The Empire of Climate David N. Livingstone, 2024-04-16 As the looming consequences of climate change increasingly dominate our visions of the future media coverage and public discourse often focus on how an altered climate will inevitably and unevenly reshape human life across the globe Amid predictions of mass displacement food shortages conflict over resources and widespread health problems many people are newly reckoning with a very old idea that the conditions of our climate will inexorably determine our future This book examines the intellectual architecture of the once widely trafficked belief that climate exerts an ineluctable power over the human species shaping everything from the wealth of nations to human health from the outbreak of hostilities to the evolution of the brain and mental wellbeing The book is organized around four themes health wealth war and mind Each section opens with contemporary anxieties about the influence of an altered climate before tracing the history of these fixations back to much earlier pronouncements on climate s influence Livingstone illustrates how the specter of climatic influence has been used variously to explain interpret and redraw the world and how it played a significant role in the development and justification of some of history s most destructive worldviews He cites examples where climate has been critically implicated in the politics of imperial control labor power and race relations to explain industrial development economic breakdown and market performance as a marker for national character and cultural collapse as an explanation for past warfare and civil conflict today and as a critical factor in psychological disorders patterns of suicide and the prevalence of acute psychosis The book overall traces a powerful set of ideas that has spanned human history and that continue to shape the modern world in various forms to this day

Design Of Intelligent Control Systems Based On Hierarchical Stochastic Automata Pedro Lima, George N Saridis, 1996-03-20 In recent years works done by most researchers towards building autonomous intelligent controllers frequently mention the need for a methodology of design and a measure of how successful the final result is This monograph introduces a design methodology for intelligent controllers based on the analytic theory of intelligent machines introduced by Saridis in the 1970s The methodology relies on the existing knowledge

about designing the different sub systems composing an intelligent machine Its goal is to provide a performance measure applicable to any of the sub systems and use that measure to learn on line the best among the set of pre designed alternatives given the state of the environment where the machine operates Different designs can be compared using this novel approach

Intelligent Learning Environments: The Case of Geometry Jean-Marie Laborde, 2012-12-06 This book is a thoroughly revised result updated to mid 1995 of the NATO Advanced Research Workshop on Intelligent Learning Environments the case of geometry held in Grenoble France November 13 16 1989 The main aim of the workshop was to foster exchanges among researchers who were concerned with the design of intelligent learning environments for geometry The problem of student modelling was chosen as a central theme of the workshop insofar as geometry cannot be reduced to procedural knowledge and because the significance of its complexity makes it of interest for intelligent tutoring system ITS development The workshop centred around the following themes modelling the knowledge domain modelling student knowledge design ing didactic interaction and learner control This book contains revised versions of the papers presented at the workshop All of the chapters that follow have been written by participants at the workshop Each formed the basis for a scheduled presentation and discussion Many are suggestive of research directions that will be carried out in the future There are four main issues running through the papers presented in this book knowledge about geometry is not knowledge about the real world and materialization of geometrical objects implies a reification of geometry which is amplified in the case of its implementation in a computer since objects can be manipulated directly and relations are the results of actions Laborde Schumann This aspect is well exemplified by research projects focusing on the design of geometric microworlds Guin Laborde

Human Assessment and Cultural Factors John W. Berry, S.H. Irvine, 2013-11-11 Against the background of NATO s Istanbul conference of 1971 Cronbach and Drenth 1972 the Kingston conference shows that great progress has been made by the community of cross cultural psychologists The progress is as much in the psychology of the investigators as in the investigations being reported In 1971 the investigators were mostly strangers to each other Behind their reports lay radically different field experiences disparate research traditions and mutually contradictory social ideals Istanbul was not a Tower of Babel but participants did speak past each other Now a community exists thanks to the meetings of NATO and the International Association for Cross Cultural Psychology to flourishing journals and the Triandis et al 1980 Handbook The members tend to know each other can anticipate how their formulations will fall on the ears of others and accept superficially divergent approaches as making up a collective enterprise Ten years ago there was open conflict between those who confronted exotic peoples with traditional tests and applied traditional interpretations to the responses and the relativists who insisted that tasks test taking and interpretation cannot be standardized in the ways that matter Today s investigators are conscious of the need to revalidate tasks carried into alien settings they often prefer to redesign the mode of presentation and to attune the subject to test taking They face the difficulties squarely and recognize that even the best

means of coping are only partially successful
