

Types of Radionuclide Generators

1. Technetium Generators: Technetium-99m ($Tc-99m$) generators are the most widely utilized radionuclide generators in nuclear medicine.

Production: $Tc-99m$ is produced from the decay of its parent isotope, molybdenum-99 ($Mo-99$), which has a longer half-life.

Importance: $Tc-99m$ is a versatile radioisotope used in various diagnostic imaging procedures, including myocardial perfusion imaging, bone scans, and imaging of the liver, kidneys, and thyroid.

Advantages: Technetium generators provide a convenient and cost-effective method for producing $Tc-99m$ on-site, allowing for on-demand availability of this crucial radioisotope for medical imaging studies.

The Development of New Radionuclide Generator Systems for Nuclear Medicine Applications, 1991

Radioisotope generator systems have traditionally played a central role in nuclear medicine in providing radioisotopes for both research and clinical applications. In this paper the development of several tungsten 188 rhenium 188 prototype generators which provide rhenium 188 for radioimmunotherapy RAIT is discussed. The authors have recently demonstrated that carrier free iridium 194 can be obtained from the activated carbon system from decay of reactor produced osmium 194 for potential RAIT applications. Instrumentation advances such as the new generation of high count rate fast gamma camera systems for first pass technology require the availability of generator produced ultra short lived radioisotopes for radionuclide angiography RNA. The activated carbon generator is an efficient system to obtain ultra short lived iridium 191 m from osmium 191 for RNA. In addition the growing number of PET centers has stimulated research in generators which provide positron emitting radioisotopes. Copper 62 obtained from the zinc 62 generator is currently used for PET evaluation of organ perfusion. The availability of the parent radioisotopes, the fabrication and use of these generators and the practical factors for use of these systems in the radiopharmacy are discussed. 74 refs, 6 figs, 5 tabs. Progress in Radiopharmacy August P. Schubiger, Gerrit Westera, 2012-12-06. This book is a compilation of the invited papers which were presented at the Fourth European Symposium on Radiopharmacy and Radiopharmaceuticals which was held in Baden Switz land 1-4 May 1991. The First and Third Symposia on Radiopharmacy and Radiopharmaceuticals, Elsinore Denmark 1983, 1987 concentrated on the safety and efficacy of radiopharmaceuticals, whereas this Fourth Symposium to some extent followed up the subject of the Second Symposium, Cambridge UK 1985, recent developments in radiopharmacy and current research on radiopharmaceuticals. The symposium was organized by the Radiopharmacy Group of the Swiss Society of Medical Radiology, Section Nuclear Medicine, under the auspices of the task group on radiopharmaceuticals of the European Association of Nuclear Medicine (EANM). The organizing committee consisted of the cochairmen Drs P. A. Schubiger, Paul Scherrer Institute, PSI, Villigen and G. Westera, University Hospital, Zürich and the members H. F. Beer, P. Blauenstein, P. Hasler, all PSI and H. M. Icke, Cantonal Hospital, Basel. The subjects of this Symposium ranged from isotope production to clinical testing of radiopharmaceuticals, including the organisational prerequisites. In addition, the development of new radiopharmaceuticals and of PET radiopharmacy and the concomitant ongoing evolution of regulatory guidelines by national, various European countries, USA and international EC authorities induced us to honor the vivid interest in this subject and to make it an important part of this symposium. **Publications of Los Alamos Research**
