Reducing the Risks of Nonstructural Earthquake Damage Robert Reitherman, 1983 **Reducing the Risks of Nonstructural Earthquake Damage** U. s. Department of Homeland Security, Federal Emergency Management Agency, 2013-04-02 Nonstructural failures have accounted for the majority of earthquake damage in several recent U S earthquakes Thus it is critical to raise awareness of potential nonstructural risks the costly consequences of nonstructural failures and the opportunities that exist to limit future losses Nonstructural components of a building include all of those components that are not part of the structural system that is all of the architectural mechanical electrical and plumbing systems as well as furniture fixtures equipment and contents Windows partitions granite veneer piping ceilings air conditioning ducts and equipment elevators computer and hospital equipment file cabinets and retail merchandise are all examples of nonstructural components that are vulnerable to earthquake damage The primary purpose of this guide is to explain the sources of nonstructural earthquake damage and to describe methods for reducing the potential risks in simple terms This guide is intended for use by a non engineer audience located within the United States this audience includes

building owners facility managers maintenance personnel store or office managers corporate or agency department heads business proprietors risk managers and safety personnel The guide is also designed to be useful for design professionals especially those who are not experienced with seismic protection of nonstructural components It addresses nonstructural issues typically found in schools office buildings retail stores hotels data centers hospitals museums and light manufacturing facilities FEMA 74 explains the sources of earthquake damage that can occur in nonstructural components and provides information on effective methods for reducing risk associated with nonstructural earthquake damage It is intended for use by a non engineer audience that includes building owners facility managers maintenance personnel store or office managers corporate or agency department heads and homeowners The reference material contained within the third edition of FEMA 74 is now approaching 20 years old A considerable amount of new information now exists as a result of ongoing National Earthquake Hazard Reduction Program NEHRP activities local and state government programs private sector initiatives and academic work focused on reducing the potential for nonstructural earthquake damage Reducing Risks of Nonstructural Earthquake Damage United States. Timothy J. Walsh,William J. Kockelman,George R. Priest,1996 Architectural Glass to Resist Seismic and Extreme Climatic Events

Richard A. Behr,2009-09-14 Glass is a popular cladding material for modern buildings The trend for steel framed glass clad buildings instead of those using traditional materials such as brick and concrete has inherent problems These include for example the performance of architectural glass in extreme climatic events such as windstorms and heavy snow loads and also during earthquakes This book reviews the state of the art in glass and glazing technology to resist failure due to these natural events Building code seismic requirements for architectural glass in the United States are considered first of all followed by a chapter on glazing and curtain wall systems to resist earthquakes The next two chapters discuss snow loads on building envelopes and glazing systems and types and design of glazing systems to resist snow loads Wind pressures and the impact of wind borne debris are then considered in the next group of chapters which also review special types of glazing systems to resist windstorms A final chapter reviews test methods for the performance of glazing systems during earthquakes and extreme climatic events With its distinguished editor and team of contributors Architectural glass to resist seismic and extreme climatic events is an essential resource for architects structural civil and architectural engineers researchers and those involved in designing and specifying building glazing and cladding materials in areas where severe windstorms snow and earthquakes are a threat Considers the state of the art in glass and glazing technology to resist failure due to extreme climatic events Reviews specific building techniques and test methods to enhance glazing performance during snow storms wind storms and earthquakes
