Semidistributive Modules and Rings A.A. Tuganbaev, 2012-12-06 A module M is called distributive if the lattice $\text{Lat } M$ of all its submodules is distributive i.e. $F \cap G = (F \cap H) \cap (F \cap G/H)$ for all submodules F, G and H of the module M A module M is called uniserial if all its submodules are comparable with respect to inclusion i.e. the lattice $\text{Lat } M$ is a chain Any direct sum of distributive resp uniserial modules is called a semidistributive resp serial module The class of distributive resp semidistributive modules properly contains the class of all uniserial resp serial modules In particular all simple resp semisimple modules are distributive resp semidistributive All strongly regular rings for example all factor rings of direct products of division rings and all commutative regular rings are distributive all valuation rings in division rings and all commutative Dedekind rings e.g. rings of integral algebraic numbers or commutative principal ideal rings are distributive A module is called a Bezout module or a locally cyclic module if every finitely generated submodule is cyclic If all maximal right ideals of a ring A are ideals e.g. if A is commutative then all Bezout A modules are distributive

Algebras, Rings and Modules Michiel Hazewinkel, Nadiya Gubarenko, V.V. Kirichenko, 2006-01-18 Associative rings and algebras are very interesting algebraic structures In a strict sense the theory of algebras in particular noncommutative algebras originated from a single example namely the quaternions created by Sir William R. Hamilton in 1843 This was the first example of a noncommutative numbers system During the next forty years mathematicians introduced other examples of noncommutative algebras began to bring some order into them

and to single out certain types of algebras for special attention Thus low dimensional algebras division algebras and commutative algebras were classified and characterized The first complete results in the structure theory of associative algebras over the real and complex fields were obtained by T Molien E Cartan and G Frobenius Modern ring theory began when J H Wedderburn proved his celebrated classification theorem for finite dimensional semisimple algebras over arbitrary fields Twenty years later E Artin proved a structure theorem for rings satisfying both the ascending and descending chain condition which generalized Wedderburn structure theorem The Wedderburn Artin theorem has since become a cornerstone of noncommutative ring theory The purpose of this book is to introduce the subject of the structure theory of associative rings This book is addressed to a reader who wishes to learn this topic from the beginning to research level We have tried to write a self contained book which is intended to be a modern textbook on the structure theory of associative rings and related structures and will be accessible for independent study

Algebras, Rings and Modules, Volume 2 Michiel

Hazewinkel, Nadiya M. Gubarenis, 2017-04-11 The theory of algebras rings and modules is one of the fundamental domains of modern mathematics General algebra more specifically non commutative algebra is poised for major advances in the twenty first century together with and in interaction with combinatorics just as topology analysis and probability experienced in the twentieth century This is the second volume of Algebras Rings and Modules Non commutative Algebras and Rings by M Hazewinkel and N Gubarenis a continuation stressing the more important recent results on advanced topics of the structural theory of associative algebras rings and modules

Modules over Discrete Valuation Rings Piotr A. Krylov, Askar A.

Tuganbaev, 2018-09-24 This book provides the first systematic treatment of modules over discrete valuation domains which play an important role in various areas of algebra especially in commutative algebra Many important results representing the state of the art are presented in the text along with interesting open problems This updated edition presents new approaches on p -adic integers and modules and on the determinability of a module by its automorphism group Contents Preliminaries Basic facts Endomorphism rings of divisible and complete modules Representation of rings by endomorphism rings Torsion free modules Mixed modules Determinacy of modules by their endomorphism rings Modules with many endomorphisms or automorphisms

Handbook of Algebra M. Hazewinkel, 2000-04-06 Handbook of Algebra

Distributive Modules and Related Topics Askar Tuganbaev, 1999-08-19 A comprehensive introduction to the homological and structural methods of ring theory and related topics this book includes original results as well as the most recent work in the field It is unique in that it concentrates on distributive modules and rings an area in which the author is recognized as one of the world's leading experts A module is said to be distributive if the lattice of its submodules is distributive Distributive rings are exemplified by factor rings of direct products of division rings commutative semihereditary rings and uniserial rings Direct sums of distributive modules are studied in detail as well as relations with flat modules and modules whose endomorphisms could be extended or lifted Starting from a basic understanding of linear algebra the theory is presented and accompanied by

complete proofs A number of exercises are also included to give further insight into the topics covered and to draw attention to relevant results in the literature This detailed and comprehensive book will be an invaluable source of reference to researchers and specialists in this area *Cyclic Modules and the Structure of Rings* S.K. Jain,Ashish K. Srivastava,Askar A. Tuganbaev,2012-09-27 This unique monograph brings together important material in the field of noncommutative rings and modules It provides an up to date account of the topic of cyclic modules and the structure of rings which will be of particular interest to those working in abstract algebra and to graduate students who are exploring potential research topics

Arithmetical Rings and Endomorphisms Askar Tuganbaev,2019-06-04 This book offers a comprehensive account of not necessarily commutative arithmetical rings examining structural and homological properties of modules over arithmetical rings and summarising the interplay between arithmetical rings and other rings whereas modules with extension properties of submodule endomorphisms are also studied in detail Graduate students and researchers in ring and module theory will find this book particularly valuable **Free Ideal Rings and Localization in General Rings** P. M. Cohn,2006-06-08

Proving that a polynomial ring in one variable over a field is a principal ideal domain can be done by means of the Euclidean algorithm but this does not extend to more variables However if the variables are not allowed to commute giving a free associative algebra then there is a generalization the weak algorithm which can be used to prove that all one sided ideals are free This book presents the theory of free ideal rings first in detail Particular emphasis is placed on rings with a weak algorithm exemplified by free associative algebras There is also a full account of localization which is treated for general rings but the features arising in fir are given special attention Each section has a number of exercises including some open problems and each chapter ends in a historical note Ring Constructions and Applications Andrei V. Kelarev,2002 This

book contains the definitions of several ring constructions used in various applications The concept of a groupoid graded ring includes many of these constructions as special cases and makes it possible to unify the exposition Recent research results on groupoid graded rings and more specialized constructions are presented In addition there is a chapter containing open problems currently considered in the literature Ring Constructions and Applications can serve as an excellent introduction for graduate students to many ring constructions as well as to essential basic concepts of group semigroup and ring theories used in proofs Contents Preliminaries Graded Rings Examples of Ring Constructions The Jacobson Radical Groups of Units Finiteness Conditions PI Rings and Varieties Gradings of Matrix Rings Examples of Applications Open Problems Readership Graduate students and researchers using ring constructions in their work *Groups, Rings, Lie and Hopf Algebras*

,2003-03-31 The volume is almost entirely composed of the research and expository papers by the participants of the International Workshop Groups Rings Lie and Hopf Algebras which was held at the Memorial University of Newfoundland St John s NF Canada All four areas from the title of the workshop are covered In addition some chapters touch upon the topics which belong to two or more areas at the same time Audience The readership targeted includes researchers graduate and

senior undergraduate students in mathematics and its applications

Formal Matrices Piotr Krylov, Askar

Tuganbaev, 2017-03-30 This monograph is a comprehensive account of formal matrices examining homological properties of modules over formal matrix rings and summarising the interplay between Morita contexts and K theory While various special types of formal matrix rings have been studied for a long time from several points of view and appear in various textbooks for instance to examine equivalences of module categories and to illustrate rings with one sided non symmetric properties this particular class of rings has so far not been treated systematically Exploring formal matrix rings of order 2 and introducing the notion of the determinant of a formal matrix over a commutative ring this monograph further covers the Grothendieck and Whitehead groups of rings Graduate students and researchers interested in ring theory module theory and operator algebras will find this book particularly valuable Containing numerous examples Formal Matrices is a largely self contained and accessible introduction to the topic assuming a solid understanding of basic algebra

Endomorphism Rings of Abelian Groups P.A. Krylov, Alexander V. Mikhalev, A.A. Tuganbaev, 2013-06-29 Every Abelian group can be related to an associative ring with an identity element the ring of all its endomorphisms Recently the theory of endomorphism rings of Abelian groups has become a rapidly developing area of algebra On the one hand it can be considered as a part of the theory of Abelian groups on the other hand the theory can be considered as a branch of the theory of endomorphism rings of modules and the representation theory of rings There are several reasons for studying endomorphism rings of Abelian groups first it makes it possible to acquire additional information about Abelian groups themselves to introduce new concepts and methods and to find new interesting classes of groups second it stimulates further development of the theory of modules and their endomorphism rings The theory of endomorphism rings can also be useful for studies of the structure of additive groups of rings E modules and homological properties of Abelian groups The books of Baer 52 and Kaplansky 245 have played an important role in the early development of the theory of endomorphism rings of Abelian groups and modules Endomorphism rings of Abelian groups are much studied in monographs of Fuchs 170 172 and 173 Endomorphism rings are also studied in the works of Kurosh 287 Arnold 31 and Benabdallah 63

Rings Close to Regular

A.A. Tuganbaev, 2013-03-09 Preface All rings are assumed to be associative and except for nilrings and some stipulated cases to have nonzero identity elements A ring A is said to be regular if for every element $a \in A$ there exists an element $b \in A$ with $aba = a$ Regular rings are well studied For example 163 and 350 are devoted to regular rings A ring A is said to be *tr* regular if for every element $a \in A$ there is an element $n \in A$ such that $anba$ for some positive integer n A ring A is said to be strongly *tr* regular if for every $a \in A$ there is a positive integer n with $n \geq 1$ $an \in A$ $a^n \in A$ It is proved in 128 that A is a strongly *tr* regular ring if and only if for every element $a \in A$ there is a positive integer m with $m \geq 1$ $a^m \in A$ Every strongly *tr* regular ring is *tr* regular 38 If F is a division ring and M is a right vector space with infinite basis e_i then $\text{End } M$ is a regular and *tr* regular ring that is not strongly *tr* regular The factor ring of the ring of integers with respect to the ideal generated by the integer 4 is a strongly *tr* regular ring that is not regular

The Concise Handbook of Algebra Alexander V. Mikhalev, G.F. Pilz, 2013-06-29 It is by no means clear what comprises the heart or core of algebra the part of algebra which every algebraist should know Hence we feel that a book on our heart might be useful We have tried to catch this heart in a collection of about 150 short sections written by leading algebraists in these areas These sections are organized in 9 chapters A B I Of course the selection is partly based on personal preferences and we ask you for your understanding if some selections do not meet your taste for unknown reasons we only had problems in the chapter Groups to get enough articles in time We hope that this book sets up a standard of what all algebraists are supposed to know in their chapters interested people from other areas should be able to get a quick idea about the area So the target group consists of anyone interested in algebra from graduate students to established researchers including those who want to obtain a quick overview or a better understanding of our selected topics The prerequisites are something like the contents of standard textbooks on higher algebra This book should also enable the reader to read the big Handbook Hazewinkel 1999 and other handbooks In case of multiple authors the authors are listed alphabetically so their order has nothing to do with the amounts of their contributions

Invariance of Modules under Automorphisms of their Envelopes and Covers Ashish K. Srivastava, Askar

Tuganbaev, Pedro A. Guil Asensio, 2021-03-18 The theory of invariance of modules under automorphisms of their envelopes and covers has opened up a whole new direction in the study of module theory It offers a new perspective on generalizations of injective pure injective and flat cotorsion modules beyond relaxing conditions on liftings of homomorphisms This has set off a flurry of work in the area with hundreds of papers using the theory appearing in the last decade This book gives the first unified treatment of the topic The authors are real experts in the area having played a major part in the breakthrough of this

new theory and its subsequent applications The first chapter introduces the basics of ring and module theory needed for the following sections making it self contained and suitable for graduate students The authors go on to develop and explain their tools enabling researchers to employ them extend and simplify known results in the literature and to solve longstanding problems in module theory many of which are discussed at the end of the book
