A Theory of Phonological Features San Duanmu, 2016 This book outlines a system of phonological features that is minimally sufficient to distinguish all consonants and vowels in the languages of the world The extensive evidence is drawn from datasets with a combined total of about 1000 sound inventories The interpretation of phonetic transcriptions from different languages is a long standing problem In this book San Duanmu proposes a solution that relies on the notion of contrast X and Y are different

sounds if and only if they contrast in some language He focuses on a simple procedure to interpret empirical data for each phonetic dimension all inventories are searched in order to determine the maximal number of contrasts required In addition every unusual feature or extra degree of contrast is re examined to confirm its validity The resulting feature system is surprisingly simple fewer features are needed than previously proposed and for each feature a two way contrast is sufficient Nevertheless the proposal is reliable in that the notion of contrast is uncontroversial the procedure is explicit and the result is repeatable The book also offers discussion of non contrastive differences between languages sound classes and complex sounds such as affricates consonant glide units consonant liquid units contour tones pre nasalized stops clicks ejectives and implosives

An Introduction to Linguistic Typology Viveka Velupillai,2012 Offers an introduction to linguistic typology that covers various linguistic domains from phonology and morphology over parts of speech the NP and the VP to simple and complex clauses pragmatics and language change This title also includes a discussion on methodological issues in typology **Basic Word Order (RLE Linguistics B: Grammar)** Russell S Tomlin,2014-02-03 This book examines the frequencies of the six possible basic word or constituent orders SOV SVO VSO VOS OSV OVS provides a typologically grounded explanation for those frequencies in terms of three independent functional principles of linguistic organization From a database of nearly 1 000 languages and their basic constituent orders a sample of 400 languages was produced that is statistically representative of both the genetic and areal distributions of the world's languages This sample reveals the following relative frequencies in order from high to low of basic constituent order types 1 SOV and SVO 2 VSO 3 VOS and OVS 4 OSV It is argued that these relative frequencies can be explained to be the result of the possible interactions of three fundamental functional principles of linguistic organization Principle 1 the thematic information principle specifies that initial position is the cross linguistically favoured position for clause level thematic information Principle 2 the verb object bonding principle describes the cross linguistic tendency for a transitive verb and its object to form a more tightly integrated unit syntactically and semantically than does a transitive verb and its subject Principle 3 the animated principle describes the cross linguistic tendency for semantic arguments which are either more animate or more agentive to occur earlier in the clause Each principle is motivated independently of the others drawing on cross linguistic data from more than 80 genetically and typologically diverse languages Given these three independently motivated functional principles it is argued that the relative frequency of basic constituent order types is due to the tendency for the three principles to be maximally realized in the world's languages SOV and SVO languages are typologically most frequent because such basic orders reflect all three principles The remaining orders occur less frequently because they reflect fewer of the principles The 1 000 language database and the genetic and areal classification frames are published as appendices to the volume **Materials for the**

Predication and Adverbial Modification Nikolaus P. Himmelmann, Eva F. Schultze-Berndt, 2006-09-28 Depictive secondary predicates such as raw in George ate the fish raw are central to current issues in syntactic and semantic theory in particular predication theory phrase structure theories issues of control and grammatical relations and verbal aspect This is the first book to approach depictive secondary predication from a cross linguistic perspective It describes all the relevant phenomena and brings together critical surveys and new contributions on their morphosyntactic and semantic properties It considers similarities and differences between secondary predicates and other types of adjuncts including adverbials of manner comparison quantity and location The authors are leading scholars with a first hand knowledge of the languages they discuss Their approach is theory neutral and pragmatic they draw on insights and research traditions ranging from the minimalist program to semantic maps methodology The book will interest scholars working on the semantics or syntax of secondary predicates adverbials and the role of agreement and other morphological marking It has been designed for use in advanced syntax and typology classes **Finiteness** Irina Nikolaeva, 2007-04-06 This book explores the nature of finiteness one of

most commonly used notions in descriptive and theoretical linguistics but possibly one of the least understood Scholars representing a variety of theoretical positions seek to clarify what it is and to establish its usefulness and limitations In doing so they reveal cross linguistically valid correlations between subject licensing subject agreement tense syntactic opacity and independent clausehood show how these properties are associated with finiteness and discuss what this means for the content of the category The issues explored include how different grammatical theories represent finiteness whether the finite nonfinite distinction is universal whether there are degrees of finiteness whether the syntactic notion of finiteness has a semantic corollary whether and how finiteness is subject to change and how finiteness features in language acquisition Irina Nikolaeva opens the book by describing the history of finiteness and its place in current thinking and research She then introduces the chapters of the book comparing the authors perspectives and showing what they have in common The book is then divided into four parts Part I considers the role finiteness plays in formal syntactic theories and Part II its deployment in functional theories and as the subject of research in typology Parts III and IV look respectively at the finite nonfinite opposition in individual languages and at the role finiteness plays in linguistic change and linguistic development The book is written and structured to appeal to scholars and students of syntax and general linguistics at graduate level and above

Grammatical Agreement in Hindi-Urdu and Its Major Varieties Pradeep Kumar Das, 2006 **The Evolution of**

Grammar Joan Bybee, Revere Perkins, William Pagliuca, 1994-11-15 Joan Bybee and her colleagues present a new theory of the evolution of grammar that links structure and meaning in a way that directly challenges most contemporary versions of

generative grammar This study focuses on the use and meaning of grammatical markers of tense aspect and modality and identifies a universal set of grammatical categories The authors demonstrate that the semantic content of these categories evolves gradually and that this process of evolution is strikingly similar across unrelated languages Through a survey of seventy six languages in twenty five different phyla the authors show that the same paths of change occur universally and that movement along these paths is in one direction only This analysis reveals that lexical substance evolves into grammatical substance through various mechanisms of change such as metaphorical extension and the conventionalization of implicature Grammaticization is always accompanied by an increase in frequency of the grammatical marker providing clear evidence that language use is a major factor in the evolution of synchronic language states The Evolution of Grammar has important implications for the development of language and for the study of cognitive processes in general
