Canadian Issues in Environmental Ethics Wesley Cragg, Allan Greenbaum, Alex Wellington, 1997-06-10 Is it possible to design a forest policy that satisfies ethical and environmental concerns and is acceptable to business labour and First Nations representatives What is the best path through the tangle of ethical issues surrounding the collapse of the east coast fishery What sort of obligations does a rich nation such as Canada have to satisfy the claims of global environmental justice These are the sorts of issues in applied ethics that are tackled in this collection of essays the vast majority of which have been written especially for this volume It is the first Canadian collection of its kind The book is divided in to sections detailing with such topics as the environment and the economy ethical issues relating to non human animals issues of gender and issues relating to native peoples Most of the authors are philosophers though specialists in geography geology and the social sciences are also among the contributors Frequent reference is made to theoretical ethical concerns but the focus throughout is on applied ethics and a variety of case studies are included Examples include essays on animal rights and the case of native hunters surface mining in Northern Ontario the Quebec arctic and fishing communities in the Maritimes Comparisons are frequently drawn to policies and ethical questions arising in other countries most prominently the United States

citizenship future generations and sustainability key issues pollution population energy food water mass extinction technology and ecosystem management climate change mitigation adaptation diplomacy and geoengineering and social change conflict pragmatism sacrifice and action Each chapter explains the role played by central theories ideas issues and concepts in contemporary environmental ethics and their relevance for the challenges of the future **Ethics of the Global Environment** Robin Attfield, 2015-02-12 This fully updated and expanded textbook looks at issues including climate change sustainable development and biodiversity preservation and sensitively addresses global developments such as the Summits at Durban on climate and at Nagoya on biodiversity **International Environmental Law, Policy, and Ethics** Alexander Gillespie, 2014-08-21 This second edition of International Environmental Law Policy and Ethics revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy **Sustainability** David Mollica, 2017-03-02 Sustainability is one of the key concepts underlying our thinking about corporate responsibilities particularly with respect to the environment and inter generational justice but also in relation to corporate governance and the long term economic viability The advantages of the discourse of Sustainability are that it brings together contemporary economic and moral imperatives in the context of scientific knowledge Its disadvantages relate to its open ended content its systematic ambiguity and the internal tensions between economic growth human survival and global justice The essays in this volume reflect these strengths and weaknesses from a variety of viewpoints economic scientific social and philosophical They illustrate and illuminate the varied and contested content and utility of this currently popular concept and point to its

multiple implications for the development of corporate responsibilities **Altering Nature** B. A. Lustig, B.A. Brody, Gerald P. McKenny, 2008-07-15 B Andrew Lustig Baruch A Brody and Gerald P McKenny Nearly every week the general public is treated to an announcement of another actual or potential breakthrough in biotechnology Headlines trumpet advances in assisted reproduction current or prospective experiments in cloning and developments in regenerative medicine stem cell technologies and tissue engineering Scientific and popular accounts explore the perils and the possibilities of enhancing human capacities by computer based biomolecular or mechanical means through advances in artificial intelligence genetics and nanotechnology Reports abound concerning ever more sophisticated genetic techniques being introduced into agriculture and animal husbandry as well as efforts to enhance and protect biodiversity Given the pace of such developments many insightful commentators have proclaimed the 21st century as the biotechnology century Despite a significant literature on the morality of these particular advances in biotechnology deeper ethical analysis has often been lacking Our preliminary review of that literature suggested that current discussions of normative issues in biotechnology have suffered from two major deficiencies First the discussions have been too often piecemeal in character limited to after the fact analyses of particular issues that provoked the debate and unconnected to larger concepts and themes Second a crucial missing element of those discussions has been the failure to reflect explicitly on the diverse disciplinary conceptions of nature and the natural that shape moral judgments about the legitimacy of specific forms of research and their applications *Language, Mind, and Art* D. Jamieson, 2013-03-09 This book is a collection of essays in honor of Paul Ziff written by his colleagues students and friends Many of the authors address topics that Ziff has discussed in his writings understanding rules and regularities proper names the feelings of machines expression and aesthetic experience Paul Ziff began his professional career as an artist went on to study painting with J M Hanson at Cornell and then studied for the Ph D in philosophy also at Cornell with Max Black Over the next three decades he produced a series of remarkable papers in philosophy of art culminating in 1984 with the publication of *Antiaesthetics* An Appreciation of the Cow with the Subtle Nose In 1960 he published *Semantic Analysis* his masterwork in philosophy of language Throughout his career he made important contributions to philosophy of mind in such papers as *The Simplicity of Other Minds* 1965 and *About Behaviourism* 1958 In addition to his work in these areas his lectures at Harvard on philosophy of religion are an underground classic and throughout his career he has continued to make art and to search for the meaning of life in the properties of prime numbers Although his interests are wide and deep questions about language art and mind have dominated his philosophical work and it is problems in these areas that provide the topics of most of the essays in this volume Changing Stocks, Flows and Behaviors in Industrial Ecosystems Matthias Ruth, Brynhildur Davidsdottir, 2009-01-01 This book marks an important contribution by Matthias Ruth and Brynhildur Davidsdottir to the developing literature that seeks to integrate our understanding of physical and environmental systems the built human environment economics and complexity It is a valuable resource for anyone

Seckinelgin,2005-11-17 This new study shows how environmental issues represent a deep problem in conceptualising the relationship between human beings and nature This key relationship grounds the implicit ethical and political concerns of International Relations and our understandings of environmental politics It demonstrates that the core theoretical orientations of the study of International Relations are not only incapable of understanding and responding to contemporary

problems but are profoundly complicit in creating the ecological problems in the first place This major book develops a sense of these realities based on the thinking of Martin Heidegger It forwards new ways of rethinking the environmental questions and addresses crucial issues such as sovereignty the International Law of The Sea the Kyoto Protocol Northern Alaskan oil exploration and exploitation and the impact of the United Nations Convention on the Law of The Sea III This is essential specialist reading for readers concerned with the environment

The Ethics of Nanotechnology, Geoengineering, and Clean Energy Andrew Maynard, Jack Stilgoe, 2020-07-26 Nanotechnology clean technology and geoengineering span the scale of human ingenuity from the imperceptibly small to the unimaginably large Yet they are united by a commonality of ethics that permeates how and why they are developed and how the resulting consequences are managed The articles in this volume provide a comprehensive account of current thinking around the ethics of development and use within each of the technological domains and addresses challenges and opportunities that cut across all three In particular the collection provides unique insights into the ethics of noumenal technologies technologies that are impossible to see or detect or conceive of with human senses or conventional tools This collection will be of relevance to anyone who is actively involved with ensuring the responsible and sustainable development of nanotechnology geoengineering or clean technology

Ethics and Justice for the Environment Adrian C. Armstrong, 2012 Examining the issues of ethics and justice as they apply to the environment this book starts from the observation that the parallel expositions of environmental ethics and environmental justice appear to have few points of contact Environmental justice is highly politicized and concerned with human access to the environment and the unequal exposure to environmental pollution It grew out of the US civil rights movement the liberal tradition of rights and Rawls description of justice as fairness It is thus almost exclusively anthropocentric and does not address the question of justice for the environment By contrast environmental ethical studies are a wide ranging collection of approaches that are concerned with caring for the earth and the justifications for it but rarely consider the issue of justice Although the two movements do not come together at the theoretical level they do so at the grass roots activist level An essential component of this study is thus to consider both the issues of grass roots action and the application of the methods to actual case studies This book finds a common ground between these two strands and so to develop a unified statement of justice for the environment that includes the insights of both approaches particularly based on the capability ideas of justice developed by Martha Nussbaum

Here For Our Children's Children? Adrian C. Armstrong, 2016-04-05 This study reviews the many different bases for wanting to preserve the environment By seeing how protagonists approach the same situation from different assumptions some of the origins of environmental conflict may be established and ways of resolving conflict can be identified There are two major issues in environmental ethics The first asks whether the problems can be solved within current approaches or require instead lifestyle changes for the whole of western civilisation The second issue concerns why the environment should be valued This review identifies a series in increasingly

stronger valuations that can be identified as 1 Hedonistic we protect the environment because we like it 2 Utilitarian the environment is valuable to us 3 Consequentialist we want to preserve things for other people now or future 4 Intrinsic The environment has virtue in its own right 5 Extrinsic we value the environment because it is of consequence to some thing else theistic a God Thirdly these insights are used to explore potential ways of resolving environmental conflicts notably by the recovery of democratic decision making at the right scale local national or even global

Positional Analysis for Sustainable Development Judy Brown, Peter Soderbaum, Malgorzata Dereniowska, 2017-05-18 Climate change biodiversity loss pollution of land and water land use changes lack of equality and other problems at local national and global levels represent a challenge for economics as a social science Mainstream neoclassical economics may be able to contribute to a more sustainable society but it has also played a dominant role in a period where problems have been aggravated A pluralist and democratic view of economics is therefore very much warranted This book presents a multidimensional and ideologically more open view of economics understanding economics in multidimensional terms is in accordance with the 17 sustainable development goals recognized by nations at the UN level in 2015 Accordingly approaches to decision making and accounting at the national and business levels have to be reconsidered Neoclassical Cost Benefit Analysis CBA with focus on the monetary dimension and an assumed consensus about a specific market ideology to be applied is not compatible with democratic societies where citizen and actors in other roles normally differ with respect to ideological orientation Environmental Impact Statements and Multi Criteria methods are used to some extent to broaden approaches to decision making In this book Positional Analysis is advocated as a multidimensional and ideologically open approach Positional Analysis is based on a political economic conceptual framework as part of ecological economics that differs from neoclassical ideas of individuals firms and markets And since approaches to decision making and to accounting are closely connected a new theoretical perspective in economics similarly raises issues of how national and business accounting can be opened up to meet present demands among various actors in society This perspective raises also numerous ethical questions at the science and policy interface that need to be properly addressed for sustainability decision making
