Radionuclides In Therapy:

Targeted Radionuclide Therapy Tod W. Speer, 2010-11-15 Offering an overview of radioimmunotherapy this book represents a comprehensive amalgamation of the radiation physics chemistry radiobiology tumor models and clinical data for targeted radionuclide therapy

Radionuclides in Therapy Richard P. Spencer, 1987-08-31 *Locoregional Radionuclide Cancer Therapy* Franklin C.L. Wong, 2020-12-08 This book reviews locoregional radionuclide cancer therapies LRCT Proving an increasingly viable alternative to radiotherapy radionuclide therapy includes a diversity of choices of well characterized biochemical and physiologic target molecules The delivery and retention of radionuclides may be monitored by advanced imaging for exact tissue localization and for real time dosimetry to enable personalized precision medicine

Radiopharmaceuticals in human cancer therapies are typically delivered in systemic routes but can also be designed for locoregional routes to harness pharmacokinetic advantages of higher payload and lower systemic toxicities This book explores the latest advancements and clinical considerations of the locoregional approach Throughout the chapters the clinical and scientific bases of cancer treatment and the locoregional use of radionuclides are explored Mathematical models of radiation dosimetry of locoregional radionuclides on tissues are studied using common models for multiple commercially available radionuclides Rodent and canine tumor models of LRCT are compared for selected radionuclides and radiopharmaceuticals The practical aspects of radiopharmaceuticals production marketing transport as well as radiation protection are reviewed Finally the combination of LRCT with immunotherapy and other cancer therapies and prospective future use of LRCT are discussed This is a guide for practicing nuclear physicians interventional radiologists radiation oncologists radiation scientists veterinarians and oncologists to expand their knowledge base and to prepare for designing locoregional radionuclide cancer therapies in animals and in humans

Targeted Radionuclide Tumor Therapy Torgny Stigbrand, Jorgen Carlsson, Gregory P. Adams, 2008-09-01 The last three decades have provided opportunities to explore the potential of treating malignant diseases with antibodies or other targeting molecules labelled with nuclides While considerable advances have been reported there is still a significant amount of work left to accomplish before our ambitions can be achieved It now seems timely to review the accomplishments achieved to date and to clarify the challenges that remain The choice of radionuclide the conjugation procedure employed and the selection of suitable targets were early issues that were faced by our field that still persist however we can now tackle these obstacles with significantly better insight The expanding array of new targeting molecules recombinant antibodies peptides and agents based upon alternate scaffolds may increase the therapeutic efficacy or even modify the radiation sensitivity of the targeted tumor cell The title of this book Targeted Radionuclide Tumour Therapy

Biological Aspects was selected to reinforce the concept that a major focus of this volume was devoted to understanding the biological effects of targeting and radiation. These important issues have not previously been the primary focus in this context. Furthermore, our rapidly expanding knowledge of different types of cell death and the increasingly likely existence of cancer stem cells suggests to us that even more efficient approaches in targeting might be possible in the future. *Theranostics, Gallium-68, and Other Radionuclides* Richard P. Baum, Frank Röscher, 2012-08-23. This book is based on contributions presented at the 1st World Congress on Gallium 68 and Peptide Receptor Radionuclide Therapy which examined recent developments in theranostics, the emerging field of molecular targeting of vectors that can be used for both diagnosis and therapy when modified accordingly. The focus of this book is on the rapidly developing research into and clinical applications of gallium 68 and other generator-produced PET radionuclides in the personalized diagnosis and treatment of neuroendocrine tumors and other diseases. In addition, new PET radiopharmaceuticals are considered and the latest ideas and concepts presented. Theranostics embodies both molecular and personalized medicine. It is at the cutting edge of medicine and the contents of this volume will be of interest to chemists, physicians and investigators dealing with generators. PET radiochemistry, molecular imaging and radionuclide therapy. **Radionuclide Peptide Cancer Therapy** Marco Chinol, Giovanni Paganelli, 2016-04-19. Offering lower toxicity and higher accuracy than conventional therapies, this source offers illustrative coverage of this new method to treat tumors associated with brain, breast, lung and neuroendocrine cancers. Accompanied by a CD offering color images, radiolabeling procedures and tips on radiopharmaceutical administration, this source will offer. Therapeutic Nuclear Medicine Richard P. Baum, 2014-08-16. The recent revolution in molecular biology offers exciting new opportunities for targeted radionuclide therapy. This up-to-date comprehensive book, written by world-renowned experts, discusses the basic principles of radionuclide therapy, explores in detail the available treatments, explains the regulatory requirements and examines likely future developments. The full range of clinical applications is considered, including thyroid cancer, hematological malignancies, brain tumors, liver cancer, bone and joint disease and neuroendocrine tumors. The combination of theoretical background and practical information will provide the reader with all the knowledge required to administer radionuclide therapy safely and effectively in the individual patient. Careful attention is also paid to the role of the therapeutic nuclear physician in coordinating a diverse multidisciplinary team which is central to the safe provision of treatment. **Management of Radionuclide Therapy Patients** Ncrp, 2014-05-14. **Medical Radionuclides: Radiation Dose and Effects** Roger J. Diagnostic Nuclear Medicine and Radionuclide Therapy Stefano Fanti,Egesta Lopci,2016-05-20 Nuclear medicine is a medical imaging specialty involving the use of radioactive compounds for diagnostic and therapeutic purposes As a medical branch it is considered part of Diagnostic Imaging but differs substantially from Radiology with respect to the source of the radiation made visible by the diagnostic devices Nuclear medicine adopts also some types of radioactive emissions for therapeutic purposes allowing the employment of the metabolic properties of the radiopharmaceuticals for the cure of certain clinical conditions and malignant diseases Nuclear medicine is a relatively recent discipline and owes its origins to the discovery of natural radioactivity and the development of the first instruments for medical diagnostics From the introduction of the first gamma camera of Anger the technology has greatly improved The evolution has led to the development of SPECT and PET technology and in the recent years to the introduction of hybrid tomographs allowing the combination in one session of both functional and morphological images The purpose of this textbook is to illustrate synthetically the principals of nuclear medicine diagnostics with reference both to the technical part and main clinical indications The booklet is addressed primarily to the degree courses for technologists but can be reasonably used in other courses and medical training programs where there is necessity for relatively simple yet complete and clinically relevant concepts of nuclear medicine discipline As a complement the manuscript will end with a dedicated section summarizing some concepts of nuclear medicine therapy

The Evolution of Radionanotargeting towards Clinical Precision Oncology: A Festschrift in Honor of Kalevi Kairemo Antti Jekunen,2022-03-10 The Evolution of Radionanotargeting towards Clinical Precision Oncology is a remarkable book honoring Professor Kalevi Kairemo who is known among academic and medical circles as a pioneer in novel radiolabeled therapeutics This festschrift provides an overview of key advances in the field of radionanotargeting and the directions for future development in patient care Prof Kairemo s research is based on multiomics which involves multiple elements genomics transcriptomics proteomics metabolomics microbiomics epigenomics exposome imaging and precision medicine which is reflected by the unique collection of articles presented The articles start from the angle of radionanotargeting and theragnostics leading to imaging and therapy which includes sections for thyroid cancer head and neck cancer genitourinary cancers and neuroendocrine neoplasms Theragnostics nanoparticles and precision oncology have also been covered in their own segments while also giving a glimpse of research in metabolic imaging cardiovascular radionuclide imaging and bone therapies The sequence of chapters demonstrates how through Professor Kairemo s efforts radionanotargeting has evolved to a practice changing therapeutic approach in the clinic particularly in oncology Finally Professor Kairemo s own memoir Seven decades in health care and memoirs from colleagues including a personal introduction to him with a photographic cavalcade reveals the world of a multitasking person with a multidisciplinary approach to science that ushered his development of significant expertise across the fields of chemistry

biology engineering physics and clinical medicine This book is excellent for medical historians trainees and specialists in clinical and radiological oncology in expanding their understanding of the role of radionuclide imaging over the years making it an ideal tribute that belongs in the library of anyone involved in the field **Yttrium-90 and Rhenium-188**

Radiopharmaceuticals for Radionuclide Therapy International Atomic Energy Agency,2015-02-17

Radiopharmaceuticals for Therapy F. F. (Russ) Knapp,Ashutosh Dash,2016-01-20 This book provides detailed information on therapeutic radiopharmaceuticals and discusses emerging technologies which have potential for broad clinical implementation Recent advances in molecular biology radiopharmaceutical chemistry and radioisotope production have stimulated a new era for the use of radiopharmaceuticals for targeted radionuclide therapy TRT Emerging clinical trials include use of peptides and monoclonal antibodies radiolabeled with therapeutic radionuclides for cancer therapy In addition small molecules are used for the treatment of chronic diseases such as metastatic bone pain palliation and radiation synovectomy of inflammatory joints In the interventional arena therapy of primary and metastatic liver cancer and arterial restenosis following angioplasty of both the coronary and peripheral arteries are being explored Reactor and accelerator production of therapeutic radioisotopes is also integrated into these discussions The development and use of radiopharmaceutical targeting characteristics required for treatment of specific disease processes and how these are implemented for radiopharmaceutical design strategies are also described Radiopharmaceuticals for Therapy will benefit audiences in nuclear medicine and radionuclide therapy and will thus prove an invaluable source of up to date information for students radiopharmaceutical scientists and professionals working in the radiopharmacy and nuclear medicine specialties
