The Life and Death of Planet Earth Peter D. Ward, Donald Brownlee, 2003 Planet Earth is middle aged Science has worked hard to piece together the story of the evolution of our world up to this point but only recently have we developed the understanding and the tools to describe the entire life cycle of a planet Ward and Brownlee a geologist and an astronomer respectively combine their knowledge of how the critical sustaining systems of our planet evolve through time with their understanding of the life cycles of stars and solar systems to tell the story of the second half of Earth's life The process of evolution will essentially reverse itself life as we know it will subside until only the simplest forms remain Eventually they too will disappear The oceans will evaporate the atmosphere will degrade and as the sun slowly expands Earth itself will eventually meet a fiery end From publisher description

The Medea Hypothesis Peter Ward, 2009-03-31 In *The Medea Hypothesis* renowned paleontologist Peter Ward proposes a revolutionary and provocative vision of life's relationship with the Earth's biosphere one that has frightening implications for our future yet also offers hope Using the latest discoveries from the geological record he argues that life might be its own worst enemy This stands in stark contrast to James Lovelock's Gaia hypothesis the idea that life sustains habitable conditions on Earth In answer to Gaia which draws on the idea of the good mother who nurtures life Ward invokes Medea the mythical mother who killed her own children Could life by its very nature threaten its own existence According to the Medea hypothesis it does Ward demonstrates that all but one of the mass extinctions that have struck Earth were caused by life itself He looks at our planet's history in a new way revealing an Earth that is witnessing an alarming decline of diversity and biomass a decline brought on by life's own biocidal tendencies And the Medea hypothesis applies not just to our planet its dire prognosis extends to all potential life in the universe Yet life on Earth doesn't have to be lethal Ward shows why but warns that our time is running out Breathtaking in scope *The Medea Hypothesis* is certain to arouse fierce debate and radically transform our worldview It serves as an urgent challenge to all of us to think in new ways if we hope to save ourselves from ourselves

The Ozone Dilemma David E. Newton, 1995-07 Here in one single unbiased volume are the views and opinions that will shape the world's approach to the ozone dilemma for years to come Important scientific studies significant papers and international conferences are detailed as are national and international laws and regulations pertaining to emissions and chemical pollutants Biographical sketches of researchers and scientists who helped bring the issue of ozone depletion to the forefront of environmental concerns are included

to safely breast feed their infants The polar stratospheric ozone has been devastated by emissions of chlorofluorocarbons CFCs and new scientific findings connect global warming near the Earth s surface to significant cooling in the stratosphere This synergy aggravates ozone depletion because the chemical reactions that destroy the ozone become more energetic as temperatures drop Synthetic toxins have taken their toll on minority ethnic groups in the United States and persistent organic pollutants have inflicted physiological damage on humans and other animals Finally Johansen explores the estrogenic effects of such chemicals Sperm counts have declined as much as 50% in 50 years
