Regeneration Of Vertebrate Sensory Receptor Cells:

Regeneration of Vertebrate Sensory Receptor Cells Gregory R. Bock, Julie Whelan, 2008-04-30 An international group of leading investigators discuss recent progress of sensory structures in lower and higher vertebrates Experts in two relevant fields the cell cycle and mitogenic growth factors present insightful contributions in the search for precursors and or stem cells in each sense organ plus the signals which regulate those precursors differentiation both in normal development and regeneration

The Biology of Hagfishes Jørgen Mørup Jørgensen, J.P. Lomholt, R.E. Weber, H. Malte, 2012-12-06 The hagfishes comprise a uniform group of some 60 species inhabiting the cool or deep parts of the oceans of both hemispheres They are considered the most primitive representatives of the group of craniate chordates which apart from the hagfishes that show no traces of verte brae includes all vertebrate animals Consequently the hagfishes have played and still play a central role in discussions concerning the evolution of the vertebrates Although most of the focus on hagfishes may be the result of their being primitive it should not be forgotten that at the same time they are specialized animals with a unique way of life that is interesting in its own right It is now more than 30 years since a comprehensive treatise on hagfishes was published The Biology of Myxine edited by Alf Brodal and Ragnar Fange Universitetsforlaget Oslo 1963 provided a wealth of information on the biology of hagfishes and over the years remained a major source of information and inspiration to students of hagfishes

Growth Factors as Drugs for Neurological and Sensory Disorders Gregory R. Bock, Jamie A. Goode, 2008-04-30 Degeneration of sensory receptors or of the nerves innervating them leads to a sensory deficit Various strategies have been tried for promoting regrowth of sensory receptors particularly in the eye and ear The latest data from experimental studies in animals are presented in the book including applications of BDNF and CNTF in the eye and epidermal growth factor in the ear

Histology for Pathologists Stacey Mills, 2019-02-01 Filled with more than 1 000 images the latest edition of this award winning comprehensive classic written by anatomic pathologists for anatomic pathologists has been updated with new information on surgical principles and techniques Like previous editions the book is designed to bridge the gap between normal histology and pathologic alterations

Histology for Pathologists Stacey E. Mills, 2012-07-16 A strong grounding in basic histology is essential for all pathologists However there had always been a gap between histology and pathology in which histologic information specifically for the pathologist was often lacking Histology for Pathologists deals with the microscopic features of normal human tissues from the perspective of the surgical pathologist This is the only text that uses human vs animal tissues for the histology It is the best reference in the literature for information on normal histology and as such is essential for all clinical pathologists Written by pathologists for pathologists the new edition updates the pathologist s understanding of normal histology up to date with the incremental advances made in the last five years The 3rd edition has become a classic purchased by virtually all residents beginning their pathology training as well as pathologists in practice The 4th edition builds on that substantial foundation The table of contents remains

Animal Models in Eye Research ,2011-04-28 The eye is a complex sensory organ which enables visual perception of the world Thus the eye has several tissues that do different tasks One of the most basic aspects of eye function is the sensitivity of cells to light and its transduction through the optic nerve to the brain Different organisms use different ways to achieve these tasks In this sense eye function becomes a very important evolutionary aspect as well This book presents the different animal models that are commonly used for eye research and their uniqueness in evaluating different aspects of eye development evolution physiology and disease Presents information on the major animal models used in eye research including invertebrates and vertebrates Provides researchers with information needed to choose between model organisms Includes an introductory chapter on the different types of eyes stressing possible common molecular machinery

Vomeronasal Chemoreception In Vertebrates: A Study Of The Second Nose Charles Evans,2003-07-02 The Vomeronasal Organ is an olfactory structure in the nose originally described in 1813 by the Danish court veterinarian Ludwig Jacobson After some 150 years interest in it was reawakened following the discovery of its key role in social and sexual responses The organ serves to alert the emotional brain to the presence of specific semiochemicals or signal molecules which identify sex or status Typically such scents elicit responses at a non conscious level altering internal chemistry hormones in reaction to odours from the social environment pheromones The importance of vomerolfaction has recently been confirmed by findings on the genetic basis of smell This book surveys the biology of the Organ of Jacobson from toads to tamarins It provides an analysis of the neural pathway which processes pheromonal information delivered by the second nose to the brain Vomeronasal olfaction is examined in its evolutionary perspective from molecular capture of scents to the consequent changes in reproductive activity The treatment integrates structural and functional aspects with the system s development and considers the implications of its unique genome The student or researcher is lead up to the edge of contemporary thinking by an overview of vomerolfactory contributions to individual survival and to population dynamics The issues raised by recent research are evaluated in relation to the properties of primary olfaction Questions posed by the persistence of vomerolfaction as a distinct sense are explored for man and other higher primates
