Ware,2012-12-06 Global attention in scientific industrial and governmental communities to traces of toxic chemicals in
foodstuffs and in both abiotic and biotic environments has justified the present triumvirate of specialized publications in this
field comprehensive reviews rapidly published progress reports and archival documentations These three publications are
integrated and scheduled to provide in international communication the coherency essential for non duplicative and current
progress in a field as dynamic and complex as environmental contamination and toxicology Until now there has been no
journal or other publication series reserved exclusively for the diversified literature on toxic chemicals in our foods our feeds
our geographical surroundings our domestic animals our wildlife and ourselves Around the world immense efforts and many

talents have been mobilized to technical and other evaluations of nature's local magnitudes, fates and toxicology of the persisting residues of these chemicals loosed upon the world. Among the sequelae of this broad new emphasis has been an inescapable need for an articulated set of authoritative publications where one could expect to find the latest important world literature produced by this emerging area of science together with documentation of pertinent ancillary legislation.

Many individuals and groups need a usable treatment of the methodology required to assess the human health risks caused by toxicant exposure. This need is shared by industrial hygienists, environmental, occupational and public health professionals, toxicologists, epidemiologists, labor unions, attorneys, regulatory officials and manufacturers and users of chemicals. The reader needs only a basic knowledge of biology and algebra in order to utilize the methodology presented. In addition, a basic knowledge of toxicology, epidemiology and statistics is desirable for a full understanding of some aspects of risk assessment. Sophisticated computer programs are not required.
