for scientists in research institutions, primary industries, and universities, and will serve as an essential reference for agricultural and quarantine professionals in governmental departments throughout the world.

The Collembola of Fennoscandia and Denmark, Part I: Poduromorpha Arne Fjellberg, 2024-03-11. This is the first part of a multivolume monograph dealing with the about 400 species of springtails Collembola which are known to occur in the Nordic countries, including the Arctic Islands. Volume 1 contains richly illustrated identification keys and full descriptions of 161 species of the section Poduromorpha. The geographical distribution and the preferred natural habitats of the species are summarised. New morphological concepts in species diagnostics are introduced, in particular concerning the mouthparts morphology, which greatly aids in precise identification of the many difficult species of the family Onychiuridae. The book will be indispensable to everyone working with springtail identification in northern Europe. The introduction of new diagnostic characters will be of universal interest to any Collembola taxonomist.

Provisional Atlas of the Longhorn Beetles (Coleoptera, Cerambycidae) of Britain P. F. G. Twinn, 1999. *Catalogue of Palaearctic Coleoptera* Ivan Löbl, Aleš Smetana, 2003. This is the sixth volume of a comprehensive series which covers about 100 000 species of Coleoptera known to occur in the Palaearctic Region. The information provided for each species is as follows: primary taxonomic information of all available names in the genus and species levels published by the end of 1999; the taxonomic information below subfamily, organized alphabetically; and the type species of genera and subgenera, including synonyms. Distributional data of species and subspecies is given per country. Detailed distributional information for strict endemics is provided, and introduced species are indicated. The series is a collective work of about one hundred coleopterists from Europe, Japan, America, and Australia.

Chrysomeloidea I (Vesperidae, Disteniidae, Cerambycidae), 2020-11-04. The aim of *Catalogue of Palaearctic Coleoptera* is to provide a tool that addresses the most urgent needs: 1. a complete list of available names of taxa occurring in the Palaearctic Region, with authors and publication dates; 2. a list of references to primary publications; 3. distributions of the species and subspecies. Thus, the Catalogue is expected to respond to questions related to biodiversity and to increase the badly needed nomenclatural stability. The present updated and revised Catalogue is a collective international work by 12 authors from Austria, Belgium, China, Korea, Japan, and Russia. It includes about 6453 species names of 913 genera. The general structure and the taxonomic, distributional, and bibliographical information of the first edition of the Catalogue are followed with minor changes.
