Radiation-protective Drugs and Their Reaction Mechanisms J. C. Livesey, D. J. Reed, L. F. Adamson, 1985 **Radiation and Human Health** Michael R. Quastel, John R. Goldsmith, 1997 *Biochemical Modulation of Anticancer Agents: Experimental and Clinical Approaches* Frederick A. Valeriote, L.O. Baker, 2012-12-06

Biochemical Modulation at the present time defines an area of study in which the intracellular metabolism of a given anti cancer agent is modulated usually by a noncytotoxic agent or a cytotoxic agent at sufficiently low dosage to make it non cytotoxic in order to either increase the effectiveness of the particular agent against tumor cells or decrease its cytotoxicity against normal cells The major focus of modulation has been the agents 5 fluorouracil FUra arabinofuranosylcytosine ara C methotrexate MTX and a few alkylating agents The major thrust of the studies has been to increase the flow of the anticancer agent along the pathway responsible for the formation of the cytotoxic species for example FUra to FUTP or ara C to ara CTP While in most cases the application of research results to clinical trials does not require the subsequent expertise of the laboratory researchers application of biochemical modulatory schemes to clinical protocols necessitate a dramatic break with the past procedures As shown in the laboratory clinical loop below close collaboration between the laboratory and clinical investigator is essential While the laboratory REDEFINE TECHNOLOGY TESTS OR QUESTIONS FOR FURTHER THERAPEUTIC ADVANCE CLINICAL EXPERIMENTAL PROTOCOL LABORATORY RESEARCH STUDIES DEFINE AND TEST APPROPRIATE SCIENTIFIC PARAMETERS results define rationally based regimens it is essential that the clinical protocols contain the requirement that clinical material either tumor or normal tissues be sampled to determine whether the biochemical modulation being proposed is in fact being accomplished *Radioprotectors* Edward A. Bump, Kamal Malaker, 2021-12-24 It is essential to minimize damage to normal tissues during radiation therapy and many strategies have been employed in finding the best methods for radioprotection This book integrates chemical biological and clinical perspectives on these strategies and developments providing a comprehensive treatise It emphasizes new concepts in radioprotection aiming to inspire further basic science and clinical progress in radioprotector research Radioprotectors Chemical Biological and Clinical Perspectives includes the following topics Early research on radioprotectors WR 2721 an aminothiols prodrug as a radioprotector New results with naturally occurring thiols Nitroxides as effective radioprotectors in vitro and in vivo Radioprotection observed with radical scavengers or antioxidants Bone marrow radioprotection with cytokines and biological modifiers Multiple mechanisms of altering radiation response by eicosanoids Vascular response to radiation and the importance of vascular damage to normal tissue Modifiers of radiation induced apoptosis Survey of clinical trials with radioprotectors Radiation biologists and oncologists cancer researchers and toxicologists will benefit from the findings discussed and strategies for future research Environmental Health Perspectives ,1993 *Research Grants Index* National Institutes of Health (U.S.). Internal Dosimetry in Nuclear Medicine Michael G. Stabin,2016-10-14 Written by one of the world s leading experts in
 the field of nuclear medicine dosimetry this text describes in detail the use of internal dose calculations in the practice of
 nuclear medicine While radiation therapy with external sources of radiation always employs calculations of dose to optimize
 therapy for each patient this is not routinely conducted in nuclear medicine therapy As the trend towards an increasing role
 of dosimetry in therapy planning increases this book reviews the available methods and technologies available to make this a
 more common practice The book begins by covering the mathematical fundamentals of internal dose calculations and uses
 sample calculations to demonstrate key principles The book then moves forward to describe anthropomorphic models
 dosimetric models and types and uses of diagnostic and therapeutic radiopharmaceuticals The depth of coverage makes it
 useful reference and guide for researchers performing dose calculations and for physicians considering incorporating dose
 calculations into the treatment of their cancer patients Communist Chinese Scientific Abstracts United States. Joint
