Longevity To The Limits And Beyond:

Longevity: To the Limits and Beyond Jean-Marie Robine, James W. Vaupel, Bernard Jeune, Michel Allard, 2012-12-06
Why longevity For a number of years the Fondation IPSEN has been devoting considerable effort to the various aspects of ageing not only to age related diseases such as Alzheimer's but also to the Centenarians the paragon of positive ageing The logical continuation of this approach is to address the question of longevity in global terms Behind the extreme values what span is accessible to all of us and likely to directly concern most of our contemporaries The individual and collective increase in the duration of life is one of the most striking phenomena of our time It could be one of the most significant events in the bio social history of humanity The increase in life expectancy at old age which started a few decades ago only is going on The most well advised observer had not foreseen or even dared hope for this increase which will drastically affect our everyday life our habits and our behavior In the fragment of human history we are living in it is our responsibility to deal with this major transformation for the species Such a transformation needs an effort from all to adapt to the new conditions This transformation has to be managed rather than simply experienced anticipated rather than followed in order to avoid any attempt to pervert this major step forward All that was present during the first symposium of the new series on longevity of the Colloques Medecine et Recherche convened by the Fondation IPSEN

Beyond Longevity Jason Prall, 2023-12-26
Features new science that updates the blue zones secrets to healthy happy longevity with a flexible holistic approach that incorporates epigenetics nutrition and mental health Through his documentary film series The Human Longevity Project Jason Prall traveled to select regions around the world known for their long lived healthy populations He sought to understand not only the longevity secrets of these societies but also the scientific basis underpinning their health wisdom Through his travels he came to the realization that while the pursuit of longevity is sexy it's insufficient and hollow what most of us really want is an extended life filled with vibrant health meaning and purpose We want to thrive as we age This book combines his own personal experiences with the knowledge and wisdom gained from interviewing more than 100 health experts and dozens of amazing elders from around the world You'll discover that when experiential wisdom is supported by the latest scientific research a more integrated picture emerges of how you can most effectively increase your happiness health and longevity Life is a mysterious process with a natural development order and cycle It is lent to us for a brief moment before the physical body is left behind If we wish to thrive in the modern world we must create a mental emotional physical and energetic environment that is congruent with this natural life cycle The reality that humanity has created filled with next generation technologies and increasing comforts presents both unique opportunities and novel challenges We have the option to choose a more harmonious path that establishes greater coherence within ourselves one another and the environment This is the amazing opportunity that lies before us When we live from alignment all life benefits

The Demography and Epidemiology of Human Health and Aging Jacob S. Siegel, 2011-09-30 With this book Siegel an internationally known demographer and gerontologist has made a unique contribution to the fledgling fields of health demography and the demography and epidemiology of aging The book represents a felicitous union of epidemiology gerontology and demography and appears to be the first and only comprehensive text on this subject now available Drawing on a wide range of sciences in addition to demography gerontology and epidemiology including medical sociology biostatistics public policy bioethics and molecular biology the author treats theoretical and applied issues links methods and findings covers the material internationally nationally and locally and while focusing on the elderly treats the entire life course The methods materials and perspectives of demography and epidemiology are brought to bear on such topics as the prospects for future increases in human longevity the relative contribution of life style environment genetics and chance in human longevity the measurement of the share of healthy years in total life expectancy the role of population growth in the rising costs of health care and the applications of health demography in serving the health needs of local communities The separate chapters systematically develop the topics of the sources and quality of health data mortality life tables and the measurement of health status the interrelationships of health on the one hand and mortality fertility migration and age structure on the other health conditions in the less developed countries the concepts and theories of aging and projections of the aged population and local health applications public health policy and bioethical issues in health demography Given its comprehensiveness clarity interdisciplinary scope and authenticity this book appeals to a wide range of users from students and teachers of medical sociology the demography of aging and public health studies to practitioners in these areas both as a text in health demography and the demography epidemiology of aging and as a reference work in these fields

What Price Better Health? Daniel Callahan, Milbank Memorial Fund, 2003-10-06 Medical research with its power to attract money and political support and its promise of cures for a wide range of medical burdens has good and bad sides which are often indistinguishable In this book the author teases out the distinctions and differences revealing the difficulties that result when the research imperative is suffused with excessive zeal adulterated by the profit motive or used to justify cutting moral corners Exploring the National Institutes of Health's annual budget the inflated estimates of health care cost savings that result from research the high prices charged by drug companies the use and misuse of human subjects for medical testing and the controversies surrounding human cloning and stem cell research he clarifies the fine line between doing good and doing harm in the name of medical progress His work shows that medical research must be understood in light of other social and economic needs and how even the research imperative dedic

The Longevity Code Olivia Parker, 2024-10-11

The Longevity Code presents a fascinating exploration of the science behind aging and the potential to extend our healthspan. This comprehensive guide delves into three key areas: genetic factors, lifestyle choices, and emerging medical technologies that influence longevity. By examining cutting edge research in gerontology, the book challenges the notion that aging is an uncontrollable process and offers readers practical strategies to potentially add healthy years to their lives. The book's unique approach lies in its ability to translate complex scientific concepts into actionable advice. It covers intriguing topics such as longevity genes, epigenetic modifications, and the impact of diet and exercise on aging. For instance, readers will learn about the role of telomeres in cellular aging and how lifestyle choices can influence their length. The author also explores promising developments in senolytic drugs and stem cell therapies, providing a glimpse into the future of anti-aging interventions. Progressing from genetic factors to lifestyle choices and finally to emerging technologies, The Longevity Code offers a well-structured journey through the multifaceted world of longevity science. By combining scientific rigor with accessibility, this book serves as an invaluable resource for health-conscious individuals and professionals alike, empowering them with knowledge to make informed decisions about their health and longevity.

Pathways to the Development of the Aging Phenotype John Papaconstantinou, Pathways to the Development of the Aging Phenotype explores the journey that all living things must eventually take. Using the definition that aging is a multifactorial syndrome caused by multiple pathophysiological processes that occur simultaneously in multiple tissues of the aged, Dr. John Papaconstantinou provides a holistic look at aging: its causes, how it presents, and how aging syndromes can be treated. In addition, this book offers a deeper look at the effects of aging on individual organs. The aging heart, skeletal muscle, eye, skin, kidney, intestine, liver, pancreas, and adipose tissue are all covered, as well as an examination of the aging brain and neurodegenerative diseases such as Alzheimer's, ALS, Parkinson's, and Huntington's disease. Other important subjects covered are the effects of social isolation and loneliness on aging, as well as the effects of sleep and other lifestyle choices. Throughout the book, Dr. Papaconstantinou provides information on current and promising research on aging and the treatment of aging syndromes, as well as the recent exciting work on tissue regeneration that suggests aged tissues and organs can be reprogrammed to a juvenile phenotype. Pathways to the Development of the Aging Phenotype is an exciting addition to scientific and medical literature related to aging and will be an invaluable resource for medical students, professionals, and researchers looking to expand their knowledge in this field.

A Protocol to Determine Seed Storage Behaviour T. D. Hong, R. H. Ellis, 1996. This publication provides an approach by which conservationists can determine whether or not long-term seed storage is feasible for a particular species, i.e. whether or not that species shows orthodox seed storage behaviour, and provides advice on the implementation of the protocol, examples of ways in which the results from seed storage studies could be misinterpreted due to confounding factors, as well as several alternative approaches for estimating seed storage behaviour prior to carrying out actual investigations with the seeds. In particular, the latter section introduces the concept of a

O'Neill, Deborah Balk, 2001 Human Senescence Douglas E. Crews, 2003-12-11 Much research on the biology of senescence is on cell lines nematodes or fruit flies that are only of peripheral relevance to the problems encountered in humans Human Senescence is a text which reviews the evolutionary biology of human senescence and life span and the evolutionarily recent development of late life survival It examines how human patterns of and variability in growth and development have altered later life survival probabilities and competencies and how survival during mid life contributes to senescent dysfunction and alteration Discussing possibilities of further extending human life span it gives a better understanding of how humans came to senesce as slowly as we do over our lifespan Bringing together gerontological anthropological and biocultural research it explores human variation in chronic disease senescence and life span as outcomes of early life adaptation and the success of humankind s sociocultural evolution It is a benchmark publication for all interested in how and why we age **Neuronal Inputs and Outputs of Aging and Longevity** Joy Alcedo, Thomas Flatt, Elena G.

Pasyukova, 2013-08-23 An animal s survival strongly depends on its ability to maintain homeostasis in response to the changing quality of its external and internal environments This is achieved through intercellular communication not only within a single tissue but also among different tissues and organ systems Thus alterations in tissue to tissue or organ to organ communications which are under genetic regulation can affect organismal homeostasis and consequently impact the aging process One of the organ systems that play a major role in maintaining homeostasis is the nervous system Considering that the nervous system includes the sensory system which perceives the complexity of an animal s environment it should be

no surprise that there would be a sensory influence on homeostasis and aging To promote homeostasis any given sensory information is transmitted through short range signals via neural circuits and or through long range endocrine signals to target tissues which may in turn be neuronal or non neuronal in nature At the same time since homeostasis involves a number of feedback mechanisms non neuronal tissues can also modulate sensory and other neuronal functions Several genes that regulate signaling pathways known to affect homeostasis and aging have been shown to act in neurons in tissues that are likely downstream targets of the nervous system or through feedback regulation of neuronal activities These genes can have different temporal requirements some might function early e g by affecting neural development while others may only be required later in adulthood Some well known examples of genes involved in the neuronal regulation of homeostasis and longevity encode components of the evolutionarily conserved nutrient sensing insulin like signaling pathway the stress sensing internal repair system and the mitochondrial electron transport chain Indeed the genetic perturbation of these pathways has been found to lead to numerous diseases many of which are age related and involve the nervous system such as neurodegeneration and the metabolic syndrome Despite much progress however many aspects of the neuronal inputs and outputs that affect aging and longevity are poorly understood to date For example the precise neuronal and non neuronal circuitries and the details of the molecular mechanisms through which genes signaling pathways maintain homeostasis and affect aging in response to the environment remain to be elucidated Similarly it is presently unclear whether genes that regulate the early development of the nervous system and its consequent circuitry influence homeostasis and longevity during adulthood At the same time although many genes affecting aging are conserved both the nervous system and the aging process are highly variable within populations and among taxa Accordingly the role of natural genetic variation in shaping the neurobiology of aging is also presently unknown The aim of this Research Topic is therefore to highlight the genetic developmental and physiological aspects of the signaling networks that mediate the neuronal inputs and outputs that are required to maintain organismal homeostasis The elucidation of the effects of these neuronal activities on homeostasis may thus provide much needed insight into mechanisms that affect aging and longevity **MacMillan's Magazine** Sir
