Suero, Vicente Orozco-Sevilla, Ourania Preventza, Marc R. Moon, Joseph S. Coselli, Subhasis Chatterjee, 2023-01-06 In this review the authors discuss the perioperative management of patients who undergo thoracoabdominal aortic aneurysm or descending thoracic aortic aneurysm repair All major organ systems are potentially

vulnerable to complications from these repairs meticulous preoperative attention to optimizing relevant comorbidities diligent performance of intraoperative anesthetic and surgical techniques and careful postoperative management are necessary to maximize the likelihood of successful outcomes Specific attention should be given to reducing the risk for spinal cord ischemia and for paraplegia Of note renal and respiratory systems are especially vulnerable to major complications and require a thoughtful multidisciplinary approach Because preventing complications is the primary goal of perioperative management deviations from the normal course must be recognized promptly and addressed aggressively to reduce the likelihood of major morbidity and death

Computed Tomography of the Coronary Arteries Mårten Sandstedt, 2020-10-20 Computed tomography CT is an increasingly used modality for investigations of patients with suspected coronary artery disease CAD Technical advances could improve diagnostic accuracy and lead to clinical workflow improvements Also more prognostic information can optimize clinical follow up strategies and treatments The general aim of this thesis was to explore the use of CT for CAD investigations Three studies aimed to examine new technologies including the evaluation of an on site computed tomography based fractional flow reserve CT FFR software study I the evaluation of an AI based calcium scoring computed tomography CSCT software study III and the evaluation of an photon counting detector PCD CT study IV One study aimed to evaluate the long term prognostic value of coronary computed tomography angiography CCTA in symptomatic patients with no history of CAD study II The software evaluation studies study I and III and the prognostic study study II utilized CT data from clinical patients while the PCD CT evaluation study study IV used CT data from cadaveric specimens The performances of both software programs were compared with standard references being represented by fractional flow reserve FFR measurements study I and coronary artery calcification CAC scores from a semi automatic software study III respectively The PCD CT performance on CAC quantification was compared with corresponding results from an energy integrating detector EID CT using micro CT as the standard reference study IV The prognostic study merged registries to identify major adverse cardiac

events MACE having a follow up time of up to 7.5 years study II The CT FFR and CSCT software correlation and agreement to corresponding standard references were good and excellent respectively Also both software programs had time saving potential study I and III The CAC quantification was more accurate using PCD CT than EID CT study IV The prognosis was excellent in patients with normal coronary arteries and progressively impaired in non obstructive and obstructive CAD study II The results in this thesis convey developmental technical CT technology advances for CAD investigations In addition prognostic follow up data is communicated The results may benefit patients by an increased accuracy in the CT evaluation of CAD and can contribute to improve clinical follow up strategies Furthermore the results suggest possibilities to improve the workflow in clinical radiology which potentially could impact health care costs
