Evolution of the First Nervous Systems

Peter A.V. Anderson, 2013-11-11 This book represents the proceedings of a NATO Advanced Research Workshop of the same name held at St Andrews University Scotland in July of 1989 It was the first meeting of its kind and was convened as a forum to review and discuss the phylogeny of some of the cell biological functions that underlie nervous system function such matters as intercellular communication in diverse lower organisms and the electrical excitability of protozoans and cnidarians to mention but two The rationale behind such work has not necessarily been to understand how the first nervous systems evolved many of the animals in question provide excellent opportunities for examining general questions that are unapproachable in the more complex nervous systems of higher animals Nevertheless a curiosity about nervous system evolution has invariably pervaded much of the work The return on this effort has been mixed depending to a large extent on the usefulness of the preparation under examination For example work on cnidarians to many the keystone phylum in nervous system evolution simply because they possess the first nervous systems lagged behind that carried out on protozoans because the latter are large single cells and thus far more amenable to microelectrode based recording techniques Furthermore protozoans can be cultured easily and are more amenable to genetic and molecular analyses

Nervous Systems in Invertebrates M.A. Ali, 2012-12-06 The idea of holding an Advanced Study Institute ASI and getting a volume out on the Nervous Systems in Invertebrates first cropped up in the summer of 1977 at the ASI on Sensory Ecology I had prepared a review of the nervous systems in coelomates and noticed how much we depended on Bullock and Horridge s treatise on the one hand and how much new material and requirements has cropped up since 1965 when this classical work was published Interest in the concerted study of pollution and environmental toxicology was growing in geometrical proportions and the use of invertebrates as indices was growing As a teacher of a course on the biology of invertebrates since the beginning of my career I had also noticed how the interest of the students and the content of my course was shifting gradually and steadily from the traditional morphology taxonomy type to the physiology ecology embryology orientation Students were demanding to know the relevancy of what they had to learn Thus after the ASI on Photoreception and Vision in Invertebrates held in 1982 the question of one on nervous systems was raised by a number of colleagues It appeared then that the consensus was that the time was ripe to hold one and that it will be worthwhile Therefore as usual arrangements had to begin at least two years in advance Most of the persons I contacted to lecture and write chapters on selected topics agreed enthusiastically

Sensory Coding in the mammalian nervous system George

Somjen,2013-04-09 Great advances have been made in the area of sensory physiology during the last few decades and these developments seem to be asking for a comprehensive review that is manageable in size and cohesive in content This volume has been written with that goal in mind In the first place I would like to thank Mr R van Frank of Appleton Century Crofts for asking me to do the job and my wife for persuading me to do it for writing it was an enjoyable task Much of the discussion of factual data set to print here evolved in question and answer sessions in courses given to students in physiology psychology and medicine and to physicians training in neurology neurosurgery and psychiatry Besides my students I had in mind while preparing this text my professional colleagues laboring on their lecture notes under circumstances perhaps not unlike my own The material is divided in two parts The first deals with the manner of representation of sensory information in peripheral nerves the so called first order code The second half of the text deals with the handling of sense data by the central nervous system One reason for dividing the material in this way is that many of the features of the first order code are common to all sensory modalities The intensity the place the rhythm the quality of stimuli are encoded by rules which are applicable albeit with appropriate modifications to all senses Furthermore these rules of coding are today rather well understood

Computational Evolution of Neural and Morphological Development Yaochu Jin,2023-07-14 This book provides a basic yet unified overview of theory and methodologies for evolutionary developmental systems Based on the author's extensive research into the synergies between various approaches to artificial intelligence including evolutionary computation artificial neural networks and systems biology it also examines the inherent links between biological intelligence and artificial intelligence The book begins with an introduction to computational algorithms used to understand and simulate biological evolution and development including evolutionary algorithms gene regulatory network models multi cellular models for neural and morphological development and computational models of neural plasticity Chap 2 discusses important properties of biological gene regulatory systems including network motifs network connectivity robustness and evolvability Going a step further Chap 3 presents methods for synthesizing regulatory motifs from scratch and creating more complex regulatory dynamics by combining basic regulatory motifs using evolutionary algorithms Multi cellular growth models which can be used to simulate either neural or morphological development are presented in Chapters 4 and 5 Chap 6 examines the synergies and coupling between neural and morphological evolution and development In turn Chap 7 provides preliminary yet promising examples of how evolutionary developmental systems can help in self organized pattern generation referred to as morphogenetic self organization highlighting the great potentials of evolutionary developmental systems Finally Chap 8 rounds out the book stressing the importance and promise of the evolutionary developmental approach to artificial intelligence Featuring a wealth of diagrams graphs and charts to aid in comprehension this book offers a valuable asset for graduate students researchers and practitioners who are interested in pursuing a different approach to artificial intelligence

Evolutionary Neuroscience Jon H Kaas,2009-07-28 Evolutionary Neuroscience is a collection of articles in brain

evolution selected from the recent comprehensive reference Evolution of Nervous Systems Elsevier Academic Press 2007 The selected chapters cover a broad range of topics from historical theory to the most recent deductions from comparative studies of brains The articles are organized in sections focused on theories and brain scaling the evolution of brains from early vertebrates to present day fishes amphibians reptiles and birds the evolution of mammalian brains and the evolution of primate brains including human brains Each chapter is written by a leader or leaders in the field and has been reviewed by other experts Specific topics include brain character reconstruction principles of brain scaling basic features of vertebrate brains the evolution of the major sensory systems and other parts of brains what we can learn from fossils the origin of neocortex and the evolution of specializations of human brains The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present day vertebrates This book would be of use to students at the graduate or undergraduate levels as well as professional neuroscientists cognitive scientists and psychologists Together the chapters provide a comprehensive list of further reading and references for those who want to inquire further The most comprehensive authoritative and up to date single volume collection on brain evolution Full color throughout with many illustrations Written by leading scholars and experts

Neurobiological Foundations for EMDR Practice Uri Bergmann, 2012-05-21 This volume introduces the most current research about the neural underpinnings of consciousness and EMDR eye movement desensitization and reprocessing in regard to attachment traumatic stress and dissociation It is the first book to comprehensively integrate new findings in information processing consciousness traumatic disorders of information processing chronic trauma and autoimmune compromises and the implications of these data on the Adaptive Information Processing AIP model and EMDR treatment The text examines online wakeful information processing including sensation perception somatosensory integration cognition memory language and motricity and off line sleep information processing such as slow wave sleep and cognitive memorial processing as well as REM dream sleep and its function in emotional memory processing The volume also addresses disorders of consciousness including coma anesthesia and other neurological disorders particularly disorders of Type 1 PTSD complex PTSD dissociative disorders and personality disorders It delves into chronic trauma and autoimmune function especially in regard to diseases of unknown origin and examines them from the perspective of autoimmune compromises resulting from the unusual neuroendocrine profile of PTSD sufferers The final section integrates all material to illustrate the tenets of the AIP model and the implication of this material with respect to current EMDR treatment as well as techniques to render it more robust Key Features Provides a neurobiological foundation that informs our understanding of human development disorders of attachment and information processing Examines biological underpinnings of EMDR and other psychotherapeutic modalities regarding successful treatment outcomes for attachment stress and dissociation Offers the latest research in neurosciences relevant to attachment traumatic stress and dissociation Explicates disorders as

outcomes of chronically dysregulated evolutionarily based biological action systems Illustrates EMDR's sensorial input to the brain as a neural catalyst that can facilitate repair of dysfunctional neural circuitry Includes illustrative neural maps

Neurobiological Foundations for EMDR Practice, Second Edition Uri Bergmann, 2019-06-01 The second edition of this groundbreaking work incorporates f new neuroscientific and psychological research related to human development traumatic stress disorders of attachment and information processing and its implications for EMDR practice The book delivers critical new neurobiological research on procedural and emotional learning early acquired relational patterns inter corporality and empathy Drawing from contemporary neuroscience s increased understanding of emotions and the significance of mirror neurons the book demonstrates the importance of affective resonance and its effect on neuroplasticity as a prerequisite for any enduring change in cognition behavior and emotion The second edition also examines in further depth the relationship between stress trauma and immune function in regard to immunoinflammatory illnesses and the implications for their treatment An additional 20 syndromes are examined in addition to the 11 syndromes discussed in the first edition New to the Second Edition Delivers groundbreaking neuroscientific and psychological research related to human development traumatic stress attachment disorders and information processing Underscores the importance of emotion as fundamental for change Addresses the dominance of right hemispheric communications that foster procedural and emotional learning Examines the implicit nature of early acquired relational patterns inter corporality and empathy Covers the relationship between stress trauma and immune function regarding immunoflammatory illnesses and their treatment Key Features Provides a neurobiological foundation that informs our understanding of human development attachment disorders and information processing Examines biological underpinnings of EMDR regarding successful treatment outcomes for attachment disorders stress and dissociation Explicates disorders as outcomes of chronically dysregulated evolutionarily based biological action systems Illustrates EMDR's sensorial input to the brain as a neural catalyst that can help to repair dysfunctional neural circuitry Includes illustrative neural maps **Sensory Communication** Walter A.
