Primary Afferent Neuron A Survey Of Recent Morpho Functional Aspects:

The Primary Afferent Neuron Wolfgang Zenker, Winfried L. Neuhuber, 2012-12-06 This book is based on contributions presented at the symposium The Primary Afferent Neuron A survey of recent morpho functional aspects held in Zurich on March 24th 1988 in connection with the 83rd Congregation of the German Anatomical Society Members of the Anatomical Society as well as non member researchers were invited to join a circle of specialists to discuss the topic of primary afferents In addition some aspects which had not been dealt with at the Symposium because of shortage of time are represented by invited reviews included in this volume As scientific research on the primary afferent neuron is so extensive it is impossible to take inventory of all the present activities on this subject This book attempts to provide an overview of various aspects of high actuality and in particular shows how morphological research contributes to our present day concepts of the primary afferent neuron Although fundamental knowledge on morphology and physiology of the spinal ganglion cell seems to be well established many questions of the past and the present still await conclusive answers Thus many question marks determine the conceptual layout of this book Fig 1 First the peripheral sensory field and in particular the peripheral sensory receptors are discussed

Functional Neuroanatomy of Pain K.G. Usunoff, A. Popratiloff, Oliver Schmitt, Andreas Wree, 2006-02-27 Pain is an unpleasant but very important biological signal for danger Nociception is necessary for survival and maintaining the integrity of the organism in a potentially hostile environment Pain is both a sensory experience and a perceptual metaphor for damage and it is activated by noxious stimuli that act on a complex pain sensory apparatus However chronic pain having no more a protective role can become a ruining disease itself termed neuropathic pain

Neuronal Activity in Tumor Tissue Kurt S. Zänker, Frank Entschladen, 2007-01-01 This book summarizes the current knowledge on how tumors interact with the nervous system and what impact this might have for the progression and treatment of cancer It begins with an introduction to the organization and physiology of the nervous system especially of the peripheral nervous system with its high degree of plasticity Subsequent chapters discuss the interaction

between peripheral nerves and tumor cells the so called neuro neoplastic synapse with regard to carcinogenesis predictive tumor markers tumor growth and tumor progression leading to metastasis In this part the concept of neoneurogenesis is postulated as a process by which the tumor regulates its own innervation through the release of neurotrophic factors in analogy to the process of neoangiogenesis discovered three decades ago Once nerve endings have grown into the tumor these can release neurotransmitters which promote tumor cell migration and metastasis development The final chapters reflect on the role of stem cells in neoneurogenesis and consider pharmacological approaches for the inhibition of neuro neoplastic interactions as a basis for new anticancer therapies Targeted primarily at investigators in experimental and clinical oncology this book is also of special interest to neurobiologists as well as developmental and cell biologists

Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 Sensory Neurons Sheryl A. Scott,1992 Vertebrate sensory neurons occupy a unique place in the nervous system conveying information from the periphery to the CNS While sensory physiologists have long recognized differences in response properties among cells in dorsal root and cranial ganglia the full extent of heterogeneity among these neurons has only recently become apparent Phenotypic diversity is the underlying theme of this unique work which summarizes our current understanding of the individual characteristics and development of sensory neurons The chapters are arranged in three cohesive sections The first describes heterogeneity in the function biochemical make up ion channels membrane properties and central projection patterns of dorsal root ganglion neurons The second section discusses the development of sensory neurons covering such topics as the origins of dorsal root and cranial ganglia adhesive interactions involved in axon outgrowth trophic dependence of sensory neurons and the development of the physiological properties and central and peripheral connections of dorsal root ganglion neurons The last section explains regeneration and plasticity of mature neurons including sprouting of skin sensory axons plasticity in central terminations axotomy and regeneration and the continuing role of neurotrophic factors in adult neurons *Sensory Evolution on the Threshold* J. G. M. Thewissen,Sirpa Nummela,2008-02-04 Ranging from crocodiles and penguins to seals and whales this synthesis explores the function and evolution of sensory systems in animals whose ancestors lived on land It explores the dramatic transformation of smell taste sight hearing and balance that occurred as lineages of reptiles birds and mammals returned to aquatic environments The Rat Nervous System George Paxinos,2004-05-05 This third edition of the standard reference on the nervous system of the rat is a complete and updated revision of the 1994 second edition All chapters have been extensively updated and new chapters added covering early segmentation growth factors and glia The book is now aligned with the data available in the Rat Brain in Stereotaxic Coordinates making it an excellent companion to this bestselling atlas Physiological data functional concepts and correlates to human anatomy and function round out the new edition Designed to be used in conjunction with the bestselling Rat Brain in Stereotaxic Coordinates New to this edition is inclusion of physiological data functional concepts and
