Stable Processes and Related Topics Cambanis,2012-12-06 The Workshop on Stable Processes and Related Topics took place at Cornell University in January 9 13 1990 under the sponsorship of the Mathematical Sciences Institute It attracted an international roster of probabilists from Brazil Japan Korea Poland Germany Holland and France as well as the U S This volume contains a sample of the papers presented at the Workshop All the papers have been refereed Gaussian processes have been studied extensively over the last fifty years and form the bedrock of stochastic modeling Their importance stems from the Central Limit Theorem They share a number of special properties which facilitates their analysis and makes them particularly suitable to statistical inference The many properties they share however is also the seed of their limitations What happens in the real world away from the ideal Gaussian model The non

Gaussian world may contain random processes that are close to the Gaussian. What are appropriate classes of nearly Gaussian models and how typical or robust is the Gaussian model amongst them? Moving further away from normality, what are appropriate non-Gaussian models that are sufficiently different to encompass distinct behavior yet sufficiently simple to be amenable to efficient statistical inference? The very Central Limit Theorem, which provides the fundamental justification for approximate normality, points to stable and other infinitely divisible models. Some of these may be close to and others very different from Gaussian models.

Probability in Banach Spaces 7 Eberlein, Külbs, Marcus, 2012-12-06. The first international conference on Probability in Banach Spaces was held at Oberwolfach, West Germany, in 1975. It brought together European researchers who, under the inspiration of the Schwartz Seminar in Paris, were using probabilistic methods in the study of the geometry of Banach spaces; a rather small number of probabilists who were already studying classical limit laws on Banach spaces; and a larger number of probabilists, specialists in various aspects of the study of Gaussian processes whose results and techniques were of interest to the members of the first two groups. This first conference was very fruitful. It fostered a continuing relationship among 50 to 75 probabilists and analysts working on probability on infinite dimensional spaces, the geometry of Banach spaces, and the use of random methods in harmonic analysis. Six more international conferences were held since the 1975 meeting. Two of the meetings were held at Tufts University, one at Sønderborg, Denmark, and the others at Oberwolfach. This volume contains a selection of papers by the participants of the Seventh International Conference held at Oberwolfach, West Germany, June 26–July 2, 1988. This exciting and provocative conference was attended by more than 50 mathematicians from many countries. These papers demonstrate the range of interests of the conference participants. In addition to the ongoing study of classical and modern limit theorems in Banach spaces, a branching out has occurred among the members of this group.

Subject Guide to Books in Print, 1996. Further Developments in Fractals and Related Fields Julien Barral, Stéphane Seuret, 2013-02-20. This volume, following in the tradition of a similar 2010 publication by the same editors, is an outgrowth of an international conference Fractals and Related Fields II held in June 2011. The book provides readers with an overview of developments in the mathematical fields related to fractals, including original research contributions as well as surveys from many of the leading experts on modern fractal theory and applications. The chapters cover fields related to fractals such as geometric measure theory, ergodic theory, dynamical systems, harmonic and functional analysis, number theory, probability theory. Further Developments in Fractals and Related Fields is aimed at pure and applied mathematicians working in the above mentioned areas as well as other researchers interested in discovering the fractal domain. Throughout the volume, readers will find interesting and motivating results as well as new avenues for further research.

Journal of the American Statistical Association, 1987. Sums, Trimmed Sums and Extremes Hahn, 2012-12-06. The past decade has seen a resurgence of interest in the study of the asymptotic behavior of sums formed from an independent sequence of random variables. In particular, recent attention has focused on the interaction

of the extreme summands with and their influence upon the sum As observed by many authors the limit theory for sums can be meaningfully expanded far beyond the scope of the classical theory if an intermediate portion i.e. an unbounded number but a vanishingly small proportion of the extreme summands in the sum are deleted or otherwise modified trimmed The role of the normal law is magnified in these intermediate trimmed theories in that most or all of the resulting limit laws involve variance mixtures of normals The objective of this volume is to present the main approaches to this study of intermediate trimmed sums which have been developed so far and to illustrate the methods with a variety of new results The presentation has been divided into two parts Part I explores the approaches which have evolved from classical analytical techniques condition in Fourier methods symmetrization triangular array theory Part II is based on the quantile transform technique and utilizes weak and strong approximations to uniform empirical process The analytic approaches of Part I are represented by five articles involving two groups of authors

Probability in Banach Spaces 6 Haagerup, 2012-12-06 This volume contains a selection of papers by the participants of the 6 International Conference on Probability in Banach Spaces Sandbjerg Denmark June 16-21 1986 The conference was attended by 45 participants from several countries One thing makes this conference completely different from the previous five ones namely that it was arranged jointly in Probability in Banach spaces and Banach space theory with almost equal representation of scientists in the two fields Though these fields are closely related it seems that direct collaboration between researchers in the two groups has been seldom It is our feeling that the conference where the participants were together for five days taking part in lectures and intense discussions of mutual problems has contributed to a better understanding and closer collaboration in the two fields The papers in the present volume do not cover all the material presented in the lectures several results covered have been published elsewhere The sponsors of the conference are The Carlsberg Foundation The Danish Natural Science Research Council The Danish Department of Education The Department of Mathematics Odense University The Department of Mathematics Aarhus University The Knudsen Foundation Odense Odense University The Research Foundation of Aarhus University The Thborg Foundation The participants and the organizers would like to thank these institutions for their support The Organizers
